

Other Building Improvements

The feasibility of adding two storage buildings, one at the top of the ski hill for snow making equipment and a second located along Kenwood Avenue near the new parking lot for storage of the snow groomer will be evaluated.

Sport Court Area Improvements

The sport court area and upper walk-out level of the new Nordic / sport court building make this area very suitable for “Day Camp” purposes. The balance of sod areas and addition of a small area of hard surfaces will enable youth and Park users to be outside sooner after rain events and add a greater number of uses during a variety of weather conditions.

The proposed Nordic/sport court building will be located adjacent to the multi-use sports field and the sport court area. The split level building will serve both the field from the lower level and the sport court from the upper level. Patios will extend from each entry and connecting sidewalks will link accessible parking to the structure. The building will meet the City’s goal of achieving LEED® silver status. (Figure #15) Removal of the existing storage building (being used as a “Day Camp”) will also allow for additional parking.
