

Fire Stations

The fire department was in the process of closing and consolidating fire stations at the time of site visit. JQP, Inc. surveyed the 6 fire stations that will remain active. Typical amenities provided within the fire stations include toilet rooms, locker rooms, sleeping areas and kitchens. Because the kitchen is part of the break room (versus part of the employees job description such as a commercial kitchen) it does not meet the 'employee only work area' exception and is required to be accessible.

While these are not high public use buildings, the public does visit the fire stations for tours, car seat installation checks and to report emergencies.
