

Tool Houses

JQP, Inc. surveyed 6 of the maintenance facilities, also known as Tool Houses, used by the city. These facilities typically include garage/shop space, office, employee break rooms (with full kitchens) and toilet rooms. Because the kitchen is part of the break room (versus part of the employees job description such as a commercial kitchen) it does not meet the 'employee only work area' exception and is required to be accessible.

There is typically a low level of public/visitor use at these buildings.
