Fisher® ED, EAD, and EDR Sliding-Stem Control Valves

Fisher ED, EAD, and EDR single-port control valves shown in figures 1, 2, and 3 have balanced valve plugs, cage guiding, and metal-to-metal seating for all general applications over a wide range of process pressure drops and temperatures. These general purpose, sliding-stem valves are used for either throttling or on-off control of a wide variety of liquids and gases.

The Fisher ED product line is available for a wide range of applications, including sulfide and chloride stress-cracking environments common to the oil and gas production industries. To discuss available constructions, contact your Emerson Process Management sales office and include the applicable codes and standards required for these environments.

W1916-3

FISHER ED CONTROL VALVE WITH 667 ACTUATOR

The easy-e™ Valve Family

ED, EAD, and EDR valves are part of the versatile easy-e family of Fisher industrial control valves. easy-e valves share the following characteristics:

- Multiple trim material choices
- Trim temperature capability with standard metal seats to 427°C (800°F)
  - FGM gaskets
- Interchangeable, restricted-capacity trims and full-size trims match variable process flow demands
- Different cage/plug styles provide particular flow characteristics for highly-specialized applications. The standard cage comes in three different flow characteristics:
  - quick-opening
  - linear
  - equal percentage
- Noise in gaseous service may be attenuated by using Whisper Trim™ I, Whisper Trim III (figure 9), and WhisperFlo™ cages (figure 11)
- 316 stainless steel packing box parts are standard (including packing flange, studs, and nuts)

Features

- **Compliance with the Clean Air Act**—Optional ENVIRO-SEAL packing systems (figure 6) provide an improved stem seal to help prevent the loss of process fluid. The ENVIRO-SEAL packing systems feature PTFE, Graphite ULF, or Duplex packing with live-loading for reduced packing maintenance.

- **Valve Plug Stability**— Rugged cage guiding provides high valve plug stability, which reduces vibration and mechanical noise.

- **More Flow Capacity for Initial Investment**— Streamlined flow passages in the the ED, EAD, and EDR valves provide excellent capacities and flow.

- **Balanced Valve Plug Construction**— Balanced valve plug construction permits use of smaller, lower-cost Fisher actuators. Also, trim inventory costs are cut because dimensional standardization permits use of most standard easy-e trim parts.

- **High-Temperature Capability with Class IV or Class V Shutoff**—Use of multiple graphite piston rings (figure 1) permit Class IV shutoff up to 593°C (1100°F).
  Use of C-seal trim (see figure 5) permits Class V shutoff up to 593°C (1100°F).

- **Compliance with European Standards**— Valves are available with dimensions specified by EN/DIN standards. See figure 13.

- **Sour Service Capability**— Unless otherwise noted, references are to NACE MR0175-2002. Optional materials are available to meet NACE MR0103 and NACE MR0175 / ISO 15156. Material requirements under these standards vary by edition and year of issue; the specific standard must be specified.

- **Operating Economy**—Increased wear resistance provided by standard hardened stainless steel trim means long service life.

- **Maintenance Economy**—The valve body can stay in the pipeline during removal of trim parts. The EDR valve also features easy valve access without removing the actuator.

Table of Contents

Specifications

Available Configurations

ED: Single-port, globe-style control valve with cage guiding, balanced valve plug, and push-down-to-close valve plug action (figure 1)
EAD: Angle version of ED control valve, used to facilitate piping or in applications where a self-draining valve is desired (figure 2)
EDR: Same as ED control valve except with push-down-to-open valve plug action (figure 3)

Valve Sizes

See table 2

End Connection Styles(1)(2)

Cast Iron Valves
Flanged: ED, NPS 1 through 8, ■ CL125 flat-face or ■ CL250 raised-face flanges per ASME B16.1
Steel and Stainless Steel Valves
Flanged: ■ CL150, 300, or 600 raised-face (RF) or ring-type joint (RTJ) flanges per ASME B16.5, ■ Raised-face (RF) flanges per EN1092-1/B
Screwed or Socket Welding: NPS 1 through 2, consistent with ASME B16.11
Buttwelding: NPS 1 through 8
Schedules 40 or 80 consistent with ASME B16.25

Socket weld end connection style is not available for EAD
Also, see table 2 and figures 13 and 14

Maximum Inlet Pressures and Temperatures(1)(2)

As listed below, unless limited by maximum pressure drop or material temperature capabilities
Cast Iron Valves
Flanged: Consistent with CL125B or 250B per ASME B16.1
Steel and Stainless Steel Valves
Flanged: Consistent with CL150, 300, and 600(3) per ASME B16.34
Screwed or Welding: Consistent with CL600(3) per ASME B16.34

Maximum Pressure Drop(2)

Same as maximum inlet pressure for specific construction defined above, except where further limited as follows:

All Valves Except Those with Whisper Trim III and WhisperFlo Cages: See figure 8
Valves with Whisper Trim III Cages (NPS 6 ED): See figure 10 except where further limited by the following max $\Delta P/P_1$ ratio(4)—0.60 for level A3 cage, 0.75 for level B3 cage, 0.85 for level C3 cage, or 0.99 for level D3 cage
Valves for NACE MR0175 / ISO 15156 and MR0103: See figure 12

Shutoff Classifications per ANSI/FCI 70-2 and IEC 60534-4

Class II: Standard with single graphite ring and 33 through 203 mm (1.3125 through 8-inch) port size
Class III: Optional for valves with single graphite piston ring and 87 mm (3.4375 inch) or larger port diameter
Class IV: For valves with multiple graphite piston rings and 111 mm (4.375 inch) or larger port diameter
Class V High-Temperature: For valves with port diameters from 73 through 203.2 mm (2.875 through 8-inch) with optional C-seal trim. See table 1

Construction Materials

Valve Body, Bonnet, and Bonnet Spacer or Bottom Flange, if used: ■ Cast Iron, ■ WCC carbon steel, ■ CF8M (cast 316 stainless steel), ■ LCC carbon steel, ■ WC9 chrome moly steel, or ■ other materials upon request
Valve Plug, Cage, and Metal Seating Parts
All Valves Except Those with Whisper Trim III and WhisperFlo Cages: See table 3
Valves with Whisper Trim III and WhisperFlo Cages (NPS 4 and 6 ED): See tables 4 and 5
Valves for NACE Specification: See table 10
Bellows Seal Assembly: ■ 316L stainless steel or ■ N04400
All Other Parts: See table 6

- continued -

Specifications (continued)

Material Temperature Capabilities[2]

Valve Body/Trim Combinations
All Valves Except Those with Whisper Trim III and WhisperFlo Cages: See table 7
Valves with Whisper Trim III Cages (NPS 6 ED): See table 4
Valves with WhisperFlo Cages (NPS 4 and 6 ED): See table 5
All Other Parts: See table 6

Flow Characteristics

Standard Cages: ■ Quick-opening, ■ linear, or ■ equal percentage
Whisper Trim and WhisperFlo Cages: Linear

Flow Directions

ED or EAD: ■ Standard Cage–Normally down, ■ Whisper Trim and WhisperFlo Cages—Always up
EDR: ■ Standard Cage--Normally up, ■ Whisper Trim Cage—Always down

Flow Coefficients and Noise Level Prediction

See table 9 and Catalog 12

Port Diameters and Valve Plug Travels

See table 11

Yoke Boss and Stem Diameters

See table 11

Typical Bonnet Styles

■ Plain or ■ extension. See figures 13 and 14 for standard dimensions. See table 8 for selection guidelines
■ ENVIRO-SEAL bellows seal bonnet. See figure 13 for standard dimensions
See figure 7 for view of ENVIRO-SEAL bellows seal bonnet. Also, see Bulletin 59.1:070, ENVIRO-SEAL Bellows Seal Bonnets, for further information

Packing Arrangements

■ Single PTFE V-ring (standard), ■ double arrangements, ■ leak-off arrangements, ■ ENVIRO-SEAL packing system. See figure 6 for ENVIRO-SEAL configuration
ENVIRO-SEAL Packing Systems in vacuum service: Standard ENVIRO-SEAL packing systems can be used in vacuum service with packing rings in standard orientation. Do not reverse the ENVIRO-SEAL PTFE packing rings. See Bulletin 59.1:061, ENVIRO-SEAL Packing Systems for Sliding-Stem Valves, for further information

Approximate Weights

NPS 1: 14 kg (30 lb)
NPS 1-1/2: 20 kg (45 lb)
NPS 2: 39 kg (85 lb)
NPS 2-1/2: 45 kg (100 lb)
NPS 3: 57 kg (125 lb)
NPS 4: 77 kg (170 lb)
NPS 6: 159 kg (350 lb)
NPS 8: 408 kg (900 lb)

Additional Options

■ Seal welding of EDR valve body/bonnet joint for temperatures above 232°C (450°F), ■ lubricator, ■ lubricator/isolating valve, ■ drilled and tapped connection in extension bonnet for leak-off service, ■ valve body drain plug, ■ style 3 fabricated extension bonnet made on order to a specific length for cryogenic service, ■ style NS bonnet for seismic service requirements, ■ packings suitable for nuclear service, ■ C-seal trim for Class V high-temperature shutoff

1. EN (or other) ratings and end connections can usually be supplied; consult your Emerson Process Management sales office.
2. The pressure/temperature limits in this bulletin and in any applicable standard limitations should not be exceeded.
3. Certain bonnet bolting material selections may require a CL600 easy-e valve assembly to be derated. Contact your Emerson Process Management sales office for more information.
4. Limitation based on excessive noise increases if max ΔP/P1 ratio for a given cage level is exceeded.

ENVIRO-SEAL Packing System Specifications

Applicable Stem Diameters

■ 9.5 mm (3/8 inches), ■ 12.7 (1/2), ■ 19.1 (3/4), ■ 25.4 (1), and ■ 31.8 (1-1/4) diameter valve stems

Maximum Pressure/Temperature Limits[1]

To Meet the EPA Fugitive Emission Standard of 100 PPM[2]
For ENVIRO-SEAL PTFE and ENVIRO-SEAL Duplex packing systems: full CL300 up to 232°C (450°F)
For ENVIRO-SEAL Graphite ULF packing system: 104 bar (1500 psig) at 316°C (600°F)

Construction Materials

PTFE Packing Systems
Packing Ring and Lower Wiper: PTFE V-ring[3]
Male and Female Adaptor Rings: Carbon-filled PTFE V-ring
Anti-Extrusion Washer: Filled PTFE
Lantern Ring: S31600 (316 stainless steel)
Spring: ■ 17-7PH stainless steel or ■ N06600
Packing Box Flange: S31600
Packing Follower: S31600 lined with carbon-filled PTFE
Packing Box Studs: Strain-hardened 316 stainless steel
Packing Box Nuts: 316 stainless steel SA194 Grade 8M

Graphite ULF Packing Systems
Packing Ring: Graphite rings
Spring: ■ 17-7PH stainless steel or ■ N06600
Packing Box Flange: S31600
Packing Follower: S31600 lined with carbon-filled PTFE
Packing Box Studs: Strain-hardened 316 stainless steel
Packing Box Nuts: 316 stainless steel SA194 Grade 8M

1. Refer to the valve specifications in this bulletin for pressure/temperature limits of valve parts. Do not exceed the pressure/temperature rating of the valve. Do not exceed any applicable code or standard limitation.
2. The Environmental Protection Agency (EPA) has set a limit of 100 parts per million (ppm) for fugitive emissions from a valve in selected VOC (Volatile Organic Compound) services.
3. In vacuum service, reversing the ENVIRO-SEAL PTFE packing rings is not necessary.

2. End connection EN1092-1/B.

C-seal Trim Description

C-seal trim is available for valves with port diameters from 2.875 inches through 8 inches.

With C-seal trim, a balanced valve can achieve high-temperature, Class V shutoff. Because the C-seal plug seal is formed from metal (N07718 nickel alloy) rather than an elastomer, a valve equipped with the C-seal trim can be applied in processes with a fluid temperature of up to 593°C (1100°F).

ENVIRO-SEAL and HIGH-SEAL Packing Systems

ENVIRO-SEAL and HIGH-SEAL packing systems offer exceptional sealing capabilities. They easily install in your existing valves or can be purchased with new valves. These systems may help prevent the loss of process fluid. The long operational life and reliability of these systems also reduces your maintenance costs and downtime.

For applications requiring compliance with environmental protection regulations, the unique Fisher ENVIRO-SEAL packing system (figure 6) and a unique ENVIRO-SEAL bellows seal system (figure 7) are offered. The emission control packing system keeps emission concentrations below the EPA 100 ppm requirement.

For an excellent stem seal in applications that are not environmentally-sensitive, the Fisher HIGH-SEAL Graphite ULF packing system (figure 6) is offered. The HIGH-SEAL packing system provides excellent sealing at pressure/temperature ratings beyond ENVIRO-SEAL limits. ENVIRO-SEAL systems may also be applied for excellent stem sealing in higher pressure/temperature applications not requiring EPA compliance.

ENVIRO-SEAL packing systems, available with PTFE, Graphite ULF, or Duplex packing, and the HIGH-SEAL packing systems, Graphite ULF and graphite composite, feature live-loading and unique packing-ring arrangements for long-term, consistent sealing performance.

Table 3. Typical Combinations of Metal Trim Parts[1] for all Valves Except Those for NACE Specification, Whisper Trim III, and WhisperFlo Cages

Trim Designation	Valve Plug	Cage	Seat Ring	Liner (EAD Valve Only)
1 (standard for ED, EAD, and EDR in all valve body materials except CF8M)	S41600 HT	CB7Cu-1 HT	S41600 HT or CA15 HT[2]	S41600 HT

28[5]	S31600 with seat hard faced with CoCr-A hardfacing alloy			
29 (standard for CF8M bodies in all designs)[5]	S31600	CF8M with electroless nickel coating (ENC)	S31600	S31600
37 and 37H[3]	S31600 with seat and guide hard faced with CoCr-A hardfacing alloy	CB7Cu-1 HT	R30006 (alloy 6)	

1. Nonferrous-alloy combinations are also available. Consult your Emerson Process Management sales office for details.
2. CA15 is used for NPS 6 and 8 full-size and restricted-trim valves.
3. Trims 3H and 37H have clearances for high-temperature service.
4. Not for use with Whisper Trim I.
5. Not use with Whisper Trim I with 136 mm (5.375 Inch) and larger ports.

1. Lubricated nuts are standard.
2. May be used down to -254°C (-425°F) if manufacturing process includes Charpy impact test.
3. This minimum is due to thermal expansion differential between piston ring and cage at low temperatures.
4. Except 427°C (800°F) on oxidizing service.
5. Spring is used only with single PTFE V-ring packing; lantern ring replaces spring in other packings.
6. Except 371°C (700°F) on oxidizing service.

WITH CL600 [1]
316 STAINLESS STEEL (CF8M) VALVE BODY

B1470-7

Notes:
[1] Do not exceed the maximum pressure and temperature for the pressure rating of the valve material used, even though the trims shown may have higher capabilities.
[2] Be especially careful to specify service temperature if trim 3 or 37 is selected, as different thermal expansion rates require special plug clearances. Specify trim 37H for temperatures above 210°C (410°F). Specify trim 3H for temperatures above 427°C (800°F).
[3] Trim 29 may be used up to 103 bar (1500 psi) with clean, dry gas.
[4] Use trim 27 instead of trim 29 for nonlubricating fluids such as superheated steam or dry gases between 149 and 316°C (300 and 600°F).

Figure 9. Whisper Trim III Cage in NPS 6 Fisher ED Valve

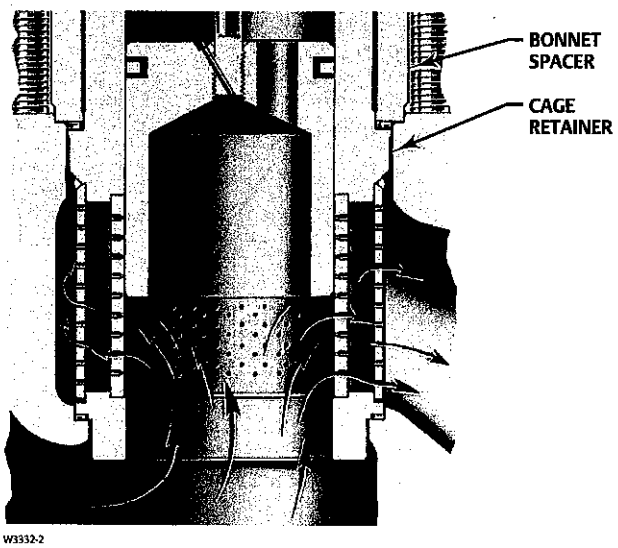

Figure 10. Typical Trim Used for NPS 6 Fisher ED Valves with Whisper Trim III Cages

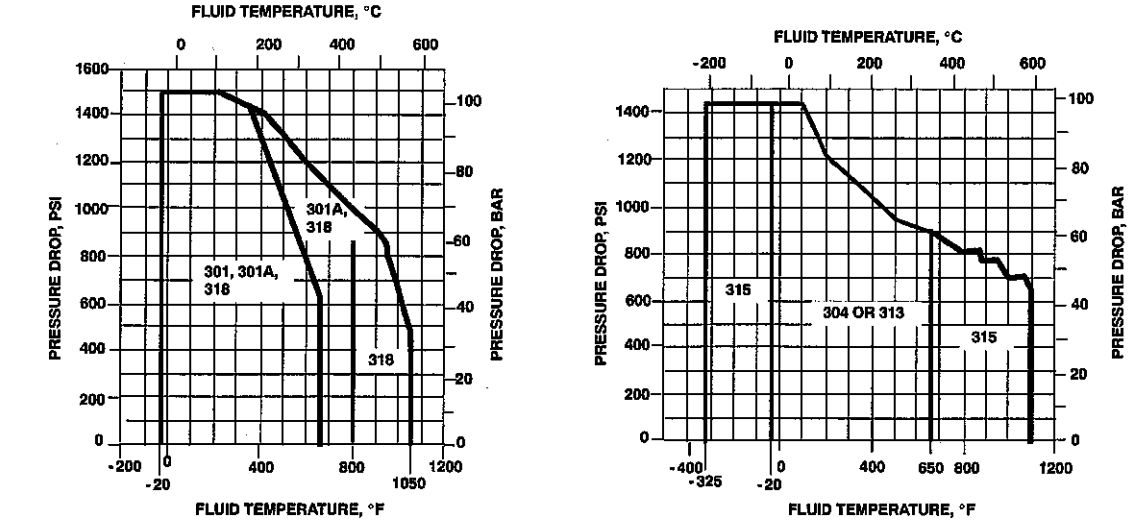

Note:
[1] Do not exceed the maximum pressure and temperature for the pressure rating of the body material used, even though the trim shown may have higher capabilities.

CF8M (316 stainless steel)	27	All	-198[3]	343	-325[3]	650
	28	All	-198[3]	149[4]	-325[3]	300[4]
	29	All	-198[3]	149[4]	-325[3]	300[4]

1. For metal trim parts only. Restricted trim and full-sized limits are the same.
2. Same material also used for bottom flange, if required.
3. May be used down to -254°C (-425°F) if manufacturing process includes Charpy impact test.
4. Lubricating service allows usage to 316°C (600°F).

W6851-1

Table 8. Bonnet Selection Guidelines

BONNET STYLE	PACKING MATERIAL	IN-BODY PROCESS TEMPERATURE LIMITS(1) °C	IN-BODY PROCESS TEMPERATURE LIMITS(1) °F
Plain: ■ Standard for all valves through NPS 6 valve body with 2-13/16 yoke boss diameter ■ Standard for NPS 6 and 8 valves in cast iron and WCC steel bonnet material with 3-9/16 yoke boss diameter	PTFE V-ring	-18 to 232	0 to 450
	PTFE/Composition	-18 to 232	0 to 450
	Graphite ribbon/filament	-18 to maximum shown in table 6	0 to maximum shown in table 6
Style 1 Cast Extension: ■ Standard for NPS 8 valves in S31600 bonnet material with 3-9/16 yoke boss diameter	PTFE V-ring PTFE/Composition	-46 to 427	-50 to 800
	Graphite ribbon/filament	-46 to to maximum shown in table 6	-50 to maximum shown in table 6
Style 2 Cast Extension: ■ Optional for NPS 2 through 4 valves with 2-13/16 inch yoke boss diameter ■ Optional for NPS 6 and 8 valves with 3-9/16 yoke boss diameter. Not available for NPS 8 valve in S31600 bonnet material	PTFE V-ring PTFE/Composition	-101 to 427	-150 to 800
	Graphite ribbon/filament	-101 to maximum shown in table 6	-150 to maximum shown in table 6
ENVIRO-SEAL bellows seal bonnet	PTFE Graphite ULF	For exceptional stem sealing capabilities. See Bulletin 59.1:070, ENVIRO-SEAL Bellows Seal Bonnets, for pressure/temperature ratings.	

1. These in-body process temperatures assume an outside, ambient temperature of 21°C (70°F) and no insulation on the bonnet. When using any packing at low process temperatures, a cast extension bonnet may have to be used to prevent packing damage which could result from the formation of valve stem frost. Material selection for trim and other components will also be limiting factors.

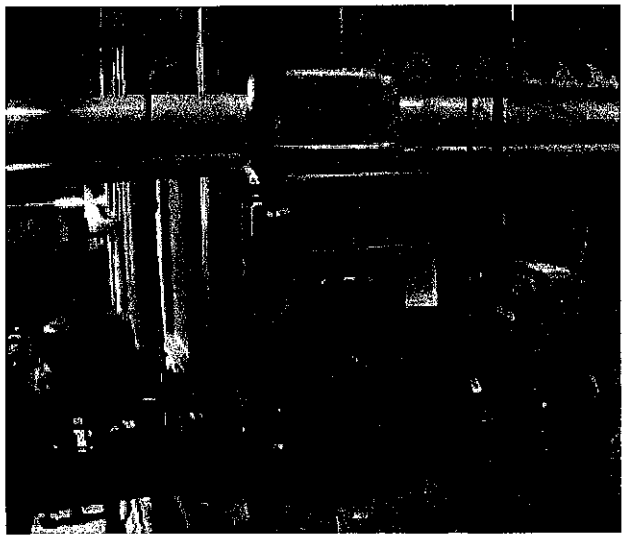
GROUP 14 LINEAR VALVE ACTUATORS

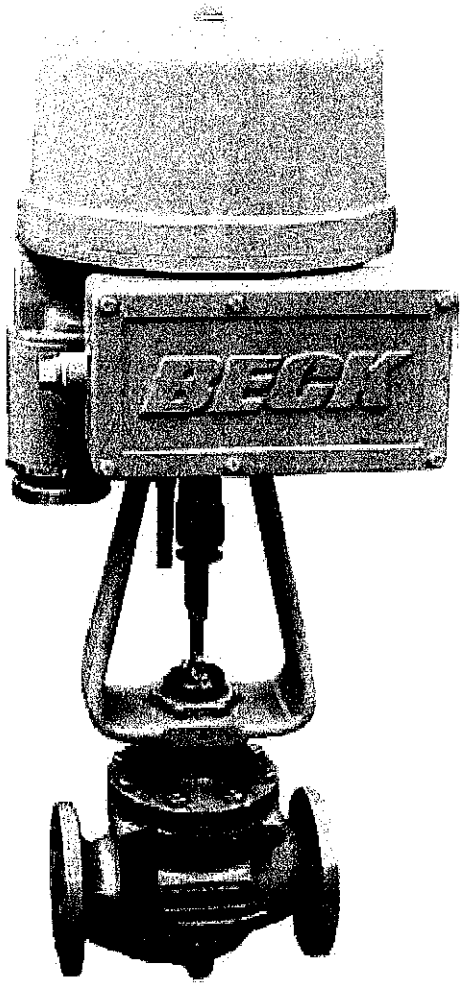
Precise, responsive modulation and tight shutoff for exceptional performance in globe valve applications.

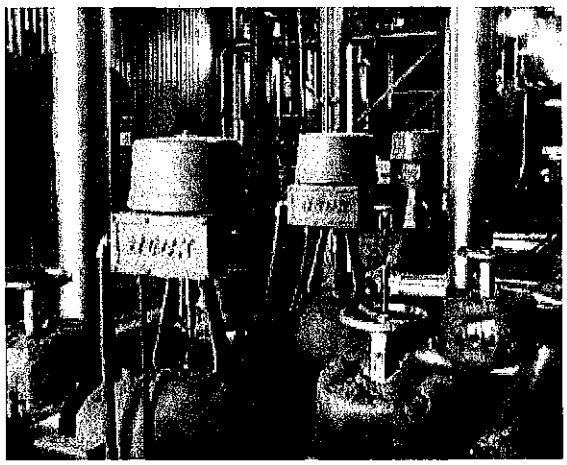
INTRODUCTION

Group 14 actuators are ideal for steam flow control, combustion control and any other application which requires more precise valve position control or faster response than pneumatic or electric actuators can deliver.

Valves and actuators may be ordered together as factory-mounted assemblies, ready for drop-in installation, or actuators can be supplied separately along with the necessary hardware for field installation on existing valves.







FEATURES

Beck Actuator Motor
Precise, Reliable Control

Together with Beck's control electronics and rugged gear train, Beck motors provide the precise, reliable positioning required for modern control loops.

- Never overheats or burns out, even under demanding modulating control or stalled conditions.
- Reaches full speed and torque in less than 50 milliseconds and stops within 25 milliseconds, eliminating deadtime.
- Provides extremely accurate positioning in modulating applications.
- Will not coast or overshoot the desired position.
- Low current draw of 0.33 A to 1.5 A, and therefore low power consumption, eliminates the need for relays and permits the use of uninterruptible power supplies.

Electric Handswitch
Time-Saving Local Operation

Valves may be operated at their individual locations with the built-in electric Handswitch. This saves time during installation and troubleshooting, allowing on-line adjustments to be made quickly and easily by bypassing the electronics in the drive and control system.

The Handswitch also serves as an electrical backup in the event of control system failure.

Auxiliary and Over-travel Limit Switches

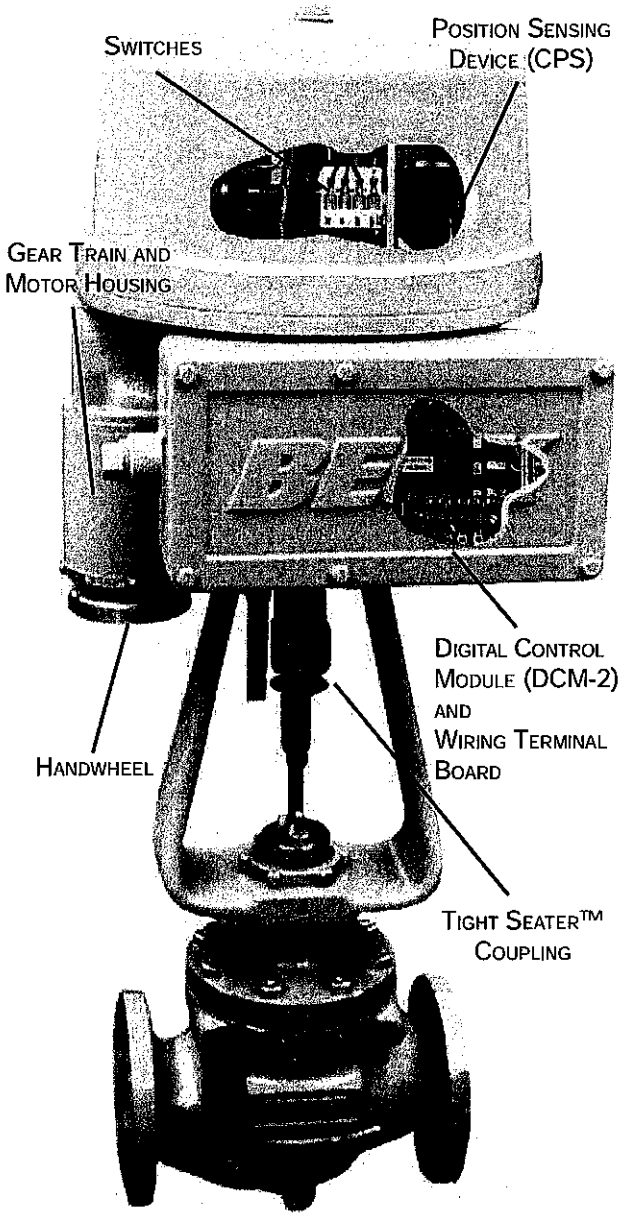
Two dedicated over-travel protection limit switches are provided. Up to four form C auxiliary switches are optionally available.

- SPDT switches rated for a minimum of 6 A at 120 V ac, (three times maximum motor current for most models) to ensure long life.
- Field-adjustable to operate at any point in the drive's travel range.
- May initiate secondary functions or provide remote indication of drive position.
- Eliminates unreliable and maintenance-intensive proximity switches.

Drive Train
Power and Durability to Maximize Control Availability

Beck's durable gear train maintains accurate, consistent control element positioning even under the demanding conditions of an active control loop.

- Gear trains use an all spur gear construction of heat-treated alloy steels and ductile iron.
- Efficient, wide-face spur gearing essentially eliminates wear-induced backlash and positioning inaccuracies.



GROUP 14 LINEAR VALVE ACTUATOR COMPONENTS

- Integral self-locking mechanism ensures that drives hold a minimum of 200% of rated torque with the motor de-energized.

Manual Handwheel

Convenient Manual Control Without Declutch

An easy-to-turn, spoke-free Handwheel allows manual operation during installation or power outages.

- Moves valves to any position smoothly and easily, even under full load conditions.
- Mechanical stops in housing prevent manual overtravel.
- The motor operates at 60 or 72 RPM, so the Handwheel poses no safety hazard.

Housing

Superior Protection and Convenient Access to Components

Beck drives feature a cast aluminum body with individual compartments to protect components from moisture and dirt, and allow easy access for installation and calibration.

- Precision-machined aluminum alloy castings with corrosion-resistant poly-urethane paint provide a rugged, dust-tight, weatherproof enclosure.
- Individual compartments protect all major components.
- Each compartment can be accessed without exposing other components.
- Gasketed, precision-machined covers provide extra protection for harsh indoor and outdoor environments.
- Output and Handwheel shafts are also sealed with weatherproof, double-lip seals.

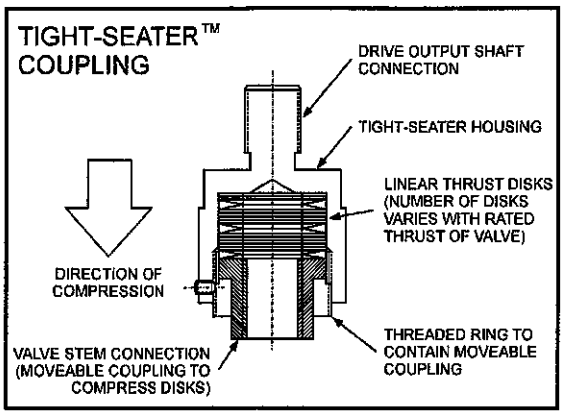
Mounting Versatility

Beck Actuators can be Mounted in any Orientation for Greater Installation Flexibility

Beck drives are configured and lubricated in such a way that they may be mounted in any convenient position. This flexibility allows drives to be installed in hard-to-fit locations.

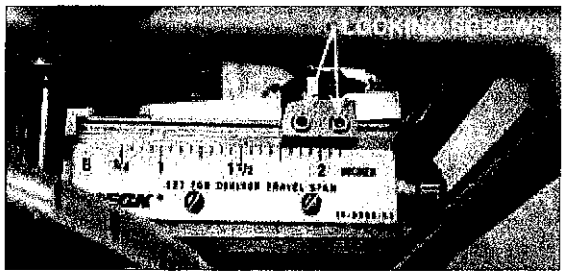
Tight-Seater™

The unique Tight-Seater™ coupling incorporated into every unit provides positive seating of the valve plug for tight shutoff. This device compresses the plug into the seat of the valve until the actuator reaches its end of travel, for a seating force at least equal to the rated thrust of the valve. A patented self-locking mechanism holds the output shaft in position even when the motor is de-energized.



One-Step Valve Travel Adjustment

Beck's unique Calibar index allows fast and easy travel adjustment because position feedback devices and over-travel limit switches are all adjusted at the same time. Intermediate auxiliary switches are automatically adjusted to the same percentage of full travel.



Factory Mounted Assemblies

Beck will supply Group 14 actuators mounted to valves, fully tested and ready for simple drop in installation.

Group 14 actuators are generally furnished with a standard cast yoke for globe valves with boss sizes up to 3 3/4" [95 mm]. When the Group 14 actuator is installed on valves with boss sizes exceeding 3 3/4" [95 mm], special yokes are built to provide sturdy, deformation-free assemblies.

SPECIFICATIONS

General Specifications

Input Power

120 V ac, single-phase 50 or 60 Hz
240 V ac, single-phase 50 or 60 Hz

Operating Conditions

–40° to 185°F (–40° to 85°C)

Isolation

Demand Input and Position Feedback signals are isolated from the ground and ac power line.

Action on Loss of Power

Stays in place.

Control Types

Modulating (DCM-2) digital control
Modulating (ESR) analog control
Modulating direct ac control
3,5 or 6 position control
2 position (open/close) control

Input and Feedback Signals

Depends upon the control option (see below)

Available Communication Protocols

Option 9 drives may be equipped with HART® or Fieldbus Foundation™ technology. Contact a Beck Sales Engineer for details and information regarding other options.

Minimum Step (Modulating Control)

DCM-2 -- 0.10%, 0.15% typical (configurable)
ESR -- 0.10%, 0.15% typical
Direct AC -- 0.1° (function of control system capabilities)

Stall Protection (protects drive and driven elements under stall conditions)

DCM-2 -- Time to stall is configurable from 30 to 300 seconds.
Other control types -- Optional Stall Protection Module is available.

Action on Loss of Input Signal (Power On)

Stays in place or, with some options, is field configurable to move to any preset position.

Over-travel Limit Switches (Dedicated)

Two Form C switches (one for each direction of travel).

Auxiliary Switches (Non-dedicated)

Up to four 6A, 120 V ac switches available. Switches are cam-operated, field-adjustable.

Handswitch

Permits local electrical operation independent of the controller signal. Standard on all units. An optional auxiliary contact can be used to indicate that the Handswitch is in "AUTO" mode or to sound an alarm if it is taken out of "AUTO". A locking Handswitch is also available.

Use the charts on this page to create a full specification model number.

First, select the basic model no. from the chart at right (blue column) and enter the first four digits in the blue "Model No." field below. Now select the control option that suits the application requirements using the information in the chart at the bottom of the page (brown column). Enter the control option designation.number (3 through 9) in the brown area of the "Model No." field below.

The next step is to determine the required thrust for the application as well as select the full stroke time in seconds as shown in the chart at right (green and yellow columns). Enter the selected thrust option in the green "Thrust" field and the selected timing option in the yellow "Timing" field below.

Finally, select the number of auxiliary switches desired (0, 2 or 4) and enter that number in the purple "Aux. Switches" field below.

The full specification model number is complete and can be used to specify a Beck drive.

For example, **14–109–1000–27–2** denotes a 14-100 basic model for modulating control (option 9 Digital Control Module) that is rated for 1,000 lbs thrust (4450 N) output with a full stroke time of 27 sec/in (1.06 sec/mm). It is equipped with two auxiliary form C switches.

CONTROL OPTION CHART

Basic Model No.	Thrust (lbs)[N]	Timing[4] (sec./in[mm])	Motor [1,2,3] Current (A)
14-100	340 [1513]	4 [.16]	0.32
	425 [1891]	11 [.43]	0.17
	600 [2670]	16 [.63]	0.32
	650 [2893]	8 [.31]	0.17
	800 [3560]	11 [.43]	0.17
	1,000 [4450]	27 [1.06]	0.37
	1,100 [4895]	16 [.63]	0.43
	1,620 [7209]	48 [1.89]	0.32
	1,800 [8010]	27 [1.06]	0.17
14-200	2,700 [12015]	16 [.63]	0.56
	4,000 [17800]	24 [.94]	0.35

Model Number — Torque — Timing — Aux. Switches

0 = Standard
2 or 4 = Optional[5]

CONTROL OPTION CHART[6]

Control Option	Control Mode	Control Board	Std. Control Input	Position Sensor	Std. Position Feedback
9	Modulating	DCM-2*	4–20 mA	CPS-2	4–20 mA
8	Modulating	ESR-4	4–20 mA	CPS-2	4–20 mA
7	Modulating	ESR-4	4–20 mA	Film Pot.	None
6	Modulating	None	120 V ac	CPS-2	4–20 mA
5	Modulating	None	120 V ac	Film Pot.	Film Pot.
4	5-Position	None	120 V ac	None	None
4	3-Position	None	120 V ac	None	None
3	2-Pos. (Open/Close)	None	120 V ac	None	None

[1] Unique Beck motor design has starting & stall current that approximate running current, so thermal overload protection is not required--just provide normal short-circuit protection.
[2] Motor currents shown are 60 Hz -- 50 Hz currents do not exceed 120% of 60 Hz levels.
[3] Actuator current @ 240 V ac is approx. 1/2 the 120 V ac current (motor current does not change @ 240 V ac).
[4] Stroke timings shown are based on 60 Hz power; 50 Hz power provides timings 20% greater.
[5] 2 or 4 auxiliary switches are available for most Group 14 actuators. Contact the factory regarding switch availability on control option 4 models. Standard travel limit switches have extra contacts which can be used for external signaling on 2-, 3- or 5-position control modes.
[6] Contact the factory if the signal options listed do not meet your requirements.

*** Smart Digital Control Module with std. HART communication capabilities (Foundation Fieldbus is available as an extra cost option).**
