Minnesota Slip Bridge Operational

[Duluth, MN] - The City thanks the public for their patience as staff have had to tend to several repair issues for the Minnesota Slip Bridge in Canal Park in the past week. City staff were successful in identifying the electrical malfunctions and making the Bridge operational again.

Built in 1991, the Minnesota Slip Bridge has had challenges in maintaining consistent operations but the City has been diligent in monitoring and making improvements to the Slip Bridge to reduce disruptions in operations. The City of Duluth continually strives to provide efficient water vessel and pedestrian mobility in the Canal Park business district.
