Compartment Information

Compartment ID: 37342-EQUI0000000001-1
Compartment No: 1
Tank Wall Type: Single
Tank Material: Fiberglass
Subject Item Designation: 1
Overfill Prevention System: UST Automatic shutoff

Programs: UT
Capacity (gal): 8000
Cathodic Prot Sys: Not needed
Special Use Desc: None

Pipe Information

Pipe Wall Type: Single
Pipe Leak Detection: SIR, SSP
Pipe Material: Fiberglass
Pipe Corrosion Protection: Not needed

Stored Product: Gasoline
Tank Leak Detection: UST Statistical inventory reconciliation
Vapor Recovery Flag: No

Project File Url:
Year: 2021
Qapp Approval Agency Name:
Qapp Approved: No

Sample Result(s)

Pfas Chemical Name: Perfluoropentanesulfonate
Cas No: 175905-36-9
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.585
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorododecanesulfonate
Cas No: 343629-43-6
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.585
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:

Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoro-3,6-dioxaheptanoic acid
Cas No: 151772-58-6
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.17
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name: FtS 4:2 ion
Cas No: 414911-30-1
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 2.34
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: 9-Chlorohexadecafluoro-3-oxanone-1-sulfonic acid
Cas No: -
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 2.34
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorononanoic acid
Cas No: 375-95-1

Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.585
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorobutanoate
Cas No: 45048-62-2
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 2.34
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorooctanoic acid
Cas No: 335-67-1
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.585
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoro-3-methoxypropanoic acid
Cas No: 377-73-1
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.17

Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	3:3 Fluorotelomer carboxylate, ion(1-)
Cas No:	1169706-83-5
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	2.34
Detection Quantitation Unit Of:	ng/g
Analytical Method:

Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	FtS 6:2 ion
Cas No:	425670-75-3
Act Media Subdiv Nm:	Unknown
Result Detection:	PFAS Detected
Result Measure Value Ppt:	1890
Result Measure Value:	1.890000
Result Unit of Measure:	ng/g
Detection Quantitation Limit T:	
Detection Quantitation Measure:	
Detection Quantitation Unit Of:	
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (B,J)

Sample Result(s)

Pfas Chemical Name:	Perfluorotetradecanoic acid
Cas No:	376-06-7
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.585
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	2-(N-methylperfluoro-1-octanesulfonamido)-ethanol
Cas No:	24448-09-7
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	5.85
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name:	11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid
Cas No:	763051-92-9
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	2.34
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Decanoic acid, 4,4,5,5,6,6,7,7,8,8,9,9,10,10,10-pentadecafluoro-
Cas No:	812-70-4
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-

Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	14.6
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorododecanoic acid
Cas No:	307-55-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.585
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorohexanoic acid
Cas No:	307-24-4
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.585
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Sulfluramid
Cas No:	4151-50-2
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.673
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	

Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorohexanesulfonate
Cas No: 108427-53-8
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.585
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: FtS 8:2 ion
Cas No: 481071-78-7
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 2.34
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoroheptanesulfonate
Cas No: 146689-46-5
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.585
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: 1-Decanesulfonic acid, 1,1,2,2,3,3,4,4,5,5,6,6,7,7,8,8,9,9,10,10,10-heneicosafluoro-
Cas No: 335-77-3

Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.585
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoroheptanoic acid
Cas No:	375-85-9
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.585
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	N-methylperfluoro-1-octanesulfonamide
Cas No:	31506-32-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.585
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorobutanesulfonate
Cas No:	45187-15-3
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.585

Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	N-Ethyl-N-(2-hydroxyethyl)perfluorooctanesulfonamide
Cas No:	1691-99-2
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	4.39
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name:	N-methyl perfluorooctanesulfonamidoacetic acid
Cas No:	2355-31-9
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.585
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	2H,2H,3H,3H-Perfluorooctanoate
Cas No:	1799325-94-2
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	14.6
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Hexafluoropropylene oxide dimer acid
Cas No:	13252-13-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	2.22
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorooctanesulfonate
Cas No:	45298-90-6
Act Media Subdiv Nm:	Unknown
Result Detection:	PFAS Detected
Result Measure Value Ppt:	1500
Result Measure Value:	1.500000
Result Unit of Measure:	ng/g
Detection Quantitation Limit T:	
Detection Quantitation Measure:	
Detection Quantitation Unit Of:	
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	

Sample Result(s)

Pfas Chemical Name:	Perfluoro(4-methoxybutanoic) acid
Cas No:	863090-89-5
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.585
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorooctanesulfonamide
Cas No:	754-91-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-

Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.585
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: N-ethyl perfluorooctanesulfonamidoacetic acid
Cas No: 2991-50-6
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.585
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoro(2-ethoxyethane)sulfonic acid
Cas No: 113507-82-7
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.585
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorovaleric acid
Cas No: 2706-90-3
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.17
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:

Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorodecanoic acid
Cas No: 335-76-2
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.585
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoroundecanoate
Cas No: 196859-54-8
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.585
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Ammonium 4,8-dioxa-3H-perfluorononanoate
Cas No: 958445-44-8
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 2.34
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorononanesulfonate
Cas No: 474511-07-4

Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.585
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Project Detail(s)

Activity Identifier:	MNPCA-LD00584.2112070011.000ST
Location Name:	Duluth Airport Study Area
Fish Species:	
Environmental Media Name:	Tissue
Activity Type Code:	Sample-Routine
Project Identifier:	PRJ08167
Project Name:	Minnesota DNR PFAS in White-tailed deer livers/waterfowl
Project File Url:	
Year:	2021
Qapp Approval Agency Name:	
Qapp Approved:	No

Sample Result(s)

Pfas Chemical Name:	Perfluorodecanoic acid
Cas No:	335-76-2
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.392
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Hexafluoropropylene oxide dimer acid
Cas No:	13252-13-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.49
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;

Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorovaleric acid
Cas No: 2706-90-3
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.784
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: FtS 6:2 ion
Cas No: 425670-75-3
Act Media Subdiv Nm: Unknown
Result Detection: PFAS Detected
Result Measure Value Ppt: 836
Result Measure Value: 0.836000
Result Unit of Measure: ng/g
Detection Quantitation Limit T:
Detection Quantitation Measure:
Detection Quantitation Unit Of:
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (B,J)

Sample Result(s)

Pfas Chemical Name: 2-(N-methylperfluoro-1-octanesulfonamido)-ethanol
Cas No: 24448-09-7
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 3.92
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name: Decanoic acid, 4,4,5,5,6,6,7,7,8,8,9,9,10,10,10-pentadecafluoro-
Cas No: 812-70-4
Act Media Subdiv Nm: Unknown

Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	9.8
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorooctanoic acid
Cas No:	335-67-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.392
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	N-methylperfluoro-1-octanesulfonamide
Cas No:	31506-32-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.392
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	N-Ethyl-N-(2-hydroxyethyl)perfluorooctanesulfonamide
Cas No:	1691-99-2
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	2.94
Detection Quantitation Unit Of:	ng/g

Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name: Perfluorohexanoic acid
Cas No: 307-24-4
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: .392
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorononanesulfonate
Cas No: 474511-07-4
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: .392
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Sulfluramid
Cas No: 4151-50-2
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.451
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorohexanesulfonate
Cas No:	108427-53-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.392
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoro-3,6-dioxaheptanoic acid
Cas No:	151772-58-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.784
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name:	Perfluoropentanesulfonate
Cas No:	175905-36-9
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.392
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorotetradecanoic acid
Cas No:	376-06-7
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	

Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.392
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorobutanesulfonate
Cas No:	45187-15-3
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-

Detection Quantitation Measure:	.392
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	9-Chlorohexadecafluoro-3-oxanone-1-sulfonic acid
Cas No:	-
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.57
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid
Cas No:	763051-92-9
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.57
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;

Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorotridecanoic acid
Cas No: 72629-94-8
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: .392
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: 1-Decanesulfonic acid, 1,1,2,2,3,3,4,4,5,5,6,6,7,7,8,8,9,9,10,10,10-heneicosafluoro-
Cas No: 335-77-3
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: .392
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorooctanesulfonamide
Cas No: 754-91-6
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: .392
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoroundecanoate
Cas No: 196859-54-8
Act Media Subdiv Nm: Unknown

Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.392
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	FtS 4:2 ion
Cas No:	414911-30-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.57
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorododecanesulfonate
Cas No:	343629-43-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.392
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Ammonium 4,8-dioxa-3H-perfluorononanoate
Cas No:	958445-44-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.57
Detection Quantitation Unit Of:	ng/g

Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: FtS 8:2 ion
Cas No: 481071-78-7
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.57
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: N-ethyl perfluorooctanesulfonamidoacetic acid
Cas No: 2991-50-6
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: .392
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorooctanesulfonate
Cas No: 45298-90-6
Act Media Subdiv Nm: Unknown
Result Detection: PFAS Detected
Result Measure Value Ppt: 751
Result Measure Value: 0.751000
Result Unit of Measure: ng/g
Detection Quantitation Limit T:
Detection Quantitation Measure:
Detection Quantitation Unit Of:
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:

Sample Result(s)

Pfas Chemical Name: 3:3 Fluorotelomer carboxylate, ion(1-)
Cas No: 1169706-83-5
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.57
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoroheptanesulfonate
Cas No: 146689-46-5
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: .392
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoro-3-methoxypropanoic acid
Cas No: 377-73-1
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.784
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoro(2-ethoxyethane)sulfonic acid
Cas No: 113507-82-7
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:

Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.392
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	2H,2H,3H,3H-Perfluorooctanoate
Cas No:	1799325-94-2
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	9.8
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoro(4-methoxybutanoic) acid
Cas No:	863090-89-5
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.392
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorononanoic acid
Cas No:	375-95-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.392
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;

Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorobutanoate
Cas No: 45048-62-2
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.57
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoroheptanoic acid
Cas No: 375-85-9
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: .392
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorododecanoic acid
Cas No: 307-55-1
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: .392
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: N-methyl perfluorooctanesulfonamidoacetic acid
Cas No: 2355-31-9
Act Media Subdiv Nm: Unknown

Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.392
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Project Detail(s)

Activity Identifier:	MNPCA-LD00584.2112070012.000ST
Location Name:	Duluth Airport Study Area
Fish Species:	
Environmental Media Name:	Tissue
Activity Type Code:	Sample-Routine
Project Identifier:	PRJ08167
Project Name:	Minnesota DNR PFAS in White-tailed deer livers/waterfowl
Project File Url:	
Year:	2021
Qapp Approval Agency Name:	
Qapp Approved:	No

Sample Result(s)

Pfas Chemical Name:	Perfluorotetradecanoic acid
Cas No:	376-06-7
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.392
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	N-ethyl perfluorooctanesulfonamidoacetic acid
Cas No:	2991-50-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.392
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Sulfluramid
Cas No:	4151-50-2
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.451
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoroundecanoate
Cas No:	196859-54-8
Act Media Subdiv Nm:	Unknown
Result Detection:	PFAS Detected
Result Measure Value Ppt:	101
Result Measure Value:	0.101000
Result Unit of Measure:	ng/g
Detection Quantitation Limit T:	
Detection Quantitation Measure:	
Detection Quantitation Unit Of:	
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (B,J)

Sample Result(s)

Pfas Chemical Name:	Ammonium 4,8-dioxa-3H-perfluorononanoate
Cas No:	958445-44-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.57
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	FtS 4:2 ion
Cas No:	414911-30-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit

Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.57
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorodecanoic acid
Cas No: 335-76-2
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: .392
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Decanoic acid, 4,4,5,5,6,6,7,7,8,8,9,9,10,10,10-pentadecafluoro-
Cas No: 812-70-4
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 9.8
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorobutanesulfonate
Cas No: 45187-15-3
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: .392
Detection Quantitation Unit Of: ng/g
Analytical Method:

Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: 2H,2H,3H,3H-Perfluorooctanoate
Cas No: 1799325-94-2
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 9.8
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoropentanesulfonate
Cas No: 175905-36-9
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: .392
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: N-Ethyl-N-(2-hydroxyethyl)perfluorooctanesulfonamide
Cas No: 1691-99-2
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 2.94
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name:	Perfluorooctanoic acid
Cas No:	335-67-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.392
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	FtS 8:2 ion
Cas No:	481071-78-7
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.57
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoroheptanoic acid
Cas No:	375-85-9
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.392
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorooctanesulfonamide
Cas No:	754-91-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit

Detection Quantitation Measure:	.392
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorotridecanoic acid
Cas No:	72629-94-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.392
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoroheptanesulfonate
Cas No:	146689-46-5
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.392

Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorohexanesulfonate
Cas No: 108427-53-8
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: .392
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorobutanoate
Cas No: 45048-62-2
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.57
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoro(4-methoxybutanoic) acid
Cas No: 863090-89-5
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: .392
Detection Quantitation Unit Of: ng/g
Analytical Method:

Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	1-Decanesulfonic acid, 1,1,2,2,3,3,4,4,5,5,6,6,7,7,8,8,9,9,10,10,10-heneicosafluoro-
Cas No:	335-77-3
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.392
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	FtS 6:2 ion
Cas No:	425670-75-3
Act Media Subdiv Nm:	Unknown
Result Detection:	PFAS Detected
Result Measure Value Ppt:	637
Result Measure Value:	0.637000
Result Unit of Measure:	ng/g
Detection Quantitation Limit T:	
Detection Quantitation Measure:	
Detection Quantitation Unit Of:	
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (B,J)

Sample Result(s)

Pfas Chemical Name:	Perfluoro-3,6-dioxaheptanoic acid
Cas No:	151772-58-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.784
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name:	Perfluorododecanesulfonate
Cas No:	343629-43-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.392
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorononanesulfonate
Cas No:	474511-07-4
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.392
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorovaleric acid
Cas No:	2706-90-3
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.784
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoro(2-ethoxyethane)sulfonic acid
Cas No:	113507-82-7
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit

Detection Quantitation Measure:	.392
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Hexafluoropropylene oxide dimer acid
Cas No:	13252-13-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.49
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	9-Chlorohexadecafluoro-3-oxanone-1-sulfonic acid
Cas No:	-
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.57
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	3:3 Fluorotelomer carboxylate, ion(1-)
Cas No:	1169706-83-5
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.57
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorooctanesulfonate
Cas No:	45298-90-6
Act Media Subdiv Nm:	Unknown
Result Detection:	PFAS Detected
Result Measure Value Ppt:	991
Result Measure Value:	0.991000
Result Unit of Measure:	ng/g
Detection Quantitation Limit T:	
Detection Quantitation Measure:	
Detection Quantitation Unit Of:	
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	

Sample Result(s)

Pfas Chemical Name:	2-(N-methylperfluoro-1-octanesulfonamido)-ethanol
Cas No:	24448-09-7
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	3.92
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name:	Perfluorohexanoic acid
Cas No:	307-24-4
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.392
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorononanoic acid
Cas No:	375-95-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit

Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.392
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Project Detail(s)

Activity Identifier:	MNPCA-LD00584.2112070006.000ST
Location Name:	Duluth Airport Study Area
Fish Species:	
Environmental Media Name:	Tissue
Activity Type Code:	Sample-Routine
Project Identifier:	PRJ08167
Project Name:	Minnesota DNR PFAS in White-tailed deer livers/waterfowl
Project File Url:	
Year:	2021
Qapp Approval Agency Name:	
Qapp Approved:	No

Sample Result(s)

Pfas Chemical Name:	N-Ethyl-N-(2-hydroxyethyl)perfluorooctanesulfonamide
Cas No:	1691-99-2
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	3.71
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name:	Perfluoroheptanoic acid
Cas No:	375-85-9
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.495
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Ammonium 4,8-dioxa-3H-perfluorononanoate
Cas No:	958445-44-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.98
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	3:3 Fluorotelomer carboxylate, ion(1-)
Cas No:	1169706-83-5
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.98
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorotridecanoic acid
Cas No:	72629-94-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.495
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorohexanesulfonate
Cas No:	108427-53-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-

Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.495
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	N-ethyl perfluorooctanesulfonamidoacetic acid
Cas No:	2991-50-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.495
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Sulfluramid
Cas No:	4151-50-2
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.569
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoropentanesulfonate
Cas No:	175905-36-9
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.495
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	

Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: 1-Decanesulfonic acid, 1,1,2,2,3,3,4,4,5,5,6,6,7,7,8,8,9,9,10,10,10-heneicosafluoro-
Cas No: 335-77-3
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: .495
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: N-methyl perfluorooctanesulfonamidoacetic acid
Cas No: 2355-31-9
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: .495
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoro-3-methoxypropanoic acid
Cas No: 377-73-1
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.99
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoroundecanoate
Cas No: 196859-54-8

Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: .495
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Hexafluoropropylene oxide dimer acid
Cas No: 13252-13-6
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.88
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: 9-Chlorohexadecafluoro-3-oxanone-1-sulfonic acid
Cas No: -
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.98
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: 11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid
Cas No: 763051-92-9
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.98

Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	2-(N-methylperfluoro-1-octanesulfonamido)-ethanol
Cas No:	24448-09-7
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	4.95
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name:	Perfluoro(2-ethoxyethane)sulfonic acid
Cas No:	113507-82-7
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.495
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorobutanoate
Cas No:	45048-62-2
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.98
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Decanoic acid, 4,4,5,5,6,6,7,7,8,8,9,9,10,10,10-pentadecafluoro-
Cas No:	812-70-4
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	12.4
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorononanesulfonate
Cas No:	474511-07-4
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.495
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorododecanesulfonate
Cas No:	343629-43-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.495
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorotetradecanoic acid
Cas No:	376-06-7
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-

Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: .495
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: N-methylperfluoro-1-octanesulfonamide
Cas No: 31506-32-8
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: .495
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorohexanoic acid
Cas No: 307-24-4
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: .495
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoroheptanesulfonate
Cas No: 146689-46-5
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: .495
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:

Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorovaleric acid
Cas No: 2706-90-3
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.99
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoro(4-methoxybutanoic) acid
Cas No: 863090-89-5
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: .495
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorononanoic acid
Cas No: 375-95-1
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: .495
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorooctanesulfonamide
Cas No: 754-91-6

Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.495
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	2H,2H,3H,3H-Perfluorooctanoate
Cas No:	1799325-94-2
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	12.4
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	FtS 6:2 ion
Cas No:	425670-75-3
Act Media Subdiv Nm:	Unknown
Result Detection:	PFAS Detected
Result Measure Value Ppt:	1960
Result Measure Value:	1.960000
Result Unit of Measure:	ng/g
Detection Quantitation Limit T:	
Detection Quantitation Measure:	
Detection Quantitation Unit Of:	
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (B)

Sample Result(s)

Pfas Chemical Name:	FtS 4:2 ion
Cas No:	414911-30-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.98

Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoro-3,6-dioxaheptanoic acid
Cas No:	151772-58-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.99
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name:	Perfluorooctanesulfonate
Cas No:	45298-90-6
Act Media Subdiv Nm:	Unknown
Result Detection:	PFAS Detected
Result Measure Value Ppt:	1580
Result Measure Value:	1.580000
Result Unit of Measure:	ng/g
Detection Quantitation Limit T:	
Detection Quantitation Measure:	
Detection Quantitation Unit Of:	
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	

Sample Result(s)

Pfas Chemical Name:	FtS 8:2 ion
Cas No:	481071-78-7
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.98
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorobutanesulfonate
Cas No:	45187-15-3
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:

Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Project Detail(s)

Activity Identifier:	MNPCA-LD00584.2112070008.000ST
Location Name:	Duluth Airport Study Area
Fish Species:	
Environmental Media Name:	Tissue
Activity Type Code:	Sample-Routine
Project Identifier:	PRJ08167
Project Name:	Minnesota DNR PFAS in White-tailed deer livers/waterfowl
Project File Url:	
Year:	2021
Qapp Approval Agency Name:	
Qapp Approved:	No

Sample Result(s)

Pfas Chemical Name:	Perfluorododecanesulfonate
Cas No:	343629-43-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.372
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorooctanesulfonate
Cas No:	45298-90-6
Act Media Subdiv Nm:	Unknown
Result Detection:	PFAS Detected
Result Measure Value Ppt:	11800
Result Measure Value:	11.800000
Result Unit of Measure:	ng/g
Detection Quantitation Limit T:	
Detection Quantitation Measure:	
Detection Quantitation Unit Of:	
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:

Result Comment:	

Sample Result(s)

Pfas Chemical Name: Perfluorooctanesulfonamide
Cas No: 754-91-6
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.372
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoroheptanesulfonate
Cas No: 146689-46-5
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.372
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: N-methyl perfluorooctanesulfonamidoacetic acid
Cas No: 2355-31-9
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.372
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoro-3-methoxypropanoic acid
Cas No: 377-73-1
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:

Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.744
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	9-Chlorohexadecafluoro-3-oxanone-1-sulfonic acid
Cas No:	-
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.49
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	1-Decanesulfonic acid, 1,1,2,2,3,3,4,4,5,5,6,6,7,7,8,8,9,9,10,10,10-heneicosafluoro-
Cas No:	335-77-3
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.372
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorobutanesulfonate
Cas No:	45187-15-3
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.372
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;

Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: FtS 8:2 ion
Cas No: 481071-78-7
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.49
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorohexanesulfonate
Cas No: 108427-53-8
Act Media Subdiv Nm: Unknown
Result Detection: PFAS Detected
Result Measure Value Ppt: 1450
Result Measure Value: 1.450000
Result Unit of Measure: ng/g
Detection Quantitation Limit T:
Detection Quantitation Measure:
Detection Quantitation Unit Of:
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:

Sample Result(s)

Pfas Chemical Name: Perfluorovaleric acid
Cas No: 2706-90-3
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: .744
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: FtS 4:2 ion
Cas No: 414911-30-1
Act Media Subdiv Nm: Unknown

Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.49
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorododecanoic acid
Cas No:	307-55-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.372
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Hexafluoropropylene oxide dimer acid
Cas No:	13252-13-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.41
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Decanoic acid, 4,4,5,5,6,6,7,7,8,8,9,9,10,10,10-pentadecafluoro-
Cas No:	812-70-4
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	9.3
Detection Quantitation Unit Of:	ng/g

Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorononanoic acid
Cas No: 375-95-1
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.372
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoro(2-ethoxyethane)sulfonic acid
Cas No: 113507-82-7
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.372
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -

Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.372
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoropentanesulfonate
Cas No: 175905-36-9
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.372
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Sulfluramid
Cas No: 4151-50-2
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.428
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorobutanoate
Cas No:	45048-62-2
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.49
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorotridecanoic acid
Cas No:	72629-94-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.372
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorononanesulfonate
Cas No:	474511-07-4
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.372
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoro(4-methoxybutanoic) acid
Cas No:	863090-89-5
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	

Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.372
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Project Detail(s)

Activity Identifier:	MNPCA-LD00584.2112070010.000ST
Location Name:	Duluth Airport Study Area
Fish Species:	
Environmental Media Name:	Tissue
Activity Type Code:	Sample-Routine
Project Identifier:	PRJ08167
Project Name:	Minnesota DNR PFAS in White-tailed deer livers/waterfowl
Project File Url:	
Year:	2021
Qapp Approval Agency Name:	
Qapp Approved:	No

Sample Result(s)

Pfas Chemical Name:	FtS 8:2 ion
Cas No:	481071-78-7
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.58
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Ammonium 4,8-dioxa-3H-perfluorononanoate
Cas No:	958445-44-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.58
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorotridecanoic acid
Cas No:	72629-94-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorononanesulfonate
Cas No:	474511-07-4
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorooctanesulfonamide
Cas No:	754-91-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Decanoic acid, 4,4,5,5,6,6,7,7,8,8,9,9,10,10,10-pentadecafluoro-
Cas No:	812-70-4
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit

Detection Quantitation Measure:	9.9
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorododecanoic acid
Cas No:	307-55-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Sulfluramid
Cas No:	4151-50-2
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.455
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	N-Ethyl-N-(2-hydroxyethyl)perfluorooctanesulfonamide
Cas No:	1691-99-2
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	2.97
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name:	9-Chlorohexadecafluoro-3-oxanone-1-sulfonic acid
Cas No:	-
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.58
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoro(2-ethoxyethane)sulfonic acid
Cas No:	113507-82-7
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	N-ethyl perfluorooctanesulfonamidoacetic acid
Cas No:	2991-50-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorononanoic acid
Cas No:	375-95-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit

Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	FtS 6:2 ion
Cas No:	425670-75-3
Act Media Subdiv Nm:	Unknown
Result Detection:	PFAS Detected
Result Measure Value Ppt:	1080
Result Measure Value:	1.080000
Result Unit of Measure:	ng/g
Detection Quantitation Limit T:	
Detection Quantitation Measure:	
Detection Quantitation Unit Of:	
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (B,J)

Sample Result(s)

Pfas Chemical Name:	Perfluorotetradecanoic acid
Cas No:	376-06-7
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoroundecanoate
Cas No:	196859-54-8
Act Media Subdiv Nm:	Unknown
Result Detection:	PFAS Detected
Result Measure Value Ppt:	162
Result Measure Value:	0.162000
Result Unit of Measure:	ng/g
Detection Quantitation Limit T:	
Detection Quantitation Measure:	
Detection Quantitation Unit Of:	
Analytical Method:	

Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (B,J)

Sample Result(s)

Pfas Chemical Name: Perfluorobutanoate
Cas No: 45048-62-2
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.58
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorohexanoic acid
Cas No: 307-24-4
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.396
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorooctanoic acid
Cas No: 335-67-1
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.396
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoro-3-methoxypropanoic acid
Cas No:	377-73-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.792
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoro-3,6-dioxaheptanoic acid
Cas No:	151772-58-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.792
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name:	Perfluorohexanesulfonate
Cas No:	108427-53-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	N-methylperfluoro-1-octanesulfonamide
Cas No:	31506-32-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit

Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	N-methyl perfluorooctanesulfonamidoacetic acid
Cas No:	2355-31-9
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid
Cas No:	763051-92-9
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.58
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoroheptanesulfonate
Cas No:	146689-46-5
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorodecanoic acid
Cas No:	335-76-2
Act Media Subdiv Nm:	Unknown
Result Detection:	PFAS Detected
Result Measure Value Ppt:	126
Result Measure Value:	0.126000
Result Unit of Measure:	ng/g
Detection Quantitation Limit T:	
Detection Quantitation Measure:	
Detection Quantitation Unit Of:	
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (J)

Sample Result(s)

Pfas Chemical Name:	Hexafluoropropylene oxide dimer acid
Cas No:	13252-13-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.51
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	2H,2H,3H,3H-Perfluorooctanoate
Cas No:	1799325-94-2
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	9.9
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorovaleric acid
Cas No:	2706-90-3
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit

Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.792
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorooctanesulfonate
Cas No:	45298-90-6
Act Media Subdiv Nm:	Unknown
Result Detection:	PFAS Detected
Result Measure Value Ppt:	2210
Result Measure Value:	2.210000
Result Unit of Measure:	ng/g
Detection Quantitation Limit T:	
Detection Quantitation Measure:	
Detection Quantitation Unit Of:	
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	

Sample Result(s)

Pfas Chemical Name:	Perfluorobutanesulfonate
Cas No:	45187-15-3
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	1-Decanesulfonic acid, 1,1,2,2,3,3,4,4,5,5,6,6,7,7,8,8,9,9,10,10,10-heneicosafluoro-
Cas No:	335-77-3
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	

Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoroheptanoic acid
Cas No: 375-85-9
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.396
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorododecanesulfonate
Cas No: 343629-43-6
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.396
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: 3:3 Fluorotelomer carboxylate, ion(1-)
Cas No: 1169706-83-5
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.58
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -

Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.58
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoropentanesulfonate
Cas No:	175905-36-9
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit

Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Project Detail(s)

Activity Identifier:	MNPCA-LD00584.2112070004.000ST
Location Name:	Duluth Airport Study Area
Fish Species:	
Environmental Media Name:	Tissue
Activity Type Code:	Sample-Routine
Project Identifier:	PRJ08167
Project Name:	Minnesota DNR PFAS in White-tailed deer livers/waterfowl
Project File Url:	
Year:	2021
Qapp Approval Agency Name:	
Qapp Approved:	No

Sample Result(s)

Pfas Chemical Name:	Perfluorododecanoic acid
Cas No:	307-55-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.486
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoroheptanesulfonate
Cas No:	146689-46-5
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.486
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	2-(N-methylperfluoro-1-octanesulfonamido)-ethanol

Cas No:	24448-09-7
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	4.86
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name:	1-Decanesulfonic acid, 1,1,2,2,3,3,4,4,5,5,6,6,7,7,8,8,9,9,10,10,10-heneicosafluoro-
Cas No:	335-77-3
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.486
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorobutanesulfonate
Cas No:	45187-15-3
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.486
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorooctanoic acid
Cas No:	335-67-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation	0.486

Measure:
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoropentanesulfonate
Cas No: 175905-36-9
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.486
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoro-3,6-dioxaheptanoic acid
Cas No: 151772-58-6
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.972
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name: Perfluorononanoic acid
Cas No: 375-95-1
Act Media Subdiv Nm: Unknown
Result Detection: PFAS Detected
Result Measure Value Ppt: 485
Result Measure Value: 0.485000
Result Unit of Measure: ng/g
Detection Quantitation Limit T:
Detection Quantitation Measure:
Detection Quantitation Unit Of:
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (J)

Sample Result(s)

Pfas Chemical Name:	N-methylperfluoro-1-octanesulfonamide
Cas No:	31506-32-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.486
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoro(2-ethoxyethane)sulfonic acid
Cas No:	113507-82-7
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.486
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	N-Ethyl-N-(2-hydroxyethyl)perfluorooctanesulfonamide
Cas No:	1691-99-2
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	3.64
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name:	Perfluorohexanoic acid
Cas No:	307-24-4
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-

Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.486
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoroundecanoate
Cas No: 196859-54-8
Act Media Subdiv Nm: Unknown
Result Detection: PFAS Detected
Result Measure Value Ppt: 150
Result Measure Value: 0.150000
Result Unit of Measure: ng/g
Detection Quantitation Limit T:
Detection Quantitation Measure:
Detection Quantitation Unit Of:
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (B,J)

Sample Result(s)

Pfas Chemical Name: 2H,2H,3H,3H-Perfluorooctanoate
Cas No: 1799325-94-2
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 12.2
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: N-ethyl perfluorooctanesulfonamidoacetic acid
Cas No: 2991-50-6
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.486
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:

Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorohexanesulfonate
Cas No:	108427-53-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.486
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Hexafluoropropylene oxide dimer acid
Cas No:	13252-13-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.85
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorooctanesulfonamide
Cas No:	754-91-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.486
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorovaleric acid
Cas No:	2706-90-3

Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.972
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Ammonium 4,8-dioxa-3H-perfluorononanoate
Cas No:	958445-44-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.94
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorononanesulfonate
Cas No:	474511-07-4
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-

Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorononanesulfonate
Cas No:	474511-07-4
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.653
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	N-methyl perfluorooctanesulfonamidoacetic acid
Cas No:	2355-31-9
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.653
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorohexanesulfonate
Cas No:	108427-53-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.653
Detection Quantitation Unit Of:	ng/g

Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoropentanesulfonate
Cas No: 175905-36-9
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.653
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: FtS 8:2 ion
Cas No: 481071-78-7
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 2.61
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: 11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid
Cas No: 763051-92-9
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 2.61
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorovaleric acid
Cas No: 2706-90-3
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.31
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorooctanoic acid
Cas No: 335-67-1
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.653
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoro-3,6-dioxaheptanoic acid
Cas No: 151772-58-6
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.31
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name: Sulfluramid
Cas No: 4151-50-2
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:

Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.751
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name:	Perfluoroheptanesulfonate
Cas No:	146689-46-5
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-

Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;

Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: 1-Decanesulfonic acid, 1,1,2,2,3,3,4,4,5,5,6,6,7,7,8,8,9,9,10,10,10-heneicosafluoro-
Cas No: 335-77-3
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.653
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorooctanesulfonamide
Cas No: 754-91-6
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.653
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Hexafluoropropylene oxide dimer acid
Cas No: 13252-13-6
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 2.48
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorodecanoic acid
Cas No: 335-76-2
Act Media Subdiv Nm: Unknown

Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.653
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	9-Chlorohexadecafluoro-3-oxanone-1-sulfonic acid
Cas No:	-
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	2.61
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorododecanesulfonate
Cas No:	343629-43-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.653
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	2-(N-methylperfluoro-1-octanesulfonamido)-ethanol
Cas No:	24448-09-7
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	6.53
Detection Quantitation Unit Of:	ng/g

Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U,H)

Project Detail(s)

Activity Identifier: MNPCA-LD00584.2112070009.000ST
Location Name: Duluth Airport Study Area
Fish Species:
Environmental Media Name: Tissue
Activity Type Code: Sample-Routine
Project Identifier: PRJ08167
Project Name: Minnesota DNR PFAS in White-tailed deer livers/waterfowl
Project File Url:
Year: 2021
Qapp Approval Agency Name:
Qapp Approved: No

Sample Result(s)

Pfas Chemical Name: Perfluorooctanesulfonate
Cas No: 45298-90-6
Act Media Subdiv Nm: Unknown
Result Detection: PFAS Detected
Result Measure Value Ppt: 2030
Result Measure Value: 2.030000
Result Unit of Measure: ng/g
Detection Quantitation Limit T:
Detection Quantitation Measure:
Detection Quantitation Unit Of:
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:

Sample Result(s)

Pfas Chemical Name: 9-Chlorohexadecafluoro-3-oxanone-1-sulfonic acid
Cas No: -
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.58
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorohexanesulfonate
Cas No: 108427-53-8
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit

Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorotridecanoic acid
Cas No:	72629-94-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit

Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.58
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorododecanoic acid
Cas No:	307-55-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoro-3-methoxypropanoic acid
Cas No:	377-73-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.792
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Ammonium 4,8-dioxa-3H-perfluorononanoate
Cas No:	958445-44-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.58
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoro(2-ethoxyethane)sulfonic acid
Cas No:	113507-82-7
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit

Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	2H,2H,3H,3H-Perfluorooctanoate
Cas No:	1799325-94-2
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	9.9
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoropentanesulfonate
Cas No:	175905-36-9
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	3:3 Fluorotelomer carboxylate, ion(1-)
Cas No:	1169706-83-5
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.58
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorooctanoic acid
Cas No:	335-67-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	N-ethyl perfluorooctanesulfonamidoacetic acid
Cas No:	2991-50-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorobutanesulfonate
Cas No:	45187-15-3
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Hexafluoropropylene oxide dimer acid
Cas No:	13252-13-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit

Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.51
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: N-methyl perfluorooctanesulfonamidoacetic acid
Cas No: 2355-31-9
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.396
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Sulfluramid
Cas No: 4151-50-2
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.455
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name: FtS 8:2 ion
Cas No: 481071-78-7
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.58
Detection Quantitation Unit Of: ng/g
Analytical Method:

Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorononanoic acid
Cas No:	375-95-1
Act Media Subdiv Nm:	Unknown
Result Detection:	PFAS Detected
Result Measure Value Ppt:	528
Result Measure Value:	0.528000
Result Unit of Measure:	ng/g
Detection Quantitation Limit T:	
Detection Quantitation Measure:	
Detection Quantitation Unit Of:	
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	

Sample Result(s)

Pfas Chemical Name:	Perfluorononanesulfonate
Cas No:	474511-07-4
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	2-(N-methylperfluoro-1-octanesulfonamido)-ethanol
Cas No:	24448-09-7
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	3.96
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name:	Perfluoro-3,6-dioxaheptanoic acid
Cas No:	151772-58-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.792
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name:	N-Ethyl-N-(2-hydroxyethyl)perfluorooctanesulfonamide
Cas No:	1691-99-2
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	2.97
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name:	N-methylperfluoro-1-octanesulfonamide
Cas No:	31506-32-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorobutanoate
Cas No:	45048-62-2
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit

Detection Quantitation Measure:	1.58
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Decanoic acid, 4,4,5,5,6,6,7,7,8,8,9,9,10,10,10-pentadecafluoro-
Cas No:	812-70-4
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	9.9
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorotetradecanoic acid
Cas No:	376-06-7
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	FtS 4:2 ion
Cas No:	414911-30-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.58
Detection Quantitation Unit Of:	ng/g

Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorodecanoic acid
Cas No:	335-76-2
Act Media Subdiv Nm:	Unknown
Result Detection:	PFAS Detected
Result Measure Value Ppt:	178
Result Measure Value:	0.178000
Result Unit of Measure:	ng/g
Detection Quantitation Limit T:	
Detection Quantitation Measure:	
Detection Quantitation Unit Of:	
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (J)

Sample Result(s)

Pfas Chemical Name:	Perfluoroundecanoate
Cas No:	196859-54-8
Act Media Subdiv Nm:	Unknown
Result Detection:	PFAS Detected
Result Measure Value Ppt:	198
Result Measure Value:	0.198000
Result Unit of Measure:	ng/g
Detection Quantitation Limit T:	
Detection Quantitation Measure:	
Detection Quantitation Unit Of:	
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (B,J)

Sample Result(s)

Pfas Chemical Name:	Perfluorohexanoic acid
Cas No:	307-24-4
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoro(4-methoxybutanoic) acid
Cas No:	863090-89-5
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit

Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorovaleric acid
Cas No:	2706-90-3
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	.792
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorododecanesulfonate
Cas No:	343629-43-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoroheptanoic acid
Cas No:	375-85-9
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.396
Detection Quantitation Unit Of:	ng/g
Analytical Method:	

Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Project Detail(s)

Activity Identifier: MNPCA-LD00584.2112070005.000ST
Location Name: Duluth Airport Study Area
Fish Species:
Environmental Media Name: Tissue
Activity Type Code: Sample-Routine
Project Identifier: PRJ08167
Project Name: Minnesota DNR PFAS in White-tailed deer livers/waterfowl
Project File Url:
Year: 2021
Qapp Approval Agency Name:
Qapp Approved: No

Sample Result(s)

Pfas Chemical Name: Perfluoro(2-ethoxyethane)sulfonic acid
Cas No: 113507-82-7
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.585
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: 1-Decanesulfonic acid, 1,1,2,2,3,3,4,4,5,5,6,6,7,7,8,8,9,9,10,10,10-heneicosafluoro-
Cas No: 335-77-3
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.585
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: N-methyl perfluorooctanesulfonamidoacetic acid
Cas No: 2355-31-9
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -

Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.585
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Decanoic acid, 4,4,5,5,6,6,7,7,8,8,9,9,10,10,10-pentadecafluoro-
Cas No:	812-70-4
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	14.6
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoro-3-methoxypropanoic acid
Cas No:	377-73-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.17
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	N-ethyl perfluorooctanesulfonamidoacetic acid
Cas No:	2991-50-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.585
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-

Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorohexanesulfonate
Cas No: 108427-53-8
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.585
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: FtS 4:2 ion
Cas No: 414911-30-1
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 2.34
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoroheptanoic acid
Cas No: 375-85-9
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.585
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorododecanesulfonate

Cas No:	343629-43-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.585
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorovaleric acid
Cas No:	2706-90-3
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.17
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Sulfluramid
Cas No:	4151-50-2
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.673
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	2H,2H,3H,3H-Perfluorooctanoate
Cas No:	1799325-94-2
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation	14.6

Measure:	
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Hexafluoropropylene oxide dimer acid
Cas No:	13252-13-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	2.22
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoroundecanoate
Cas No:	196859-54-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.585
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid
Cas No:	763051-92-9
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	2.34
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	N-Ethyl-N-(2-hydroxyethyl)perfluorooctanesulfonamide
Cas No:	1691-99-2
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	4.39
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name:	Perfluorodecanoic acid
Cas No:	335-76-2
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.585
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorododecanoic acid
Cas No:	307-55-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.585
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorooctanesulfonamide
Cas No:	754-91-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-

Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.585
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorononanoic acid
Cas No: 375-95-1
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.585
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: 9-Chlorohexadecafluoro-3-oxanone-1-sulfonic acid
Cas No: -
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 2.34
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorononanesulfonate
Cas No: 474511-07-4
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.585
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:

Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorotetradecanoic acid
Cas No: 376-06-7
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.585
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: N-methylperfluoro-1-octanesulfonamide
Cas No: 31506-32-8
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.585
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorobutanoate
Cas No: 45048-62-2
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 2.34
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorooctanesulfonate
Cas No: 45298-90-6

Act Media Subdiv Nm:	Unknown
Result Detection:	PFAS Detected
Result Measure Value Ppt:	1220
Result Measure Value:	1.220000
Result Unit of Measure:	ng/g
Detection Quantitation Limit T:	
Detection Quantitation Measure:	
Detection Quantitation Unit Of:	
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	

Sample Result(s)

Pfas Chemical Name:	Perfluorotridecanoic acid
Cas No:	72629-94-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.585
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoroheptanesulfonate
Cas No:	146689-46-5
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.585
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoropentanesulfonate
Cas No:	175905-36-9
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.585

Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	FtS 8:2 ion
Cas No:	481071-78-7
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	2.34
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorohexanoic acid
Cas No:	307-24-4
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.585
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorooctanoic acid
Cas No:	335-67-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.585
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	3:3 Fluorotelomer carboxylate, ion(1-)
Cas No:	1169706-83-5
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	2.34
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Ammonium 4,8-dioxa-3H-perfluorononanoate
Cas No:	958445-44-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	2.34
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	FtS 6:2 ion
Cas No:	425670-75-3
Act Media Subdiv Nm:	Unknown
Result Detection:	PFAS Detected
Result Measure Value Ppt:	2300
Result Measure Value:	2.300000
Result Unit of Measure:	ng/g
Detection Quantitation Limit T:	
Detection Quantitation Measure:	
Detection Quantitation Unit Of:	
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (B)

Sample Result(s)

Pfas Chemical Name:	Perfluoro-3,6-dioxaheptanoic acid
Cas No:	151772-58-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-

Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.17
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name: 2-(N-methylperfluoro-1-octanesulfonamido)-ethanol
Cas No: 24448-09-7
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 5.85
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name: Perfluoro(4-methoxybutanoic) acid
Cas No: 863090-89-5
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.585
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorobutanesulfonate
Cas No: 45187-15-3
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.585
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:

Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Project Detail(s)

Activity Identifier: MNPCA-LD00584.2112070003.000ST
Location Name: Duluth Airport Study Area
Fish Species:
Environmental Media Name: Tissue
Activity Type Code: Sample-Routine
Project Identifier: PRJ08167
Project Name: Minnesota DNR PFAS in White-tailed deer livers/waterfowl
Project File Url:
Year: 2021
Qapp Approval Agency Name:
Qapp Approved: No

Sample Result(s)

Pfas Chemical Name: 9-Chlorohexadecafluoro-3-oxanone-1-sulfonic acid
Cas No: -
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.83
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: 3:3 Fluorotelomer carboxylate, ion(1-)
Cas No: 1169706-83-5
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.83
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoro(2-ethoxyethane)sulfonic acid
Cas No: 113507-82-7
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:

Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.457
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid
Cas No:	763051-92-9
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.83
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoro-3,6-dioxaheptanoic acid
Cas No:	151772-58-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.914
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name:	Perfluorononanesulfonate
Cas No:	474511-07-4
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.457
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;

Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: FtS 4:2 ion
Cas No: 414911-30-1
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.83
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorodecanoic acid
Cas No: 335-76-2
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.457
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorobutanesulfonate
Cas No: 45187-15-3
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.457
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Decanoic acid, 4,4,5,5,6,6,7,7,8,8,9,9,10,10,10-pentadecafluoro-
Cas No: 812-70-4
Act Media Subdiv Nm: Unknown

Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	11.4
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorooctanesulfonamide
Cas No:	754-91-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.457
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	1-Decanesulfonic acid, 1,1,2,2,3,3,4,4,5,5,6,6,7,7,8,8,9,9,10,10,10-heneicosafluoro-
Cas No:	335-77-3
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.457
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	2H,2H,3H,3H-Perfluorooctanoate
Cas No:	1799325-94-2
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	11.4
Detection Quantitation Unit Of:	ng/g

Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorotetradecanoic acid
Cas No: 376-06-7
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.457
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Sulfluramid
Cas No: 4151-50-2
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.526
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoro(4-methoxybutanoic) acid
Cas No: 863090-89-5
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.457
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorobutanoate
Cas No: 45048-62-2
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.83
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorononanoic acid
Cas No: 375-95-1
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.457
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoroheptanoic acid
Cas No: 375-85-9
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.457
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Ammonium 4,8-dioxa-3H-perfluorononanoate
Cas No: 958445-44-8
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:

Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.83
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Hexafluoropropylene oxide dimer acid
Cas No:	13252-13-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.74
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	FtS 8:2 ion
Cas No:	481071-78-7
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.83
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorohexanoic acid
Cas No:	307-24-4
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.457
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;

Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoropentanesulfonate
Cas No: 175905-36-9
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.457
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorododecanoic acid
Cas No: 307-55-1
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.457
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: N-methyl perfluorooctanesulfonamidoacetic acid
Cas No: 2355-31-9
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.457
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoroundecanoate
Cas No: 196859-54-8
Act Media Subdiv Nm: Unknown

Result Detection:	PFAS Detected
Result Measure Value Ppt:	117
Result Measure Value:	0.117000
Result Unit of Measure:	ng/g
Detection Quantitation Limit T:	
Detection Quantitation Measure:	
Detection Quantitation Unit Of:	
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (B,J)

Sample Result(s)

Pfas Chemical Name:	Perfluorohexanesulfonate
Cas No:	108427-53-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.457
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorooctanesulfonate
Cas No:	45298-90-6
Act Media Subdiv Nm:	Unknown
Result Detection:	PFAS Detected
Result Measure Value Ppt:	1290
Result Measure Value:	1.290000
Result Unit of Measure:	ng/g
Detection Quantitation Limit T:	
Detection Quantitation Measure:	
Detection Quantitation Unit Of:	
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	

Sample Result(s)

Pfas Chemical Name:	Perfluoro-3-methoxypropanoic acid
Cas No:	377-73-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.914
Detection Quantitation Unit Of:	ng/g

Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoroheptanesulfonate
Cas No: 146689-46-5
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.457
Detection Quantitation Unit Of: ng/g

Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;

Result Comment: Lab qualifier: (U)

Project Detail(s)

Activity Identifier: MNPCA-LD00584.2112070001.000ST
Location Name: Duluth Airport Study Area
Fish Species:
Environmental Media Name: Tissue
Activity Type Code: Sample-Routine
Project Identifier: PRJ08167
Project Name: Minnesota DNR PFAS in White-tailed deer livers/waterfowl
Project File Url:
Year: 2021
Qapp Approval Agency Name:
Qapp Approved: No

Sample Result(s)

Pfas Chemical Name: N-Ethyl-N-(2-hydroxyethyl)perfluorooctanesulfonamide
Cas No: 1691-99-2
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 4.06
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name: Ammonium 4,8-dioxa-3H-perfluorononanoate
Cas No: 958445-44-8
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 2.17
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: FtS 8:2 ion
Cas No: 481071-78-7
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit

Detection Quantitation Measure:	2.17
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	N-methylperfluoro-1-octanesulfonamide
Cas No:	31506-32-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.542
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	FtS 6:2 ion
Cas No:	425670-75-3
Act Media Subdiv Nm:	Unknown
Result Detection:	PFAS Detected
Result Measure Value Ppt:	650
Result Measure Value:	0.650000
Result Unit of Measure:	ng/g
Detection Quantitation Limit T:	
Detection Quantitation Measure:	
Detection Quantitation Unit Of:	
Analytical Method:	
Analysis Start Date:	-

Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (B,J)

Sample Result(s)

Pfas Chemical Name:	Hexafluoropropylene oxide dimer acid
Cas No:	13252-13-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	2.06
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoro(2-ethoxyethane)sulfonic acid
Cas No:	113507-82-7
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.542
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorobutanesulfonate
Cas No:	45187-15-3
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.542
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Decanoic acid, 4,4,5,5,6,6,7,7,8,8,9,9,10,10,10-pentadecafluoro-
Cas No:	812-70-4
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	13.5
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	N-ethyl perfluorooctanesulfonamidoacetic acid
Cas No:	2991-50-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit

Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.542
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoro-3-methoxypropanoic acid
Cas No: 377-73-1
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.08
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorohexanesulfonate
Cas No: 108427-53-8
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit

Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.542
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoro-3,6-dioxaheptanoic acid
Cas No:	151772-58-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.08
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name:	Perfluorotridecanoic acid
Cas No:	72629-94-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit

Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.542
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoroheptanoic acid
Cas No: 375-85-9
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.542
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: 2-(N-methylperfluoro-1-octanesulfonamido)-ethanol
Cas No: 24448-09-7
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 5.42
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name: 3:3 Fluorotelomer carboxylate, ion(1-)
Cas No: 1169706-83-5
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 2.17
Detection Quantitation Unit Of: ng/g
Analytical Method:

Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoropentanesulfonate
Cas No: 175905-36-9
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.542
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Sulfluramid
Cas No: 4151-50-2
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.623
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: 1-Decanesulfonic acid, 1,1,2,2,3,3,4,4,5,5,6,6,7,7,8,8,9,9,10,10,10-heneicosafluoro-
Cas No: 335-77-3
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.542
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorododecanoic acid
Cas No:	307-55-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.542
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorooctanesulfonate
Cas No:	45298-90-6
Act Media Subdiv Nm:	Unknown
Result Detection:	PFAS Detected
Result Measure Value Ppt:	1780
Result Measure Value:	1.780000
Result Unit of Measure:	ng/g
Detection Quantitation Limit T:	
Detection Quantitation Measure:	
Detection Quantitation Unit Of:	
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	

Sample Result(s)

Pfas Chemical Name:	FtS 4:2 ion
Cas No:	414911-30-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	2.17
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid
Cas No:	763051-92-9
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit

Detection Quantitation Measure:	2.17
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorotetradecanoic acid
Cas No:	376-06-7
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.542
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorodecanoic acid
Cas No:	335-76-2
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.542
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoroheptanesulfonate
Cas No:	146689-46-5
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.542
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Project Detail(s)

Activity Identifier: MNPCA-LD00584.2112070002.000ST
Location Name: Duluth Airport Study Area
Fish Species:
Environmental Media Name: Tissue
Activity Type Code: Sample-Routine
Project Identifier: PRJ08167
Project Name: Minnesota DNR PFAS in White-tailed deer livers/waterfowl
Project File Url:
Year: 2021
Qapp Approval Agency Name:
Qapp Approved: No

Sample Result(s)

Pfas Chemical Name: Perfluoropentanesulfonate
Cas No: 175905-36-9
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.552
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: N-ethyl perfluorooctanesulfonamidoacetic acid
Cas No: 2991-50-6
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.552
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Ammonium 4,8-dioxa-3H-perfluorononanoate
Cas No: 958445-44-8
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation 2.21

Measure:
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: 2-(N-methylperfluoro-1-octanesulfonamido)-ethanol
Cas No: 24448-09-7
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 5.52
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name: Perfluorobutanesulfonate
Cas No: 45187-15-3
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.552
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorododecanesulfonate
Cas No: 343629-43-6
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.552
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorooctanesulfonate
Cas No:	45298-90-6
Act Media Subdiv Nm:	Unknown
Result Detection:	PFAS Detected
Result Measure Value Ppt:	1250
Result Measure Value:	1.250000
Result Unit of Measure:	ng/g
Detection Quantitation Limit T:	
Detection Quantitation Measure:	
Detection Quantitation Unit Of:	
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	

Sample Result(s)

Pfas Chemical Name:	Perfluoroheptanoic acid
Cas No:	375-85-9
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.552
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	3:3 Fluorotelomer carboxylate, ion(1-)
Cas No:	1169706-83-5
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	2.21
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorovaleric acid
Cas No:	2706-90-3
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-

Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.1
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoro(2-ethoxyethane)sulfonic acid
Cas No: 113507-82-7
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.552
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Decanoic acid, 4,4,5,5,6,6,7,7,8,8,9,9,10,10,10-pentadecafluoro-
Cas No: 812-70-4
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 13.8
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorooctanesulfonamide
Cas No: 754-91-6
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.552
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:

Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorotetradecanoic acid
Cas No: 376-06-7
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.552
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Sulfluramid
Cas No: 4151-50-2
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.634
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: N-Ethyl-N-(2-hydroxyethyl)perfluorooctanesulfonamide
Cas No: 1691-99-2
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 4.14
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name: Perfluorodecanoic acid
Cas No: 335-76-2

Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.552
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: N-methylperfluoro-1-octanesulfonamide
Cas No: 31506-32-8
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.552
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorononanoic acid
Cas No: 375-95-1
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.552
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: 9-Chlorohexadecafluoro-3-oxanone-1-sulfonic acid
Cas No: -
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 2.21

Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoro-3,6-dioxaheptanoic acid
Cas No:	151772-58-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.1
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U,H)

Sample Result(s)

Pfas Chemical Name:	Perfluoro(4-methoxybutanoic) acid
Cas No:	863090-89-5
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.552
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorooctanoic acid
Cas No:	335-67-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.552
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorononanesulfonate
Cas No:	474511-07-4
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.552
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	FtS 6:2 ion
Cas No:	425670-75-3
Act Media Subdiv Nm:	Unknown
Result Detection:	PFAS Detected
Result Measure Value Ppt:	913
Result Measure Value:	0.913000
Result Unit of Measure:	ng/g
Detection Quantitation Limit T:	
Detection Quantitation Measure:	
Detection Quantitation Unit Of:	
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (B,J)

Sample Result(s)

Pfas Chemical Name:	Perfluorobutanoate
Cas No:	45048-62-2
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	2.21
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorohexanoic acid
Cas No:	307-24-4
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-

Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.552
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: N-methyl perfluorooctanesulfonamidoacetic acid
Cas No: 2355-31-9
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.552
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Hexafluoropropylene oxide dimer acid
Cas No: 13252-13-6
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 2.1
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorotridecanoic acid
Cas No: 72629-94-8
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.552
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:

Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;

Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	FtS 4:2 ion
Cas No:	414911-30-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	2.21
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	2H,2H,3H,3H-Perfluorooctanoate
Cas No:	1799325-94-2
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	13.8
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid
Cas No:	763051-92-9

Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	2.21
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoro-3-methoxypropanoic acid
Cas No:	377-73-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.1
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoroundecanoate
Cas No:	196859-54-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.552
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorohexanesulfonate
Cas No:	108427-53-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.552

Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	FtS 8:2 ion
Cas No:	481071-78-7
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	2.21
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorododecanoic acid
Cas No:	307-55-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.552
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	1-Decanesulfonic acid, 1,1,2,2,3,3,4,4,5,5,6,6,7,7,8,8,9,9,10,10,10-heneicosafluoro-
Cas No:	335-77-3
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.552
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	each sample = 4 subsets of a single deer liver, totaling 100g ;
Result Comment:	Lab qualifier: (U)

Project Detail(s)

Activity Identifier: MNPCA-LD00584.2104260020.000ST
Location Name: Duluth Airport Study Area
Fish Species:
Environmental Media Name: Tissue
Activity Type Code: Sample-Routine
Project Identifier: PRJ08167
Project Name: Minnesota DNR PFAS in White-tailed deer livers/waterfowl
Project File Url:
Year: 2021
Qapp Approval Agency Name:
Qapp Approved: No

Sample Result(s)

Pfas Chemical Name: Perfluorooctanoic acid
Cas No: 335-67-1
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.395
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: 1 subset of hunter harvested muscle, <100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorooctanesulfonate
Cas No: 45298-90-6
Act Media Subdiv Nm: Unknown
Result Detection: PFAS Detected
Result Measure Value Ppt: 221
Result Measure Value: 0.221000
Result Unit of Measure: ng/g
Detection Quantitation Limit T:
Detection Quantitation Measure:
Detection Quantitation Unit Of:
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: 1 subset of hunter harvested muscle, <100g ;
Result Comment: Lab qualifier: (B,J)

Sample Result(s)

Pfas Chemical Name: Decanoic acid, 4,4,5,5,6,6,7,7,8,8,9,9,10,10,10-pentadecafluoro-
Cas No: 812-70-4
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 9.88
Detection Quantitation Unit Of: ng/g

Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: 1 subset of hunter harvested muscle, <100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: N-ethyl perfluorooctanesulfonamidoacetic acid
Cas No: 2991-50-6
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.395
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: 1 subset of hunter harvested muscle, <100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Sulfluramid
Cas No: 4151-50-2
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.454
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: 1 subset of hunter harvested muscle, <100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: N-methylperfluoro-1-octanesulfonamide
Cas No: 31506-32-8
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.395
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: 1 subset of hunter harvested muscle, <100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	1-Decanesulfonic acid, 1,1,2,2,3,3,4,4,5,5,6,6,7,7,8,8,9,9,10,10,10-heneicosafluoro-
Cas No:	335-77-3
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.395
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	1 subset of hunter harvested muscle, <100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoroundecanoate
Cas No:	196859-54-8
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.395
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	1 subset of hunter harvested muscle, <100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorobutanesulfonate
Cas No:	45187-15-3
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.395
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	1 subset of hunter harvested muscle, <100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	N-methyl perfluorooctanesulfonamidoacetic acid
Cas No:	2355-31-9
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	

Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.395
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	1 subset of hunter harvested muscle, <100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Hexafluoropropylene oxide dimer acid
Cas No:	13252-13-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.5
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	1 subset of hunter harvested muscle, <100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid
Cas No:	763051-92-9
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.58
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	1 subset of hunter harvested muscle, <100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorononanesulfonate
Cas No:	474511-07-4
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.395
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	1 subset of hunter harvested muscle, <100g ;

Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoroheptanoic acid
Cas No: 375-85-9
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.395
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: 1 subset of hunter harvested muscle, <100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: 9-Chlorohexadecafluoro-3-oxanone-1-sulfonic acid
Cas No: -
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.58
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: 1 subset of hunter harvested muscle, <100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorotetradecanoic acid
Cas No: 376-06-7
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.395
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: 1 subset of hunter harvested muscle, <100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorovaleric acid
Cas No: 2706-90-3
Act Media Subdiv Nm: Unknown

Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.79
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	1 subset of hunter harvested muscle, <100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	3:3 Fluorotelomer carboxylate, ion(1-)
Cas No:	1169706-83-5
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.58
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	1 subset of hunter harvested muscle, <100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoro(2-ethoxyethane)sulfonic acid
Cas No:	113507-82-7
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.395
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	1 subset of hunter harvested muscle, <100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorododecanesulfonate
Cas No:	343629-43-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.395
Detection Quantitation Unit Of:	ng/g

Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: 1 subset of hunter harvested muscle, <100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Ammonium 4,8-dioxa-3H-perfluorononanoate
Cas No: 958445-44-8
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.58
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: 1 subset of hunter harvested muscle, <100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: FtS 4:2 ion
Cas No: 414911-30-1
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.58
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: 1 subset of hunter harvested muscle, <100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorohexanesulfonate
Cas No: 108427-53-8
Act Media Subdiv Nm: Unknown
Result Detection: PFAS Detected
Result Measure Value Ppt: 448
Result Measure Value: 0.448000
Result Unit of Measure: ng/g
Detection Quantitation Limit T:
Detection Quantitation Measure:
Detection Quantitation Unit Of:
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: 1 subset of hunter harvested muscle, <100g ;
Result Comment:

Sample Result(s)

Pfas Chemical Name: 2H,2H,3H,3H-Perfluorooctanoate
Cas No: 1799325-94-2
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 9.88
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: 1 subset of hunter harvested muscle, <100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoropentanesulfonate
Cas No: 175905-36-9
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.395
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: 1 subset of hunter harvested muscle, <100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorobutanoate
Cas No: 45048-62-2
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 1.58
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: 1 subset of hunter harvested muscle, <100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorodecanoic acid
Cas No: 335-76-2
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:

Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.395
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	1 subset of hunter harvested muscle, <100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorohexanoic acid
Cas No:	307-24-4
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.395
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	1 subset of hunter harvested muscle, <100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoroheptanesulfonate
Cas No:	146689-46-5
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.395
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	1 subset of hunter harvested muscle, <100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	FtS 8:2 ion
Cas No:	481071-78-7
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	1.58
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	1 subset of hunter harvested muscle, <100g ;

Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluoro(4-methoxybutanoic) acid
Cas No: 863090-89-5
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.395
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: 1 subset of hunter harvested muscle, <100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorooctanesulfonamide
Cas No: 754-91-6
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.395
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: 1 subset of hunter harvested muscle, <100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: Perfluorotridecanoic acid
Cas No: 72629-94-8
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.395
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: 1 subset of hunter harvested muscle, <100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: 2-(N-methylperfluoro-1-octanesulfonamido)-ethanol
Cas No: 24448-09-7
Act Media Subdiv Nm: Unknown

Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	3.95
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	1 subset of hunter harvested muscle, <100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoro-3-methoxypropanoic acid
Cas No:	377-73-1
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.79
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	1 subset of hunter harvested muscle, <100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluoro-3,6-dioxaheptanoic acid
Cas No:	151772-58-6
Act Media Subdiv Nm:	Unknown
Result Detection:	Below Reporting Limit
Result Measure Value Ppt:	-
Result Measure Value:	-
Result Unit of Measure:	
Detection Quantitation Limit T:	Lower Reporting Limit
Detection Quantitation Measure:	0.79
Detection Quantitation Unit Of:	ng/g
Analytical Method:	
Analysis Start Date:	-
Laboratory Accreditation Indic:	
Activity Comment:	1 subset of hunter harvested muscle, <100g ;
Result Comment:	Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name:	Perfluorododecanoic acid
Cas No:	307-55-1

Activity Comment: 1 subset of hunter harvested muscle, <100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: FtS 6:2 ion
Cas No: 425670-75-3
Act Media Subdiv Nm: Unknown
Result Detection: PFAS Detected
Result Measure Value Ppt: 2310
Result Measure Value: 2.310000
Result Unit of Measure: ng/g
Detection Quantitation Limit T:
Detection Quantitation Measure:
Detection Quantitation Unit Of:
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: 1 subset of hunter harvested muscle, <100g ;
Result Comment: Lab qualifier: (B)

Sample Result(s)

Pfas Chemical Name: Perfluorononanoic acid
Cas No: 375-95-1
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 0.395
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: 1 subset of hunter harvested muscle, <100g ;
Result Comment: Lab qualifier: (U)

Sample Result(s)

Pfas Chemical Name: N-Ethyl-N-(2-hydroxyethyl)perfluorooctanesulfonamide
Cas No: 1691-99-2
Act Media Subdiv Nm: Unknown
Result Detection: Below Reporting Limit
Result Measure Value Ppt: -
Result Measure Value: -
Result Unit of Measure:
Detection Quantitation Limit T: Lower Reporting Limit
Detection Quantitation Measure: 2.96
Detection Quantitation Unit Of: ng/g
Analytical Method:
Analysis Start Date: -
Laboratory Accreditation Indic:
Activity Comment: 1 subset of hunter harvested muscle, <100g ;
Result Comment: Lab qualifier: (U,H)

Loc Desc:	Approximate Middle of Investigation area. This site is located south of the main east-west runway in the former USAF central airfield complex, just northeast of the main cirrus MFG facility. The site consists of a aviation and jet fuel storage tank and hydrant system complex and solvent wash rack area. This area in now occupied by paved taxiways. There general investigation areas is about 4 acres. The anticipated remedial footprint is about 2 acrea

Waste Code Desc:	THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F002
Waste Code Desc:	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F003
Waste Code Desc:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F004
Waste Code Desc:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F005
Waste Code Desc:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F027
Waste Code Desc:	DISCARDED UNUSED FORMULATIONS CONTAINING TRI-, TETRA-, OR PENTACHLOROPHENOL OR DISCARDED UNUSED FORMULATIONS CONTAINING COMPOUNDS DERIVED FROM THESE CHLOROPHENOLS. (THIS LISTING DOES NOT INCLUDE FORMULATIONS CONTAINING HEXACHLOROPHENE SYNTHESIZED FROM PREPURIFIED 2,4,5-TRICHLOROPHENOL AS THE SOLE COMPONENT.)
Waste Code:	P004
Waste Code Desc:	1,4,5,8-DIMETHANONAPHTHALENE, 1,2,3,4,10,10-HEXA-CHLORO-1,4,4A,5,8,8A,-HEXAHYDRO-, (1ALPHA, 4ALPHA, 4ABETA, 5ALPHA, 8ALPHA, 8ABETA)- (OR) ALDRIN
Waste Code:	P030
Waste Code Desc:	CYANIDES (SOLUBLE CYANIDE SALTS), NOT OTHERWISE SPECIFIED
Waste Code:	P037
Waste Code Desc:	2,7:3,6-DIMETHANONAPHTH[2,3-B]OXIRENE, 3,4,5,6,9,9-HEXACHLORO-1A,2,2A,3,6,6A,7,7A-OCTAHYDRO-, (1AALPHA, 2BETA, 2AALPHA, 3BETA, 6BETA, 6AALPHA, 7BETA, 7AALPHA)- (OR) DIELDRIN

Waste Code Desc:	ETHANIMIDOTHIOIC ACID, N-[[(METHYLAMINO)CARBONYL]OXY]-, METHYL ESTER (OR) METHOMYL

Waste Code: U002
Waste Code Desc: 2-PROPANONE (I) (OR) ACETONE (I)

Waste Code: U031
Waste Code Desc: 1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)

Waste Code: U032
Waste Code Desc: CALCIUM CHROMATE (OR) CHROMIC ACID H2CRO4, CALCIUM SALT

Waste Code: U075
Waste Code Desc: DICHLORODIFLUOROMETHANE (OR) METHANE, DICHLORODIFLUORO-

Waste Code: U080
Waste Code Desc: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Waste Code: U088
Waste Code Desc: 1,2-BENZENEDICARBOXYLIC ACID, DIETHYL ESTER (OR) DIETHYL PHTHALATE

Waste Code: U103
Waste Code Desc: DIMETHYL SULFATE (OR) SULFURIC ACID, DIMETHYL ESTER

Waste Code: U120
Waste Code Desc: FLUORANTHENE

Waste Code: U129
Waste Code Desc: CYCLOHEXANE, 1,2,3,4,5,6-HEXACHLORO-, (1ALPHA, 2ALPHA, 3BETA, 4ALPHA, 5ALPHA, 6BETA)- (OR) LINDANE

Waste Code: U134
Waste Code Desc: HYDROFLUORIC ACID (C,T) (OR) HYDROGEN FLUORIDE (C,T)

Waste Code: U154
Waste Code Desc: METHANOL (I) (OR) METHYL ALCOHOL (I)

Waste Code: U159
Waste Code Desc: 2-BUTANONE (I,T) (OR) METHYL ETHYL KETONE (MEK) (I,T)

Waste Code: U161
Waste Code Desc: 4-METHYL-2-PENTANONE (I) (OR) METHYL ISOBUTYL KETONE (I) (OR) PENTANOL, 4-METHYL-

Waste Code: U165
Waste Code Desc: NAPHTHALENE

Waste Code: U188
Waste Code Desc: PHENOL

Waste Code: U220
Waste Code Desc: BENZENE, METHYL- (OR) TOLUENE

Waste Code: U226
Waste Code Desc: ETHANE, 1,1,1-TRICHLORO- (OR) METHYL CHLOROFORM

Waste Code: U239
Waste Code Desc: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Waste Code: U249
Waste Code Desc: ZINC PHOSPHIDE ZN3P2, WHEN PRESENT AT CONCENTRATIONS OF 10% OR LESS

Waste Code: U359
Waste Code Desc: ETHANOL, 2-ETHOXY- (OR) ETHYLENE GLYCOL MONOETHYL ETHER

Waste Code:	F001
Waste Code Desc:	THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F002
Waste Code Desc:	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F003
Waste Code Desc:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F004
Waste Code Desc:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F005
Waste Code Desc:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F027
Waste Code Desc:	DISCARDED UNUSED FORMULATIONS CONTAINING TRI-, TETRA-, OR PENTACHLOROPHENOL OR DISCARDED UNUSED FORMULATIONS CONTAINING COMPOUNDS DERIVED FROM THESE CHLOROPHENOLS. (THIS LISTING DOES NOT INCLUDE FORMULATIONS CONTAINING HEXACHLOROPHENE SYNTHESIZED FROM PREPURIFIED 2,4,5-TRICHLOROPHENOL AS THE SOLE COMPONENT.)

Waste Code Desc:	VINYL CHLORIDE
Waste Code:	F001
Waste Code Desc:	THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND

STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Code Desc: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Code Desc: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F004
Waste Code Desc: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Code Desc: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F027
Waste Code Desc: DISCARDED UNUSED FORMULATIONS CONTAINING TRI-, TETRA-, OR PENTACHLOROPHENOL OR DISCARDED UNUSED FORMULATIONS CONTAINING COMPOUNDS DERIVED FROM THESE CHLOROPHENOLS. (THIS LISTING DOES NOT INCLUDE FORMULATIONS CONTAINING HEXACHLOROPHENE SYNTHESIZED FROM PREPURIFIED 2,4,5-TRICHLOROPHENOL AS THE SOLE COMPONENT.)

Waste Code Desc:	2,7:3,6-DIMETHANONAPHTH[2,3-B]OXIRENE, 3,4,5,6,9,9-HEXACHLORO-1A,2,2A,3,6,6A,7,7A-OCTAHYDRO-, (1AALPHA, 2BETA, 2AALPHA, 3BETA, 6BETA, 6AALPHA, 7BETA, 7AALPHA)- (OR) DIELDRIN
Waste Code:	P066
Waste Code Desc:	ETHANIMIDOTHIOIC ACID, N-[[(METHYLAMINO)CARBONYL]OXY]-, METHYL ESTER (OR) METHOMYL
Waste Code:	U002
Waste Code Desc:	2-PROPANONE (I) (OR) ACETONE (I)
Waste Code:	U032

Waste Code Desc: CALCIUM CHROMATE (OR) CHROMIC ACID H2CRO4, CALCIUM SALT

Waste Code: U075
Waste Code Desc: DICHLORODIFLUOROMETHANE (OR) METHANE, DICHLORODIFLUORO-

Waste Code: U080
Waste Code Desc: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Waste Code: U088
Waste Code Desc: 1,2-BENZENEDICARBOXYLIC ACID, DIETHYL ESTER (OR) DIETHYL PHTHALATE

Waste Code: U103
Waste Code Desc: DIMETHYL SULFATE (OR) SULFURIC ACID, DIMETHYL ESTER

Waste Code: U120
Waste Code Desc: FLUORANTHENE

Waste Code: U129
Waste Code Desc: CYCLOHEXANE, 1,2,3,4,5,6-HEXACHLORO-, (1ALPHA, 2ALPHA, 3BETA, 4ALPHA, 5ALPHA, 6BETA)- (OR) LINDANE

Waste Code: U134
Waste Code Desc: HYDROFLUORIC ACID (C,T) (OR) HYDROGEN FLUORIDE (C,T)

Waste Code: U154
Waste Code Desc: METHANOL (I) (OR) METHYL ALCOHOL (I)

Waste Code: U159
Waste Code Desc: 2-BUTANONE (I,T) (OR) METHYL ETHYL KETONE (MEK) (I,T)

Waste Code: U165
Waste Code Desc: NAPHTHALENE

Waste Code: U188
Waste Code Desc: PHENOL

Waste Code: U220
Waste Code Desc: BENZENE, METHYL- (OR) TOLUENE

Waste Code: U226
Waste Code Desc: ETHANE, 1,1,1-TRICHLORO- (OR) METHYL CHLOROFORM

Waste Code: U239
Waste Code Desc: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Waste Code: U249
Waste Code Desc: ZINC PHOSPHIDE ZN3P2, WHEN PRESENT AT CONCENTRATIONS OF 10% OR LESS

Waste Code: U359
Waste Code Desc: ETHANOL, 2-ETHOXY- (OR) ETHYLENE GLYCOL MONOETHYL ETHER

Hazardous Waste Handler Details

Seq No: 18
Receive Date: 20171128
Handler Name: DULUTH AIR NATIONAL GUARD BASE
Fed Waste Generator: 2
Generator Code Description: Small Quantity Generator
Source Type: Implementer
TSD Activity: N

Waste Code Details

Waste Code: D001
Waste Code Desc: IGNITABLE WASTE

Waste Code: D002

Waste Code Desc: CORROSIVE WASTE

Waste Code: D005
Waste Code Desc: BARIUM

Waste Code: D006
Waste Code Desc: CADMIUM

Waste Code: D007
Waste Code Desc: CHROMIUM

Waste Code: D008
Waste Code Desc: LEAD

Waste Code: D035
Waste Code Desc: METHYL ETHYL KETONE

Waste Code: F005
Waste Code Desc: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: MN03
Waste Code Desc: PCB Waste

Waste Code: P066
Waste Code Desc: ETHANIMIDOTHIOIC ACID, N-[[(METHYLAMINO)CARBONYL]OXY]-, METHYL ESTER (OR) METHOMYL

Waste Code: U002
Waste Code Desc: 2-PROPANONE (I) (OR) ACETONE (I)

Waste Code: U056
Waste Code Desc: BENZENE, HEXAHYDRO- (I) (OR) CYCLOHEXANE (I)

Description of Events: PRODUCT IS BOTTOM LOADED AND DRIVER WAS UNAWARE THAT THE EXTERNAL VALVE WAS NOT SEATED PROPERLY UNTIL THE UNLOADING LINE CAP WAS REMOVED AT THE TIME O F DELIVERY. WET LINE LEAKED OUT, APPROX 25 GALLONS, UNLOADING HOSE WAS HOOK ED UP AND THEN PROCEEDED TO COMPLETE UNLOADING. AIRBASE PERSONNEL ASSISTED DRIVER IN CLEAN-UP WITH ABSORBENT MATERIAL. THE SPILL WAS CONTAINED ON A CO NCRETE SLAB UNTIL CLEANUP WAS COMPLETED. TEMPERATURE AT THE TIME OF THIS SH IPMENT WAS APPROX. -20 DEGREES F. MOISTURE GOT INTO VALVE THROUGH CONDENSA TION AND FROZE NOT PERMITTING A TIGHT SEAT ON PREVIOUS LOAD TRANSPORTED.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

National Priority List: NPL

The U.S. Environmental Protection Agency (EPA)'s National Priorities List (NPL) includes the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program, based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. This data includes NPL sites represented as polygons, where available, that can be sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS), and is limited to those sites where the NPL Status reflects the site is 'Currently on the Final NPL (F)' and/or the 'Site is Part of NPL Site (A)'. These site boundaries represent the footprint of a whole site, the sum of all the Operable Units (OUs) and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. As site investigation and remediation progress, OUs may be added, modified or refined. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Jan 18, 2026

National Priority List - Proposed: PROPOSED NPL

Sites proposed by the U.S. Environmental Protection Agency (EPA), the state agency, or concerned citizens for addition to the National Priorities List (NPL) due to contamination by hazardous waste and identified by the EPA as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites represented as polygons, where available, can be sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS). These site boundaries represent the footprint of a whole site, the sum of all the Operable Units (OUs) and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Jan 18, 2026

Deleted NPL: DELETED NPL

Sites deleted from the U.S. Environmental Protection Agency (EPA)'s National Priorities List (NPL). The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites represented as polygons, where available, can be sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS). These site boundaries represent the footprint of a whole site, the sum of all the Operable Units (OUs) and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Jan 18, 2026

SEMS List 8R Active Site Inventory: SEMS

The U.S. Environmental Protection Agency's (EPA) Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. This data includes SEMS sites from the List 8R Active file as well as applicable sites from the EPA's Facility Registry Service map tool. This data may also include applicable sites represented as polygons sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS), and is limited to those sites where the NPL Status reflects the site is 'Not on the NPL (N)' , 'Removed from Proposed (R)', and/or 'Pre-Proposal Site (S)'. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Dec 26, 2025

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

SEMS List 8R Archive Sites: SEMS ARCHIVE

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. This data includes sites from the List 8R Archived site file. This data may also include applicable sites represented as polygons sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS), and is limited to those sites where the NPL Status reflects the site is 'Not on the NPL (N)' , 'Removed from Proposed (R)', and/or 'Pre-Proposal Site (S)'. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Dec 26, 2025

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA). This database was provided by the United States Environmental Protection Agency (EPA). Refer to SEMS LIEN as the current data source for Superfund Liens.

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action: RCRA CORRACTS

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Nov 30, 2025

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites that have indicated engagement in the treatment, storage, or disposal of hazardous waste which requires a RCRA hazardous waste permit.

Government Publication Date: Nov 30, 2025

RCRA Generator List: RCRA LQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste. This list also includes RCRAInfo sites that have notified as LQGs that do not have a registered Site Manager or Certifier in RCRAInfo.

Government Publication Date: Nov 30, 2025

RCRA Small Quantity Generators List: RCRA SQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month. This list also includes RCRAInfo sites that have notified as SQGs that do not have a registered Site Manager or Certifier in RCRAInfo.

Government Publication Date: Nov 30, 2025

RCRA Very Small Quantity Generators List: RCRA VSQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Nov 30, 2025

RCRA Non-Generators: RCRA NON GEN

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Nov 30, 2025

RCRA Sites with Controls: RCRA CONTROLS

List of Resource Conservation and Recovery Act (RCRA) facilities with institutional controls in place. RCRA gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

Government Publication Date: Nov 30, 2025

Federal Engineering Controls-ECs: FED ENG

List of Engineering controls (ECs) made available by the United States Environmental Protection Agency (EPA). ECs encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. The EC listing includes remedy component data from Superfund decision documents for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Jan 30, 2026

Federal Institutional Controls- ICs: FED INST

List of Institutional controls (ICs) made available by the United States Environmental Protection Agency (EPA). ICs are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site. The IC listing includes remedy component data from Superfund decision documents for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Jan 30, 2026

Land Use Controls Information System: LUCIS

The Land Use Controls Information System (LUCIS) database is sourced from the U.S. Department of the Navy (DON). This data contains information for former Base Realignment and Closure (BRAC) properties across the United States. DON's BRAC office was tasked with tracking certain base closures while requiring the prevention of risks to human health and the environment of those properties with LUCs in place. Regarding currently available LUC Sites data, the sites listing is limited to centroid point locations for the overall installation property boundaries. Formerly obtained LUC Sites data may reflect site details that applied previously for a BRAC property.

Government Publication Date: Jun 13, 2024

Institutional Control Boundaries at NPL sites: NPL IC

These boundaries of Institutional Control areas at sites on the U.S. Environmental Protection Agency's (EPA) National Priorities List (NPL), or as Proposed or Deleted, are sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS). The EPA's NPL includes the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. Institutional controls are non-engineered instruments such as administrative and legal controls that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes.

Government Publication Date: Jan 18, 2026

Emergency Response Notification System: ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

Government Publication Date: Feb 8, 2026

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This data is provided by the United States Environmental Protection Agency (EPA) and includes Brownfield sites from the Cleanups in My Community (CIMC) web application.

Government Publication Date: Sep 8, 2025

FEMA Underground Storage Tank Listing: FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Facility Response Plan: FRP

This listing contains facilities that have submitted Facility Response Plans (FRPs) to the U.S. Environmental Protection Agency (EPA). Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit FRPs. Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments. The list includes FRP facilities sourced from the EPA FOIA office and from previously available Homeland Infrastructure Foundation-Level Data (HIFLD) file/s. Disclaimer: Per the EPA FOIA Office, the verification process for current requested FRP data is undergoing review and revision, and any similar reporting will be made public in Fiscal Year 2026. For this reason, the latest available FOIA file may be incomplete.

Government Publication Date: Jun 1, 2025

Delisted Facility Response Plans: DELISTED FRP

Facilities that once appeared in - and have since been removed from - the list of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Jun 1, 2025

Historical Gas Stations: HIST GAS STATIONS

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

Government Publication Date: Jul 1, 1930

Petroleum Refineries: REFN

This list of petroleum refineries is sourced from the U.S. Energy Information Administration (EIA), Refinery Capacity Report. The listing includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year. The geographic area the report covers is the 50 States, the District of Columbia, Puerto Rico, the U.S. Virgin Islands, Guam, and other U.S. possessions. Per the EIA, the facility location data represents the approximate location based on research of publicly available information from sources such as Federal agencies, company websites, and satellite images on public websites.

Government Publication Date: Oct 31, 2024

Petroleum Product and Crude Oil Rail Terminals: BULK TERMINAL

A list of petroleum product and crude oil rail terminals from the U.S. Energy Information Administration (EIA), as well as petroleum terminals sourced from Oak Ridge National Laboratory hosted by the Homeland Infrastructure Foundation-Level Database. Data includes operable bulk petroleum product terminals with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil with activity between 2017 and 2018. EIA petroleum product terminal data comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings.

Government Publication Date: Jun 5, 2025

LIEN on Property: SEMS LIEN

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) provides Lien details on applicable properties, such as the Superfund lien on property activity, the lien property information, and the parties associated with the lien.

Government Publication Date: Dec 26, 2025

Superfund Decision Documents: SUPERFUND ROD

This database contains a list of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include completed Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD) for active and archived sites stored in the Superfund Enterprise Management System (SEMS), along with other associated memos and files. This information is maintained and made available by the U.S. Environmental Protection Agency.

Government Publication Date: Jan 30, 2026

State

Minnesota Permanent List of Priorities: PLP

The state Superfund sites in Minnesota are listed on the Minnesota Permanent List of Priorities (PLP). The hazardous waste sites on the PLP are in various stages of remediation. At these sites investigation and cleanup are needed, cleanup is underway, or cleanup has been completed and long-term monitoring or maintenance continues. This data is made available by the Minnesota Pollution Control Agency (MPCA). This database serves a purpose similar to that of the federal NPL, functioning as a state-level counterpart for prioritizing cleanup efforts at hazardous substance release sites.

Government Publication Date: Feb 26, 2026

Delisted Permanent List of Priorities (PLP): DEL PLP

This list contains sites that were previously included - and have since been removed from - the Permanent List of Priorities (PLP) maintained by Minnesota's Pollution Control Agency (MPCA) but have now been delisted.

Government Publication Date: Feb 26, 2026

Minnesota Site Remediation Section Database: SHWS

The Site Remediation Section identifies, investigates, and determines appropriate cleanup plans for abandoned or uncontrolled hazardous waste sites where a release or potential release of a hazardous substance poses a risk to human health or the environment. This data is made available by the Minnesota Pollution Control Agency (MPCA)'s Site Remediation Section. This database serves a purpose similar to that of the federal Superfund Enterprise Management System (SEMS), functioning as a state-level counterpart for tracking potential hazardous substance release sites.

Government Publication Date: Feb 26, 2026

MPCA Site Assessment and Emergency Response Sites: SITE ASSESSMENT

List of active and closed sites that are currently under site assessment by Minnesota Pollution Control Agency (MPCA) and are a part of MPCA Remediation Sites list, and Emergency Management Sites where a chemical spill or some other environmental incident occurred that required immediate action to protect human health and the environment (includes only Emergency Management Sites that require significant staff involvement).

Government Publication Date: Feb 26, 2026

Permitted Solid Waste Facilities: SWF/LF

A list of permitted solid waste and landfill facilities made available by the Minnesota Pollution Control Agency (MPCA).

Government Publication Date: Mar 3, 2026

Closed Landfills Priority List: LCP

The Minnesota Legislature enacted the Landfill Cleanup Act (LCA) in 1994 to ensure the proper closure and post-closure care at up to 112 closed, permitted municipal sanitary landfills located throughout the state. Based on this legislation, the Minnesota Pollution Control Agency (MPCA) created the Closed Landfill Program (CLP) to administer the LCA mandates. This data made available by The Minnesota Pollution Control Agency (MPCA).

Government Publication Date: Jan 16, 2025

Unpermitted Dump Sites: UNPERMITTED LF

The Minnesota Pollution Control Agency (MPCA) defines "dumps" as those landfills that never held a valid permit from the MPCA. Generally, dumps existed prior to the permitting program established with the creation of the MPCA in 1967. This database is made available by MPCA.

Government Publication Date: Feb 26, 2026

Recycling Markets Directory: RECYCLING

The Recycling Markets Directory is provided by the Minnesota Pollution Control Agency (MPCA). The markets in this database accept large (commercial) quantities of materials.

Government Publication Date: Mar 4, 2026

Historical Leaking Underground Storage Tanks: HIST LUST

A list of leaking underground storage tanks (LUSTs) in the tanks database maintained by the Minnesota Pollution Control Agency (MPCA) up until Nov 01, 2016.

Government Publication Date: Nov 1, 2016

Deleted Leaking Underground Storage Tanks: DEL LUST

A list of leaking underground storage tanks that are often deleted for various reasons. Deletion occurs primarily due to a duplication, or that the source was determined to not be from a tank. This list was provided by Minnesota Pollution Control Agency.

Government Publication Date: Jan 5, 2016

Historical Leaking Aboveground Storage Tanks: HIST LAST

A list of leaking aboveground storage tanks (LASTs) in the tanks database maintained by the Minnesota Pollution Control Agency (MPCA) up until Nov 01, 2016.

Government Publication Date: Nov 1, 2016

Historical Leak Sites: HIST LEAKSITES

A list of leak sites that were neither determined as aboveground nor underground in the tanks database maintained by the Minnesota Pollution Control Agency (MPCA) up until Nov 01, 2016.

Government Publication Date: Nov 1, 2016

MPCA Remediation Leak Sites: LST REM SITE

This is list of leak sites in which the Minnesota Pollution Control Agency (MPCA) is involved in remediation activities. The MPCA publishes this listing.

Government Publication Date: Feb 26, 2026

MPCA Tank Incidents: LST INCIDENT

A list of leaking and registered tank sites in Minnesota that includes locations, details of tank installation and construction, and installed safety measures. This list is provided by Minnesota Pollution Control Agency (MPCA).

Government Publication Date: Feb 23, 2026

Delisted Leaking Storage Tanks: DELISTED LST

This database contains a list of closed leaking storage tank sites that were removed from the Minnesota Pollution Control Agency (MPCA).

Government Publication Date: Feb 26, 2026

Underground Storage Tanks: UST

In Minnesota, there are about 18,000 regulated underground storage tanks (USTs) currently in use. The Underground Storage Tank Program in the Minnesota Pollution Control Agency (MPCA) was created to help prevent contamination caused by leaking tanks. This is a list that contains all regulated USTs. Some types of USTs are exempt from state regulations, such as: tanks with capacity of 110 gallons or less; farm and residential tanks with a 1,100-gallon capacity or less, storing motor fuel for non-commercial purposes, or heating oil for on-site consumption; tanks that contain a minimum concentration of regulated substances; flow-through process tanks; oil-water separators. This data is made available by MPCA.

Government Publication Date: Feb 25, 2026

Minnesota Above Ground Storage Tanks: AST

There are more than 20,000 regulated above-ground storage tanks (ASTs) currently in use across Minnesota. Most tanks located above ground containing liquid substances (i.e., not gaseous or solid at ambient temperature and pressure) are subject to the Minnesota Pollution Control Agency's (MPCA) rules for design and operation of ASTs. This list contains ASTs regulated by MPCA. Some types of ASTs are exempt from the regulations, such as but not limited to the following: ASTs with a capacity of 500 gallons or less; Farm ASTs; Residential ASTs storing 1,100 gallons or less of motor fuel used for noncommercial purposes; ASTs containing hazardous wastes subject to a treatment or storage permit or containing agricultural chemicals regulated under MN Statutes 18B, 18C, 18D; Stormwater collection systems and septic systems. This data is made available by the MPCA.

Government Publication Date: Feb 23, 2026

Tank Sites: HIST TANK

A list of tank sites not included in AST or UST, this list maintained by the Minnesota Pollution Control Agency (MPCA) up until Dec 30, 2016.

Government Publication Date: Dec 30, 2016

Delisted Storage Tanks: DELISTED TANK

This database contains a list of storage tank sites that were removed from the Minnesota Pollution Control Agency (MPCA).

Government Publication Date: Feb 26, 2026

Sites with Institutional Control Events: INST

A list made available by the Minnesota Pollution Control Agency (MPCA) consisting of remediation sites that have various institutional controls in place.

Government Publication Date: Feb 27, 2026

Agricultural Contingency Sites Boundaries: AG CONTINGENCY

The Minnesota Department of Agriculture (MDA) Incident Response Unit (IRU) is the state lead agency for the investigation and remediation of incidents involving agricultural chemicals (pesticides and fertilizer). This MDA IRU database includes sites with a soil or ground water contingency, deed restriction, local ordinance, restrictive covenant or deed affidavit in place. The accuracy of the boundaries of these sites can be variable - in most cases, the site boundaries should be considered as only representing the vicinity of the soil or ground water contingency area or plume.

Government Publication Date: Nov 27, 2025

Petroleum Brownfields Program Sites: BROWNFIELDS

The Minnesota Pollution Control Agency (MPCA)'s Petroleum Brownfields Program handles petroleum contamination under the Petroleum Tank Release Cleanup Act (Minnesota Statutes § 115C). This data is made available by MPCA.

Government Publication Date: Feb 26, 2026

Voluntary Investigation and Cleanup Program List: VIC

The Minnesota Pollution Control Agency's (MPCA) Brownfield Program consists of an integrated program called the Voluntary Investigation and Cleanup (VIC) Program. This program handles hazardous substance contamination under Minnesota's Environmental Response and Liability Act (Minnesota Statutes § 115B). This database is made available by MPCA.

Government Publication Date: Feb 26, 2026

Potential Voluntary Investigation and Cleanup Program Sites: POTENTIAL VIC

This listing of Potential Voluntary Investigation and Cleanup Program sites is provided by the Minnesota Pollution Control Agency (MPCA). These potential sites have not yet entered into the VIC Program until an application has been received at the MPCA.

Government Publication Date: Apr 22, 2016

MPCA Agency Interests: MPCA AI

Facility, site and project locations from the Minnesota Pollution Control Agency's enterprise database, representing locations associated with waste water, storm water, hazardous waste, feedlot, solid waste, tanks, remediation, and other agency programs. Includes records from "What's In My Neighborhood Sites".

Government Publication Date: Jan 27, 2026

Tribal

Leaking Underground Storage Tanks on Tribal/Indian Lands: INDIAN LUST

This list of leaking underground storage tanks (LUSTs) on Tribal/Indian Lands in Region 5, which includes Minnesota, is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Nov 21, 2025

Underground Storage Tanks on Tribal/Indian Lands: INDIAN UST

This list of underground storage tanks (USTs) on Tribal/Indian Lands in Region 5, which includes Minnesota, is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Nov 21, 2025

Delisted Tribal Leaking Storage Tanks: DELISTED INDIAN LST

Leaking Underground Storage Tank (LUST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian LUST lists made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Nov 21, 2025

Delisted Tribal Underground Storage Tanks: DELISTED INDIAN UST

Underground Storage Tank (UST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian UST lists made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Nov 21, 2025

County

No County standard environmental record sources available for this State.

Additional Environmental Record Sources

Federal

PFAS Greenhouse Gas Emissions Data: PFAS GHG

The U.S. Environmental Protection Agency's (EPA) Greenhouse Gas Reporting Program (GHGRP) collects Greenhouse Gas (GHG) data from large emitting facilities (25,000 metric tons of carbon dioxide equivalent (CO2e) per year), and suppliers of fossil fuels and industrial gases that results in GHG emissions when used. This dataset is sourced from the EPA's PFAS Analytic Tools, and it includes GHG emissions data for facilities that emit or have emitted since 2010 chemicals identified as PFAS based on EPA's CompTox Chemicals Dashboard lists of PFAS with defined and undefined structures. PFAS emissions data has been identified for facilities engaged in the following industrial processes: Aluminum Production (GHGRP Subpart F), HCFC-22 Production and HFC-23 Destruction (Subpart O), Electronics Manufacturing (Subpart I), Fluorinated Gas Production (Subpart L), Magnesium Production (Subpart T), Electrical Transmission and Distribution Equipment Use (Subpart DD), and Manufacture of Electric Transmission and Distribution Equipment (Subpart SS). Over time, other industrial processes with required GHGRP reporting may include PFAS emissions data and the list of reportable gases may change over time. Note that some regulatory programs have specified chemical structure requirements that define PFAS differently than the lists in EPA's CompTox Chemicals Dashboard.

Government Publication Date: Mar 2, 2026

On-Scene Coordinator Response Sites: OSC RESPONSE

This list of On-Scene Coordinator (OSC) Response Sites is provided by the U.S. Environmental Protection Agency (EPA). OSCs are the federal officials responsible for monitoring or directing responses to all oil spills and hazardous substance releases reported to the federal government. OSCs coordinate all federal efforts with, and provide support and information to local, state, and regional response communities. An OSC is an agent of either EPA or the U.S. Coast Guard (USCG), depending on where the incident occurs. EPA's OSCs have primary responsibility for spills and releases to inland areas and waters. USCG OSCs have responsibility for coastal waters and the Great Lakes. In general, an OSC has the following key responsibilities during and after a response: Assessment, Monitoring, Response Assistance, and Evaluation.

Government Publication Date: Oct 8, 2025

Facility Registry Service/Facility Index: FINDS/FRS

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the U.S. Environmental Protection Agency (EPA).

Government Publication Date: Jan 1, 2026

Toxics Release Inventory (TRI) Program: TRIS

The U.S. Environmental Protection Agency's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of toxic chemicals from U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. There are currently 770 individually listed chemicals and 33 chemical categories covered by the TRI Program. Facilities that manufacture, process or otherwise use these chemicals in amounts above established levels must submit annual reporting forms for each chemical. Note that the TRI chemical list does not include all toxic chemicals used in the U.S. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment. This database includes TRI Reporting Data for calendar years 1987 through 2021 and Preliminary Data for 2022.

Government Publication Date: Sep 20, 2023

PFOA/PFOS Contaminated Sites: PFAS NPL

This list of Superfund Sites with Per- and Polyfluoroalkyl Substances (PFAS) detections is made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data, previously the list was obtained by EPA FOIA requests. EPA's Office of Land and Emergency Management and EPA Regional Offices maintain what is known about site investigations, contamination, and remedial actions under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) where PFAS is present in the environment. Limitations: Detections of PFAS at National Priorities List (NPL) sites do not mean that people are at risk from PFAS, are exposed to PFAS, or that the site is the source of the PFAS. The information in the Superfund NPL and Superfund Alternative Agreement (SAA) PFAS detection site list is years old and may not be accurate today. Site information such as site name, site ID, and location has been confirmed for accuracy; however, PFAS-related information such as media sampled, drinking water being above the health advisory, or mitigation efforts has not been verified. For Federal Facilities data, the other Federal agencies (OFA) are the lead agency for their data and provided them to EPA.

Government Publication Date: Dec 29, 2025

Federal Agency Locations with Known or Suspected PFAS Detections: PFAS FED SITES

This list of federal agency locations with known or suspected detections of Per- and Polyfluoroalkyl Substances (PFAS) is made available by the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools data. The EPA outlines that these data are gathered from several federal entities, such as the federal Superfund program, Department of Defense (DOD), National Aeronautics and Space Administration (NASA), Department of Transportation (DOT), and Department of Energy (DOE). The dates this data was extracted for the PFAS Analytic Tools range from 2022 to 2025 per agency entity dataset. Sites on this list do not necessarily reflect the source/s of PFAS contamination and detections do not indicate level of risk or human exposure at the site. Agricultural notifications in this data are limited to DOD sites only. At this time, the EPA is aware that this list is not comprehensive of all Federal agencies.

Government Publication Date: May 30, 2025

SSEHRI PFAS Contamination Sites: PFAS SSEHRI

This PFAS Contamination Site Tracker database is compiled by the PFAS Project Lab, part of the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents. Locations for the Known PFAS Contamination Sites are sourced from the PFAS Sites and Community Resources Map by the PFAS-REACH team, credited to PFAS Project Lab, Silent Spring Institute, and PFAS Exchange. Disclaimer: The source conveys the data undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Access the following source link for the most current information: https://pfasproject.com/pfas-sites-and-community-resources/

Government Publication Date: Aug 1, 2025

National Response Center PFAS Spills: PFAS ERNS

This Per- and Poly-Fluoroalkyl Substances (PFAS) Spills dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The National Response Center (NRC), operated by the U.S. Coast Guard, is the designated federal point of contact for reporting all oil, chemical, and other discharges into the environment, for the United States and its territories. This dataset contains NRC spill information from 1990 to the present that is restricted to records associated with PFAS and PFAS-containing materials. Incidents are filtered to include only records with a "Material Involved" or "Incident Description" related to Aqueous Film Forming Foam (AFFF). The keywords used to filter the data included "AFFF," "Fire Fighting Foam," "Aqueous Film Forming Foam," "Fire Suppressant Foam, "PFAS," "PERFL," "PFOA," "PFOS," and "Genx." Limitations: The data from the NRC website contains initial incident data that has not been validated or investigated by a federal/state response agency. Keyword searches may misidentify some incident reports that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS spills/release incidents.

Government Publication Date: Feb 16, 2026

PFAS NPDES Discharge Monitoring: PFAS NPDES

This list of National Pollutant Discharge Elimination System (NPDES) permitted facilities with required monitoring for Per- and Polyfluoroalkyl (PFAS) Substances is made available via the U.S. Environmental Protection Agency (EPA)'s PFAS Analytic Tools. Any point-source wastewater discharger to waters of the United States must have a NPDES permit, which defines a set of parameters for pollutants and monitoring to ensure that the discharge does not degrade water quality or impair human health. This list includes NPDES permitted facilities associated with permits that monitor for Per- and Polyfluoroalkyl Substances (PFAS), limited to the years 2007 - present. EPA further advises the following regarding these data: currently, fewer than half of states have required PFAS monitoring for at least one of their permittees, and fewer states have established PFAS effluent limits for permittees. For states that may have required monitoring, some reporting and data transfer issues may exist on a state-by-state basis.

Government Publication Date: Dec 16, 2024

Perfluorinated Alkyl Substances (PFAS) from Toxic Release Inventory: PFAS TRI

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a per- or polyfluoroalkyl (PFAS) substance included in the U.S. Environmental Protection Agency's (EPA) consolidated PFAS Master List of PFAS Substances. Encompasses Toxics Release Inventory records included in the EPA PFAS Analytic Tools. The EPA's TRI database currently tracks information on disposal or releases of 770 individually listed toxic chemicals and 33 chemical categories from thousands of U.S. facilities and details about how facilities manage those chemicals through recycling, energy recovery, and treatment. This listing includes TRI Reporting Data for calendar years 1987 through 2021 and Preliminary Data for 2022.

Government Publication Date: Sep 20, 2023

PFAS Water Quality Portal Sampling Data: PFAS WATER

This Per- and Poly-Fluoroalkyl Substances (PFAS) Environmental Media Sampling Data is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The Water Quality Portal (WQP), as a cooperative service sponsored by the United States Geological Survey, the EPA, and the National Water Quality Monitoring Council, is part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations, and individuals submit project details and sampling results to this public repository. Limitations: EPA did not carry out the sampling or testing of a majority of the data in the WQP PFAS dataset. EPA can only speak to the accuracy and completeness of the data from projects like the National Aquatic Resource Surveys for which EPA is the data owner/organization. Data may exist within the file on Quality Assurance Project Plans (QAPPs) and the approving agency of the QAPP, if a QAPP is entered.

Government Publication Date: Feb 2, 2026

PFAS TSCA Manufacture and Import Facilities: PFAS TSCA

The U.S. Environmental Protection Agency (EPA) issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. This list is specific only to TSCA Manufacture and Import Facilities with reported per- and poly-fluoroalkyl (PFAS) substances. Data file is sourced from EPA's PFAS Analytic Tools TSCA dataset which includes CDR/Inventory Update Reporting data from 1998 up to 2020. Disclaimer: This data file includes production and importation data for chemicals identified in EPA's CompTox Chemicals Dashboard list of PFAS without explicit structures and list of PFAS structures in DSSTox. Note that some regulations have specific chemical structure requirements that define PFAS differently than the lists in EPA's CompTox Chemicals Dashboard. Reporting information on manufactured or imported chemical substance amounts should not be compared between facilities, as some companies claim Chemical Data Reporting Rule data fields for PFAS information as Confidential Business Information.

Government Publication Date: Jan 5, 2023

PFAS Waste Transfers from RCRA e-Manifest: PFAS E-MANIFEST

This Per- and Poly-Fluoroalkyl Substances (PFAS) Waste Transfers dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. Every shipment of hazardous waste in the U.S. must be accompanied by a shipment manifest, which is a critical component of the cradle-to-grave tracking of wastes mandated by the Resource Conservation and Recovery Act (RCRA). According to the EPA, currently no Federal Waste Code exists for any PFAS compounds. To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: • PFAS • PFOA • PFOS • PERFL • AFFF • GENX • GEN-X (plus the Vermont state-specific waste codes). Limitations: Amount or concentration of PFAS being transferred cannot be determined from the manifest information. Keyword searches may misidentify some manifest records that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS waste transfers.

Government Publication Date: Feb 14, 2026

PFAS Industry Sectors: PFAS IND

This Per- and Poly-Fluoroalkyl Substances (PFAS) Industry Sectors dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The dataset was developed from various sources that show which industries may be handling PFAS including: EPA's Enforcement and Compliance History Online (ECHO) records restricted to potential PFAS-handling industry sectors, based on the North American Industry Classification System (NAICS) Codes and Standard Industrial Classification (SIC) Codes associated federal regulatory programs (e.g., Clean Water Act, Clean Air Act, and Resource Conservation and Recovery Act) at the facility level; ECHO records for Fire Training Sites identified where fire-fighting foam may have been used in training exercises; and 14 CFR Part 139 Airports compiled from historic and current records from the FAA Airport Data and Information Portal. Since July 2006, all certificated Part 139 Airports are required to have fire-fighting foam onsite that meet certain military specifications, which to date have been fluorinated (Aqueous Film Forming Foam). Limitations: Inclusion in this dataset does not indicate that PFAS are being manufactured, processed, used, or released by the facility. Listed facilities potentially handle PFAS based on their industrial profile but are unconfirmed by the EPA. Keyword searches in ECHO for Fire Training sites may misidentify some facilities and should not be considered to be an exhaustive list of fire training facilities in the U.S.

Government Publication Date: Feb 16, 2026

Hazardous Materials Information Reporting System: HMIRS

The Hazardous Materials Incident Reporting System (HMIRS) database contains unintentional hazardous materials release information reported to the U.S. Department of Transportation, Pipeline and Hazardous Materials Safety Administration.

Government Publication Date: Jan 29, 2026

National Clandestine Drug Labs: NCDL

The U.S. Department of Justice ("the Department"), Drug Enforcement Administration (DEA), provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Nov 30, 2023

Toxic Substances Control Act: TSCA

The U.S. Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule. The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI). EPA CDR collections occur approximately every four years and reporting requirements change per collection.

Government Publication Date: May 12, 2022

Hist TSCA: HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.
Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing: FTTS ADMIN
An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.
Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing: FTTS INSP
An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.
Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List: PRP
Early in the site cleanup process, the U.S. Environmental Protection Agency (EPA) conducts a search to find the Potentially Responsible Parties (PRPs). The EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site. This listing contains PRPs, Noticed Parties, at sites in the EPA's Superfund Enterprise Management System (SEMS).
Government Publication Date: Dec 26, 2025

State Coalition for Remediation of Drycleaners Listing: SCRD DRYCLEANER
The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin. Since 2017, the SCRD no longer maintains this data, refer to applicable state source data where available.
Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS): ICIS
The Integrated Compliance Information System (ICIS) database contains integrated enforcement and compliance information across most of U.S. Environmental Protection Agency's (EPA) programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained by the EPA Headquarters and at the Regional offices. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
Government Publication Date: Oct 18, 2025

Drycleaner Facilities: FED DRYCLEANERS
A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) data as made available by the U.S. Environmental Protection Agency (EPA), sourced from the ECHO Exporter file. This EPA source file tracks facilities that possess NAICS and SIC codes that classify businesses as drycleaner establishments.
Government Publication Date: Jan 24, 2026

Delisted Drycleaner Facilities: DELISTED FED DRY
List of sites which once appeared on - and have since been removed from - the list of drycleaner facilities included in Enforcement and Compliance History Online (ECHO) data as made available by the U.S. Environmental Protection Agency (EPA), sourced from the ECHO Exporter file. This EPA source file tracks facilities that possess NAICS and SIC codes that classify businesses as drycleaner establishments.
Government Publication Date: Jan 24, 2026

Formerly Used Defense Sites: FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DOD) is responsible for an environmental restoration. The FUDS Annual Report to Congress (ARC) is published by the U.S. Army Corps of Engineers (USACE). This data is compiled from the USACE's Geospatial FUDS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) FUDS dataset which applies to the Fiscal Year 2021 FUDS Inventory.

Government Publication Date: May 15, 2023

FUDS Munitions Response Sites: FUDS MRS

Boundaries of Munitions Response Sites (MRS), published with the Formerly Used Defense Sites (FUDS) Annual Report to Congress (ARC) by the U.S. Army Corps of Engineers (USACE). An MRS is a discrete location within a Munitions response area (MRA) that is known to require a munitions response. An MRA means any area on a defense site that is known or suspected to contain unexploded ordnance (UXO), discarded military munitions (DMM), or munitions constituents (MC). This data is compiled from the USACE's Geospatial MRS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) MRS dataset.

Government Publication Date: May 15, 2023

Former Military Nike Missile Sites: FORMER NIKE

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

Government Publication Date: Dec 2, 1984

PHMSA Pipeline Safety Flagged Incidents: PIPELINE INCIDENT

This list of flagged pipeline incidents is made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types. Accidents reported on hazardous liquid gravity lines (§195.13) and reporting-regulated-only hazardous liquid gathering lines (§195.15) and incidents reported on Type R gas gathering (§192.8(c)) are not included in the flagged incident file data.

Government Publication Date: Jul 10, 2025

Material Licensing Tracking System (MLTS): MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: May 11, 2021

Historic Material Licensing Tracking System (MLTS) sites: HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File: MINES

The Master Index File (MIF) is provided by the United States Department of Labor, Mine Safety and Health Administration (MSHA). This file, which was originally created in the 1970's, contained many Mine-IDs that were invalid. MSHA removes invalid IDs from the MIF upon discovery. MSHA applicable data includes the following: all Coal and Metal/Non-Metal mines under MSHA's jurisdiction since 1/1/1970; mine addresses for all mines in the database except for Abandoned mines prior to 1998 from MSHA's legacy system (addresses may or may not correspond with the physical location of the mine itself); violations that have been assessed penalties as a result of MSHA inspections beginning on 1/1/2000; and violations issued as a result of MSHA inspections conducted beginning on 1/1/2000.

Government Publication Date: Aug 8, 2025

Surface Mining Control and Reclamation Act Sites: SMCRA

This inventory of land and water impacted by past mining (primarily legacy coal mining operations) is maintained by the U.S. Department of the Interior's Office of Surface Mining Reclamation and Enforcement (OSMRE), as it provides information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). This inventory contains information on the type and extent of Abandoned Mine Land (AML) Problems, as well as information on the cost associated with the reclamation of those problems. The data is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed. Disclaimer: Per the OSMRE, States and tribes who enter their data into e-AMLIS (AML Inventory System) may truncate their latitude and longitude so the precise location of usually dangerous AMLs is not revealed in an effort to protect the public from searching for these AMLs, most of which are on private property. If more precise location information is needed, please contact the applicable state/tribe of interest.

Government Publication Date: Oct 30, 2025

Mineral Resource Data System: MRDS

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

Government Publication Date: Mar 15, 2016

DOE Legacy Management Sites: LM SITES

The U.S. Department of Energy (DOE) Office of Legacy Management (LM) currently manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The LM manages sites with diverse regulatory drivers (statutes or programs that direct cleanup and management requirements at DOE sites) or as part of internal DOE or congressionally-recognized programs, such as but not limited to: Formerly Utilized Sites Remedial Action Program (FUSRAP), Uranium Mill Tailings Radiation Control Act (UMTRCA Title I, Tile II), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Resource Conservation and Recovery Act (RCRA), Decontamination and Decommissioning (D&D), Nuclear Waste Policy Act (NWPA). The intent of the site location is to provide a general reference point to the site on a national scale. The coordinates of each site point can be the location of a site monument, the centroid of the site boundary, or a general location of the site. This site listing includes data exported from the DOE Office of LM's Geospatial Environmental Mapping System (GEMS). GEMS Data disclaimer: The DOE Office of LM makes no representation or warranty, expressed or implied, regarding the use, accuracy, availability, or completeness of the data presented herein.

Government Publication Date: Nov 6, 2025

Alternative Fueling Stations: ALT FUELS

This list of alternative fueling stations is sourced from the U.S. Department of Energy's (DOE) Alternative Fuels Data Center (AFDC) and National Renewable Energy Laboratory (NREL). The DOE's Office of Energy Efficiency & Renewable Energy launched the AFDC in 1991 as a repository for alternative fuel vehicle performance data, which provides a wealth of information and data on alternative and renewable fuels, advanced vehicles, fuel-saving strategies, and emerging transportation technologies. The data includes Biodiesel (B20 and above), Compressed Natural Gas (CNG), Electric, Ethanol (E85), Hydrogen, Liquefied Natural Gas (LNG), Propane (LPG), and Renewable Diesel (R20 and above) fuel type locations.

Government Publication Date: Mar 11, 2026

Superfunds Consent Decrees: CONSENT DECREES

This list of Superfund consent decrees is provided by the Department of Justice, Environment & Natural Resources Division (ENRD) through a Freedom of Information Act (FOIA) applicable file. This listing includes Cases filed since 2010 limited to the following: Consent Decrees for CERCLA or Superfund Sites filed and/or as proposed within the ENRD's Case Management System (CMS); and applicable ENRD's Environmental Defense Section (EDS) CERCLA Cases with "Consent" in History Note. CMS may not reflect the latest developments in a case, nor can the agency guarantee the accuracy of the data. ENRD Disclaimer: Congress excluded three discrete categories of law enforcement and national security records from the requirements of the FOIA; response is limited to those records that are subject to the requirements of the FOIA; however, this should not be taken as an indication that excluded records do, or do not, exist.

Government Publication Date: Dec 30, 2025

Air Facility System: AFS

This EPA retired Air Facility System (AFS) dataset contains emissions, compliance, and enforcement data on stationary sources of air pollution. Regulated sources cover a wide spectrum; from large industrial facilities to relatively small operations such as dry cleaners. AFS does not contain data on facilities that are solely asbestos demolition and/or renovation contractors, or landfills. ECHO Clean Air Act data from AFS are frozen and reflect data as of October 17, 2014; the EPA retired this system for Clean Air Act stationary sources and transitioned to ICIS-Air.

Government Publication Date: Oct 17, 2014

Registered Pesticide Establishments: SSTS

This national list of active EPA-registered foreign and domestic pesticide and/or device-producing establishments is based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that each producing establishment must place its EPA establishment number on the label or immediate container of each pesticide, active ingredient or device produced. An EPA establishment number on a pesticide product label identifies the EPA registered location where the product was produced. The list of establishments is made available by the U.S. Environmental Protection Agency (EPA).

Government Publication Date: Sep 26, 2025

Polychlorinated Biphenyl (PCB) Transformers: PCBT

Locations of Transformers Containing Polychlorinated Biphenyls (PCBs) registered with the United States Environmental Protection Agency. PCB transformer owners must register their transformer(s) with EPA. Although not required, PCB transformer owners who have removed and properly disposed of a registered PCB transformer may notify EPA to have their PCB transformer de-registered. Data made available by EPA.

Government Publication Date: Oct 15, 2019

Polychlorinated Biphenyl (PCB) Notifiers: PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Aug 12, 2025

Power Plants: POWER PLANTS

This list of power plants is provided by the U.S. Energy Information Administration (EIA). The listing includes operable electric generating plants in the United States by energy source, originating from the EIA-860, Annual Electric Generator Report; EIA-860M, Monthly Update to the Annual Electric Generator Report; and EIA-923, Power Plant Operations Report. It includes all operable plants by energy source with a combined nameplate capacity of 1 megawatt or more that are operating, are on standby, or out of service for short- or long-term.

Government Publication Date: Jun 5, 2025

Historical Business Activity Risk: HIST RISK

Proprietary list of sites identified as potentially having engaged in business activity that poses a higher-than-normal risk of contamination. Records originate from historical city directories, and are included in this list based on broad business categories Potentially Hazardous Chemical Users and Fuel and Automotive, including but not limited to Dry Cleaners and Fuel Stations, Garages, etc. Inclusion in this listing does not indicate that there is or ever has been contamination; rather, sites are included in this list due to their potential for having engaged in a business activity presenting an elevated risk of contamination. The list was compiled from various city directories including Polks, Millers, Mullin Kille, Interstate Directory, and State Directory Co; spanning roughly 1920s through 1960 depending on information available by city.

Government Publication Date: Jan 1, 1960

NPDES Biosolids Program Permit Holders: NPDES BIOSOLIDS

This Water National Pollutant Discharge Elimination System (NPDES) Biosolids Permits list is sourced from the U.S. Environmental Protection Agency's (EPA) Enforcement and Compliance History Online data. EPA's Integrated Compliance Information System (ICIS) for NPDES includes facility and compliance information for NPDES permits in the ECHO Biosolids facility universe. Per the EPA, when sewage from households and businesses (and sometimes wastewater from industrial dischargers) is sent to a wastewater treatment plant, the liquids are separated from the solids, producing a semi-solid, nutrient-rich product known as "sewage sludge" or "biosolids". The EPA typically uses the term "biosolids" to mean sewage sludge that has been treated to meet the agency's regulatory requirements and is intended to be land applied as a soil conditioner or fertilizer.

Government Publication Date: Feb 7, 2026

State

Spills reported to the Pollution Control Agency: SPILLS

This listing of reported spills is maintained by the Minnesota Pollution Control Agency (MPCA). The Minn. Stat. §115.061, which has been in effect since 1969, describes the duty of people to notify the MPCA when spills occur.

Government Publication Date: Feb 23, 2026

Department of Agriculture Spills: AG SPILLS

The Minnesota Department of Agriculture Incident Response Unit is the regulatory authority of Agricultural Chemical (Ag-Chem) Incidents in Minnesota. This list contains pesticide and fertilizer incidents reported to the Response Unit. This data made available by The Minnesota Department of Agriculture, Incident Response Unit.

Government Publication Date: Nov 27, 2025

Historic spills reported to the Pollution Control Agency: HIST SPL

The Minn. Stat. §115.061, which has been in effect since 1969, describes the duty of people to notify the Minnesota Pollution Control Agency (MPCA) when spills occur. This is the list of spills reported to MPCA, and maintained by The Minnesota Pollution Control Agency (MPCA). This list was maintained till 1 Nov 2016.

Government Publication Date: Nov 1, 2016

Registered Dry Cleaning Facilities: DRYCLEANERS

The Minnesota Pollution Control Agency (MPCA) maintains this listing of registered dry cleaning facilities.

Government Publication Date: Sep 11, 2024

Delisted Drycleaners: DELISTED DRYCLEANERS

List of sites that once appeared on - and have since been removed from - the list of registered dry cleaning facilities made available by the Minnesota Pollution Control Agency (MPCA).

Government Publication Date: Sep 11, 2024

PFAS in Groundwater Samples: PFAS GW

A list of sites from the Minnesota Groundwater Contamination Atlas where Per- and Polyfluoroalkyl Substances (PFAS) were found in groundwater samples. This list is made available by the Minnesota Pollution Control Agency.

Government Publication Date: Nov 12, 2021

PFAS in Landfills: PFAS LANDFILL

A list of sites in the Closed Landfill Program where Per- or polyfluorinated alkyl substances (PFAS) have been detected. This list is made available by the Minnesota Pollution Control Agency (MPCA).

Government Publication Date: Jan 3, 2024

Clandestine Drug Labs: CDL

The Methamphetamine Laboratory Program at the Minnesota Department of Health (MDH) works to protect human health by providing technical advice on the remediation of clandestine methamphetamine production laboratories (meth labs) and decontamination of property exposed to meth lab activities.

Government Publication Date: Aug 23, 2021

Animal Feedlots: FEEDLOTS

The Minnesota Pollution Control Agency (MPCA) tracks locations of animal feedlot facilities. The locations of animal feedlots provide information and context to support decisions on animal health, land use, and maintaining environmental quality.

Government Publication Date: Aug 27, 2025

Tier 2 Report: TIER 2

A list of Tier 2 Facilities in Minnesota. This list is provided by Minnesota Department of Public Safety overseen by the Division of Homeland Security and Emergency Management.

Government Publication Date: Sep 14, 2022

Bulk Storage Permits: BULK STORAGE

The Minnesota Department of Agriculture's Licensing Information System (LIS) lists individuals or companies who hold licenses, certificates and/or permits required by state law and regulated by the Department. This database only contains those LIS licenses related to anhydrous ammonia storage facilities and bulk pesticide/ fertilizer storage facilities.

Government Publication Date: Nov 6, 2025

Tribal

No Tribal additional environmental record sources available for this State.

County

No County additional environmental record sources available for this State.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Property History:

The former Duluth Air Force Base was established in the early 1950's during the Korean War era. The site closed in 1982. Some of the major functions of the base included the operation and maintenance of Bomarc anti-aircraft missiles, Goose Decoy missiles, fighter aircraft, interceptors, and SAFE radar/communications. The base served to support the Duluth Missile Site near the French River, Minnesota, and the Finland Air Force Radar Station in Finland, Minnesota. The property was conveyed to the City, the Airport Authority, and to the National Guard. It is being used as an airport, for commercial and industrial purposes, and for National Guard training. Tanks, petroleum and building demolition are the subjects of the FUDS Program involvement.

Feature Description:

The former Duluth Air Force Base was established in the early 1950's during the Korean War era. The site closed in 1982. Some of the major functions of the base included the operation and maintenance of Bomarc anti-aircraft missiles, Goose Decoy missiles, fighter aircraft, interceptors, and SAFE radar/communications. The base served to support the Duluth Missile Site near the French River, Minnesota, and the Finland Air Force Radar Station in Finland, Minnesota. The property was conveyed to the City, the Airport Authority, and to the National Guard. It is being used as an airport, for commercial and industrial purposes, and for National Guard training. Tanks, petroleum and building demolition are the subjects of the FUDS Program involvement.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

National Priority List: NPL

The U.S. Environmental Protection Agency (EPA)'s National Priorities List (NPL) includes the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program, based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. This data includes NPL sites represented as polygons, where available, that can be sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS), and is limited to those sites where the NPL Status reflects the site is 'Currently on the Final NPL (F)' and/or the 'Site is Part of NPL Site (A)'. These site boundaries represent the footprint of a whole site, the sum of all the Operable Units (OUs) and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. As site investigation and remediation progress, OUs may be added, modified or refined. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Jan 18, 2026

National Priority List - Proposed: PROPOSED NPL

Sites proposed by the U.S. Environmental Protection Agency (EPA), the state agency, or concerned citizens for addition to the National Priorities List (NPL) due to contamination by hazardous waste and identified by the EPA as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites represented as polygons, where available, can be sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS). These site boundaries represent the footprint of a whole site, the sum of all the Operable Units (OUs) and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Jan 18, 2026

Deleted NPL: DELETED NPL

Sites deleted from the U.S. Environmental Protection Agency (EPA)'s National Priorities List (NPL). The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites represented as polygons, where available, can be sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS). These site boundaries represent the footprint of a whole site, the sum of all the Operable Units (OUs) and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Jan 18, 2026

SEMS List 8R Active Site Inventory: SEMS

The U.S. Environmental Protection Agency's (EPA) Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. This data includes SEMS sites from the List 8R Active file as well as applicable sites from the EPA's Facility Registry Service map tool. This data may also include applicable sites represented as polygons sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS), and is limited to those sites where the NPL Status reflects the site is 'Not on the NPL (N)' , 'Removed from Proposed (R)', and/or 'Pre-Proposal Site (S)'. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Dec 26, 2025

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

SEMS List 8R Archive Sites: SEMS ARCHIVE

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. This data includes sites from the List 8R Archived site file. This data may also include applicable sites represented as polygons sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS), and is limited to those sites where the NPL Status reflects the site is 'Not on the NPL (N)' , 'Removed from Proposed (R)', and/or 'Pre-Proposal Site (S)'. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Dec 26, 2025

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA). This database was provided by the United States Environmental Protection Agency (EPA). Refer to SEMS LIEN as the current data source for Superfund Liens.

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action: RCRA CORRACTS

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Nov 30, 2025

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites that have indicated engagement in the treatment, storage, or disposal of hazardous waste which requires a RCRA hazardous waste permit.

Government Publication Date: Nov 30, 2025

RCRA Generator List: RCRA LQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste. This list also includes RCRAInfo sites that have notified as LQGs that do not have a registered Site Manager or Certifier in RCRAInfo.

Government Publication Date: Nov 30, 2025

RCRA Small Quantity Generators List: RCRA SQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month. This list also includes RCRAInfo sites that have notified as SQGs that do not have a registered Site Manager or Certifier in RCRAInfo.

Government Publication Date: Nov 30, 2025

RCRA Very Small Quantity Generators List: RCRA VSQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Nov 30, 2025

RCRA Non-Generators: RCRA NON GEN

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Nov 30, 2025

RCRA Sites with Controls: RCRA CONTROLS

List of Resource Conservation and Recovery Act (RCRA) facilities with institutional controls in place. RCRA gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

Government Publication Date: Nov 30, 2025

Federal Engineering Controls-ECs: FED ENG

List of Engineering controls (ECs) made available by the United States Environmental Protection Agency (EPA). ECs encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. The EC listing includes remedy component data from Superfund decision documents for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Jan 30, 2026

Federal Institutional Controls- ICs: FED INST

List of Institutional controls (ICs) made available by the United States Environmental Protection Agency (EPA). ICs are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site. The IC listing includes remedy component data from Superfund decision documents for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Jan 30, 2026

Land Use Controls Information System: LUCIS

The Land Use Controls Information System (LUCIS) database is sourced from the U.S. Department of the Navy (DON). This data contains information for former Base Realignment and Closure (BRAC) properties across the United States. DON's BRAC office was tasked with tracking certain base closures while requiring the prevention of risks to human health and the environment of those properties with LUCs in place. Regarding currently available LUC Sites data, the sites listing is limited to centroid point locations for the overall installation property boundaries. Formerly obtained LUC Sites data may reflect site details that applied previously for a BRAC property.

Government Publication Date: Jun 13, 2024

Institutional Control Boundaries at NPL sites: NPL IC

These boundaries of Institutional Control areas at sites on the U.S. Environmental Protection Agency's (EPA) National Priorities List (NPL), or as Proposed or Deleted, are sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS). The EPA's NPL includes the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. Institutional controls are non-engineered instruments such as administrative and legal controls that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes.

Government Publication Date: Jan 18, 2026

Emergency Response Notification System: ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

Government Publication Date: Feb 8, 2026

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This data is provided by the United States Environmental Protection Agency (EPA) and includes Brownfield sites from the Cleanups in My Community (CIMC) web application.

Government Publication Date: Sep 8, 2025

FEMA Underground Storage Tank Listing: FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Facility Response Plan: FRP

This listing contains facilities that have submitted Facility Response Plans (FRPs) to the U.S. Environmental Protection Agency (EPA). Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit FRPs. Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments. The list includes FRP facilities sourced from the EPA FOIA office and from previously available Homeland Infrastructure Foundation-Level Data (HIFLD) file/s. Disclaimer: Per the EPA FOIA Office, the verification process for current requested FRP data is undergoing review and revision, and any similar reporting will be made public in Fiscal Year 2026. For this reason, the latest available FOIA file may be incomplete.

Government Publication Date: Jun 1, 2025

Delisted Facility Response Plans: DELISTED FRP

Facilities that once appeared in - and have since been removed from - the list of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Jun 1, 2025

Historical Gas Stations: HIST GAS STATIONS

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

Government Publication Date: Jul 1, 1930

Petroleum Refineries: REFN

This list of petroleum refineries is sourced from the U.S. Energy Information Administration (EIA), Refinery Capacity Report. The listing includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year. The geographic area the report covers is the 50 States, the District of Columbia, Puerto Rico, the U.S. Virgin Islands, Guam, and other U.S. possessions. Per the EIA, the facility location data represents the approximate location based on research of publicly available information from sources such as Federal agencies, company websites, and satellite images on public websites.

Government Publication Date: Oct 31, 2024

Petroleum Product and Crude Oil Rail Terminals: BULK TERMINAL

A list of petroleum product and crude oil rail terminals from the U.S. Energy Information Administration (EIA), as well as petroleum terminals sourced from Oak Ridge National Laboratory hosted by the Homeland Infrastructure Foundation-Level Database. Data includes operable bulk petroleum product terminals with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil with activity between 2017 and 2018. EIA petroleum product terminal data comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings.

Government Publication Date: Jun 5, 2025

LIEN on Property: SEMS LIEN

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) provides Lien details on applicable properties, such as the Superfund lien on property activity, the lien property information, and the parties associated with the lien.

Government Publication Date: Dec 26, 2025

Superfund Decision Documents: SUPERFUND ROD

This database contains a list of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include completed Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD) for active and archived sites stored in the Superfund Enterprise Management System (SEMS), along with other associated memos and files. This information is maintained and made available by the U.S. Environmental Protection Agency.

Government Publication Date: Jan 30, 2026

State

Minnesota Permanent List of Priorities: PLP

The state Superfund sites in Minnesota are listed on the Minnesota Permanent List of Priorities (PLP). The hazardous waste sites on the PLP are in various stages of remediation. At these sites investigation and cleanup are needed, cleanup is underway, or cleanup has been completed and long-term monitoring or maintenance continues. This data is made available by the Minnesota Pollution Control Agency (MPCA). This database serves a purpose similar to that of the federal NPL, functioning as a state-level counterpart for prioritizing cleanup efforts at hazardous substance release sites.

Government Publication Date: Feb 26, 2026

Delisted Permanent List of Priorities (PLP): DEL PLP

This list contains sites that were previously included - and have since been removed from - the Permanent List of Priorities (PLP) maintained by Minnesota's Pollution Control Agency (MPCA) but have now been delisted.

Government Publication Date: Feb 26, 2026

Minnesota Site Remediation Section Database: SHWS

The Site Remediation Section identifies, investigates, and determines appropriate cleanup plans for abandoned or uncontrolled hazardous waste sites where a release or potential release of a hazardous substance poses a risk to human health or the environment. This data is made available by the Minnesota Pollution Control Agency (MPCA)'s Site Remediation Section. This database serves a purpose similar to that of the federal Superfund Enterprise Management System (SEMS), functioning as a state-level counterpart for tracking potential hazardous substance release sites.

Government Publication Date: Feb 26, 2026

MPCA Site Assessment and Emergency Response Sites: SITE ASSESSMENT

List of active and closed sites that are currently under site assessment by Minnesota Pollution Control Agency (MPCA) and are a part of MPCA Remediation Sites list, and Emergency Management Sites where a chemical spill or some other environmental incident occurred that required immediate action to protect human health and the environment (includes only Emergency Management Sites that require significant staff involvement).

Government Publication Date: Feb 26, 2026

Permitted Solid Waste Facilities: SWF/LF

A list of permitted solid waste and landfill facilities made available by the Minnesota Pollution Control Agency (MPCA).

Government Publication Date: Mar 3, 2026

Closed Landfills Priority List: LCP

The Minnesota Legislature enacted the Landfill Cleanup Act (LCA) in 1994 to ensure the proper closure and post-closure care at up to 112 closed, permitted municipal sanitary landfills located throughout the state. Based on this legislation, the Minnesota Pollution Control Agency (MPCA) created the Closed Landfill Program (CLP) to administer the LCA mandates. This data made available by The Minnesota Pollution Control Agency (MPCA).

Government Publication Date: Jan 16, 2025

Unpermitted Dump Sites: UNPERMITTED LF

The Minnesota Pollution Control Agency (MPCA) defines "dumps" as those landfills that never held a valid permit from the MPCA. Generally, dumps existed prior to the permitting program established with the creation of the MPCA in 1967. This database is made available by MPCA.

Government Publication Date: Feb 26, 2026

Recycling Markets Directory: RECYCLING

The Recycling Markets Directory is provided by the Minnesota Pollution Control Agency (MPCA). The markets in this database accept large (commercial) quantities of materials.

Government Publication Date: Mar 4, 2026

Historical Leaking Underground Storage Tanks: HIST LUST

A list of leaking underground storage tanks (LUSTs) in the tanks database maintained by the Minnesota Pollution Control Agency (MPCA) up until Nov 01, 2016.

Government Publication Date: Nov 1, 2016

Deleted Leaking Underground Storage Tanks: DEL LUST

A list of leaking underground storage tanks that are often deleted for various reasons. Deletion occurs primarily due to a duplication, or that the source was determined to not be from a tank. This list was provided by Minnesota Pollution Control Agency.

Government Publication Date: Jan 5, 2016

Historical Leaking Aboveground Storage Tanks: HIST LAST

A list of leaking aboveground storage tanks (LASTs) in the tanks database maintained by the Minnesota Pollution Control Agency (MPCA) up until Nov 01, 2016.

Government Publication Date: Nov 1, 2016

Historical Leak Sites: HIST LEAKSITES

A list of leak sites that were neither determined as aboveground nor underground in the tanks database maintained by the Minnesota Pollution Control Agency (MPCA) up until Nov 01, 2016.

Government Publication Date: Nov 1, 2016

MPCA Remediation Leak Sites: LST REM SITE

This is list of leak sites in which the Minnesota Pollution Control Agency (MPCA) is involved in remediation activities. The MPCA publishes this listing.

Government Publication Date: Feb 26, 2026

MPCA Tank Incidents: LST INCIDENT

A list of leaking and registered tank sites in Minnesota that includes locations, details of tank installation and construction, and installed safety measures. This list is provided by Minnesota Pollution Control Agency (MPCA).

Government Publication Date: Feb 23, 2026

Delisted Leaking Storage Tanks: DELISTED LST

This database contains a list of closed leaking storage tank sites that were removed from the Minnesota Pollution Control Agency (MPCA).

Government Publication Date: Feb 26, 2026

Underground Storage Tanks: UST

In Minnesota, there are about 18,000 regulated underground storage tanks (USTs) currently in use. The Underground Storage Tank Program in the Minnesota Pollution Control Agency (MPCA) was created to help prevent contamination caused by leaking tanks. This is a list that contains all regulated USTs. Some types of USTs are exempt from state regulations, such as: tanks with capacity of 110 gallons or less; farm and residential tanks with a 1,100-gallon capacity or less, storing motor fuel for non-commercial purposes, or heating oil for on-site consumption; tanks that contain a minimum concentration of regulated substances; flow-through process tanks; oil-water separators. This data is made available by MPCA.

Government Publication Date: Feb 25, 2026

Minnesota Above Ground Storage Tanks: AST

There are more than 20,000 regulated above-ground storage tanks (ASTs) currently in use across Minnesota. Most tanks located above ground containing liquid substances (i.e., not gaseous or solid at ambient temperature and pressure) are subject to the Minnesota Pollution Control Agency's (MPCA) rules for design and operation of ASTs. This list contains ASTs regulated by MPCA. Some types of ASTs are exempt from the regulations, such as but not limited to the following: ASTs with a capacity of 500 gallons or less; Farm ASTs; Residential ASTs storing 1,100 gallons or less of motor fuel used for noncommercial purposes; ASTs containing hazardous wastes subject to a treatment or storage permit or containing agricultural chemicals regulated under MN Statutes 18B, 18C, 18D; Stormwater collection systems and septic systems. This data is made available by the MPCA.

Government Publication Date: Feb 23, 2026

Tank Sites: HIST TANK

A list of tank sites not included in AST or UST, this list maintained by the Minnesota Pollution Control Agency (MPCA) up until Dec 30, 2016.

Government Publication Date: Dec 30, 2016

Delisted Storage Tanks: DELISTED TANK

This database contains a list of storage tank sites that were removed from the Minnesota Pollution Control Agency (MPCA).

Government Publication Date: Feb 26, 2026

Sites with Institutional Control Events: INST

A list made available by the Minnesota Pollution Control Agency (MPCA) consisting of remediation sites that have various institutional controls in place.

Government Publication Date: Feb 27, 2026

Agricultural Contingency Sites Boundaries: AG CONTINGENCY

The Minnesota Department of Agriculture (MDA) Incident Response Unit (IRU) is the state lead agency for the investigation and remediation of incidents involving agricultural chemicals (pesticides and fertilizer). This MDA IRU database includes sites with a soil or ground water contingency, deed restriction, local ordinance, restrictive covenant or deed affidavit in place. The accuracy of the boundaries of these sites can be variable - in most cases, the site boundaries should be considered as only representing the vicinity of the soil or ground water contingency area or plume.

Government Publication Date: Nov 27, 2025

Petroleum Brownfields Program Sites: BROWNFIELDS

The Minnesota Pollution Control Agency (MPCA)'s Petroleum Brownfields Program handles petroleum contamination under the Petroleum Tank Release Cleanup Act (Minnesota Statutes § 115C). This data is made available by MPCA.

Government Publication Date: Feb 26, 2026

Voluntary Investigation and Cleanup Program List: VIC

The Minnesota Pollution Control Agency's (MPCA) Brownfield Program consists of an integrated program called the Voluntary Investigation and Cleanup (VIC) Program. This program handles hazardous substance contamination under Minnesota's Environmental Response and Liability Act (Minnesota Statutes § 115B). This database is made available by MPCA.

Government Publication Date: Feb 26, 2026

Potential Voluntary Investigation and Cleanup Program Sites: POTENTIAL VIC

This listing of Potential Voluntary Investigation and Cleanup Program sites is provided by the Minnesota Pollution Control Agency (MPCA). These potential sites have not yet entered into the VIC Program until an application has been received at the MPCA.

Government Publication Date: Apr 22, 2016

MPCA Agency Interests: MPCA AI

Facility, site and project locations from the Minnesota Pollution Control Agency's enterprise database, representing locations associated with waste water, storm water, hazardous waste, feedlot, solid waste, tanks, remediation, and other agency programs. Includes records from "What's In My Neighborhood Sites".

Government Publication Date: Jan 27, 2026

Tribal

Leaking Underground Storage Tanks on Tribal/Indian Lands: INDIAN LUST

This list of leaking underground storage tanks (LUSTs) on Tribal/Indian Lands in Region 5, which includes Minnesota, is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Nov 21, 2025

Underground Storage Tanks on Tribal/Indian Lands: INDIAN UST

This list of underground storage tanks (USTs) on Tribal/Indian Lands in Region 5, which includes Minnesota, is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Nov 21, 2025

Delisted Tribal Leaking Storage Tanks: DELISTED INDIAN LST

Leaking Underground Storage Tank (LUST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian LUST lists made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Nov 21, 2025

Delisted Tribal Underground Storage Tanks: DELISTED INDIAN UST

Underground Storage Tank (UST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian UST lists made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Nov 21, 2025

County

No County standard environmental record sources available for this State.

Additional Environmental Record Sources

Federal

PFAS Greenhouse Gas Emissions Data: PFAS GHG

The U.S. Environmental Protection Agency's (EPA) Greenhouse Gas Reporting Program (GHGRP) collects Greenhouse Gas (GHG) data from large emitting facilities (25,000 metric tons of carbon dioxide equivalent (CO2e) per year), and suppliers of fossil fuels and industrial gases that results in GHG emissions when used. This dataset is sourced from the EPA's PFAS Analytic Tools, and it includes GHG emissions data for facilities that emit or have emitted since 2010 chemicals identified as PFAS based on EPA's CompTox Chemicals Dashboard lists of PFAS with defined and undefined structures. PFAS emissions data has been identified for facilities engaged in the following industrial processes: Aluminum Production (GHGRP Subpart F), HCFC-22 Production and HFC-23 Destruction (Subpart O), Electronics Manufacturing (Subpart I), Fluorinated Gas Production (Subpart L), Magnesium Production (Subpart T), Electrical Transmission and Distribution Equipment Use (Subpart DD), and Manufacture of Electric Transmission and Distribution Equipment (Subpart SS). Over time, other industrial processes with required GHGRP reporting may include PFAS emissions data and the list of reportable gases may change over time. Note that some regulatory programs have specified chemical structure requirements that define PFAS differently than the lists in EPA's CompTox Chemicals Dashboard.

Government Publication Date: Mar 2, 2026

On-Scene Coordinator Response Sites: OSC RESPONSE

This list of On-Scene Coordinator (OSC) Response Sites is provided by the U.S. Environmental Protection Agency (EPA). OSCs are the federal officials responsible for monitoring or directing responses to all oil spills and hazardous substance releases reported to the federal government. OSCs coordinate all federal efforts with, and provide support and information to local, state, and regional response communities. An OSC is an agent of either EPA or the U.S. Coast Guard (USCG), depending on where the incident occurs. EPA's OSCs have primary responsibility for spills and releases to inland areas and waters. USCG OSCs have responsibility for coastal waters and the Great Lakes. In general, an OSC has the following key responsibilities during and after a response: Assessment, Monitoring, Response Assistance, and Evaluation.

Government Publication Date: Oct 8, 2025

Facility Registry Service/Facility Index: FINDS/FRS

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the U.S. Environmental Protection Agency (EPA).

Government Publication Date: Jan 1, 2026

Toxics Release Inventory (TRI) Program: TRIS

The U.S. Environmental Protection Agency's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of toxic chemicals from U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. There are currently 770 individually listed chemicals and 33 chemical categories covered by the TRI Program. Facilities that manufacture, process or otherwise use these chemicals in amounts above established levels must submit annual reporting forms for each chemical. Note that the TRI chemical list does not include all toxic chemicals used in the U.S. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment. This database includes TRI Reporting Data for calendar years 1987 through 2021 and Preliminary Data for 2022.

Government Publication Date: Sep 20, 2023

PFOA/PFOS Contaminated Sites: PFAS NPL

This list of Superfund Sites with Per- and Polyfluoroalkyl Substances (PFAS) detections is made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data, previously the list was obtained by EPA FOIA requests. EPA's Office of Land and Emergency Management and EPA Regional Offices maintain what is known about site investigations, contamination, and remedial actions under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) where PFAS is present in the environment. Limitations: Detections of PFAS at National Priorities List (NPL) sites do not mean that people are at risk from PFAS, are exposed to PFAS, or that the site is the source of the PFAS. The information in the Superfund NPL and Superfund Alternative Agreement (SAA) PFAS detection site list is years old and may not be accurate today. Site information such as site name, site ID, and location has been confirmed for accuracy; however, PFAS-related information such as media sampled, drinking water being above the health advisory, or mitigation efforts has not been verified. For Federal Facilities data, the other Federal agencies (OFA) are the lead agency for their data and provided them to EPA.

Government Publication Date: Dec 29, 2025

Federal Agency Locations with Known or Suspected PFAS Detections: PFAS FED SITES

This list of federal agency locations with known or suspected detections of Per- and Polyfluoroalkyl Substances (PFAS) is made available by the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools data. The EPA outlines that these data are gathered from several federal entities, such as the federal Superfund program, Department of Defense (DOD), National Aeronautics and Space Administration (NASA), Department of Transportation (DOT), and Department of Energy (DOE). The dates this data was extracted for the PFAS Analytic Tools range from 2022 to 2025 per agency entity dataset. Sites on this list do not necessarily reflect the source/s of PFAS contamination and detections do not indicate level of risk or human exposure at the site. Agricultural notifications in this data are limited to DOD sites only. At this time, the EPA is aware that this list is not comprehensive of all Federal agencies.

Government Publication Date: May 30, 2025

SSEHRI PFAS Contamination Sites: PFAS SSEHRI

This PFAS Contamination Site Tracker database is compiled by the PFAS Project Lab, part of the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents. Locations for the Known PFAS Contamination Sites are sourced from the PFAS Sites and Community Resources Map by the PFAS-REACH team, credited to PFAS Project Lab, Silent Spring Institute, and PFAS Exchange. Disclaimer: The source conveys the data undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Access the following source link for the most current information: https://pfasproject.com/pfas-sites-and-community-resources/

Government Publication Date: Aug 1, 2025

National Response Center PFAS Spills: PFAS ERNS

This Per- and Poly-Fluoroalkyl Substances (PFAS) Spills dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The National Response Center (NRC), operated by the U.S. Coast Guard, is the designated federal point of contact for reporting all oil, chemical, and other discharges into the environment, for the United States and its territories. This dataset contains NRC spill information from 1990 to the present that is restricted to records associated with PFAS and PFAS-containing materials. Incidents are filtered to include only records with a "Material Involved" or "Incident Description" related to Aqueous Film Forming Foam (AFFF). The keywords used to filter the data included "AFFF," "Fire Fighting Foam," "Aqueous Film Forming Foam," "Fire Suppressant Foam, "PFAS," "PERFL," "PFOA," "PFOS," and "Genx." Limitations: The data from the NRC website contains initial incident data that has not been validated or investigated by a federal/state response agency. Keyword searches may misidentify some incident reports that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS spills/release incidents.

Government Publication Date: Feb 16, 2026

PFAS NPDES Discharge Monitoring: PFAS NPDES

This list of National Pollutant Discharge Elimination System (NPDES) permitted facilities with required monitoring for Per- and Polyfluoroalkyl (PFAS) Substances is made available via the U.S. Environmental Protection Agency (EPA)'s PFAS Analytic Tools. Any point-source wastewater discharger to waters of the United States must have a NPDES permit, which defines a set of parameters for pollutants and monitoring to ensure that the discharge does not degrade water quality or impair human health. This list includes NPDES permitted facilities associated with permits that monitor for Per- and Polyfluoroalkyl Substances (PFAS), limited to the years 2007 - present. EPA further advises the following regarding these data: currently, fewer than half of states have required PFAS monitoring for at least one of their permittees, and fewer states have established PFAS effluent limits for permittees. For states that may have required monitoring, some reporting and data transfer issues may exist on a state-by-state basis.

Government Publication Date: Dec 16, 2024

Perfluorinated Alkyl Substances (PFAS) from Toxic Release Inventory: PFAS TRI

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a per- or polyfluoroalkyl (PFAS) substance included in the U.S. Environmental Protection Agency's (EPA) consolidated PFAS Master List of PFAS Substances. Encompasses Toxics Release Inventory records included in the EPA PFAS Analytic Tools. The EPA's TRI database currently tracks information on disposal or releases of 770 individually listed toxic chemicals and 33 chemical categories from thousands of U.S. facilities and details about how facilities manage those chemicals through recycling, energy recovery, and treatment. This listing includes TRI Reporting Data for calendar years 1987 through 2021 and Preliminary Data for 2022.

Government Publication Date: Sep 20, 2023

PFAS Water Quality Portal Sampling Data: PFAS WATER

This Per- and Poly-Fluoroalkyl Substances (PFAS) Environmental Media Sampling Data is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The Water Quality Portal (WQP), as a cooperative service sponsored by the United States Geological Survey, the EPA, and the National Water Quality Monitoring Council, is part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations, and individuals submit project details and sampling results to this public repository. Limitations: EPA did not carry out the sampling or testing of a majority of the data in the WQP PFAS dataset. EPA can only speak to the accuracy and completeness of the data from projects like the National Aquatic Resource Surveys for which EPA is the data owner/organization. Data may exist within the file on Quality Assurance Project Plans (QAPPs) and the approving agency of the QAPP, if a QAPP is entered.

Government Publication Date: Feb 2, 2026

PFAS TSCA Manufacture and Import Facilities: PFAS TSCA

The U.S. Environmental Protection Agency (EPA) issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. This list is specific only to TSCA Manufacture and Import Facilities with reported per- and poly-fluoroalkyl (PFAS) substances. Data file is sourced from EPA's PFAS Analytic Tools TSCA dataset which includes CDR/Inventory Update Reporting data from 1998 up to 2020. Disclaimer: This data file includes production and importation data for chemicals identified in EPA's CompTox Chemicals Dashboard list of PFAS without explicit structures and list of PFAS structures in DSSTox. Note that some regulations have specific chemical structure requirements that define PFAS differently than the lists in EPA's CompTox Chemicals Dashboard. Reporting information on manufactured or imported chemical substance amounts should not be compared between facilities, as some companies claim Chemical Data Reporting Rule data fields for PFAS information as Confidential Business Information.

Government Publication Date: Jan 5, 2023

PFAS Waste Transfers from RCRA e-Manifest: PFAS E-MANIFEST

This Per- and Poly-Fluoroalkyl Substances (PFAS) Waste Transfers dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. Every shipment of hazardous waste in the U.S. must be accompanied by a shipment manifest, which is a critical component of the cradle-to-grave tracking of wastes mandated by the Resource Conservation and Recovery Act (RCRA). According to the EPA, currently no Federal Waste Code exists for any PFAS compounds. To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: • PFAS • PFOA • PFOS • PERFL • AFFF • GENX • GEN-X (plus the Vermont state-specific waste codes). Limitations: Amount or concentration of PFAS being transferred cannot be determined from the manifest information. Keyword searches may misidentify some manifest records that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS waste transfers.

Government Publication Date: Feb 14, 2026

PFAS Industry Sectors: PFAS IND

This Per- and Poly-Fluoroalkyl Substances (PFAS) Industry Sectors dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The dataset was developed from various sources that show which industries may be handling PFAS including: EPA's Enforcement and Compliance History Online (ECHO) records restricted to potential PFAS-handling industry sectors, based on the North American Industry Classification System (NAICS) Codes and Standard Industrial Classification (SIC) Codes associated federal regulatory programs (e.g., Clean Water Act, Clean Air Act, and Resource Conservation and Recovery Act) at the facility level; ECHO records for Fire Training Sites identified where fire-fighting foam may have been used in training exercises; and 14 CFR Part 139 Airports compiled from historic and current records from the FAA Airport Data and Information Portal. Since July 2006, all certificated Part 139 Airports are required to have fire-fighting foam onsite that meet certain military specifications, which to date have been fluorinated (Aqueous Film Forming Foam). Limitations: Inclusion in this dataset does not indicate that PFAS are being manufactured, processed, used, or released by the facility. Listed facilities potentially handle PFAS based on their industrial profile but are unconfirmed by the EPA. Keyword searches in ECHO for Fire Training sites may misidentify some facilities and should not be considered to be an exhaustive list of fire training facilities in the U.S.

Government Publication Date: Feb 16, 2026

Hazardous Materials Information Reporting System: HMIRS

The Hazardous Materials Incident Reporting System (HMIRS) database contains unintentional hazardous materials release information reported to the U.S. Department of Transportation, Pipeline and Hazardous Materials Safety Administration.

Government Publication Date: Jan 29, 2026

National Clandestine Drug Labs: NCDL

The U.S. Department of Justice ("the Department"), Drug Enforcement Administration (DEA), provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Nov 30, 2023

Toxic Substances Control Act: TSCA

The U.S. Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule. The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI). EPA CDR collections occur approximately every four years and reporting requirements change per collection.

Government Publication Date: May 12, 2022

Hist TSCA: HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.
Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing: FTTS ADMIN
An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.
Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing: FTTS INSP
An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.
Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List: PRP
Early in the site cleanup process, the U.S. Environmental Protection Agency (EPA) conducts a search to find the Potentially Responsible Parties (PRPs). The EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site. This listing contains PRPs, Noticed Parties, at sites in the EPA's Superfund Enterprise Management System (SEMS).
Government Publication Date: Dec 26, 2025

State Coalition for Remediation of Drycleaners Listing: SCRD DRYCLEANER
The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin. Since 2017, the SCRD no longer maintains this data, refer to applicable state source data where available.
Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS): ICIS
The Integrated Compliance Information System (ICIS) database contains integrated enforcement and compliance information across most of U.S. Environmental Protection Agency's (EPA) programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained by the EPA Headquarters and at the Regional offices. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
Government Publication Date: Oct 18, 2025

Drycleaner Facilities: FED DRYCLEANERS
A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) data as made available by the U.S. Environmental Protection Agency (EPA), sourced from the ECHO Exporter file. This EPA source file tracks facilities that possess NAICS and SIC codes that classify businesses as drycleaner establishments.
Government Publication Date: Jan 24, 2026

Delisted Drycleaner Facilities: DELISTED FED DRY
List of sites which once appeared on - and have since been removed from - the list of drycleaner facilities included in Enforcement and Compliance History Online (ECHO) data as made available by the U.S. Environmental Protection Agency (EPA), sourced from the ECHO Exporter file. This EPA source file tracks facilities that possess NAICS and SIC codes that classify businesses as drycleaner establishments.
Government Publication Date: Jan 24, 2026

Formerly Used Defense Sites: FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DOD) is responsible for an environmental restoration. The FUDS Annual Report to Congress (ARC) is published by the U.S. Army Corps of Engineers (USACE). This data is compiled from the USACE's Geospatial FUDS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) FUDS dataset which applies to the Fiscal Year 2021 FUDS Inventory.

Government Publication Date: May 15, 2023

FUDS Munitions Response Sites: FUDS MRS

Boundaries of Munitions Response Sites (MRS), published with the Formerly Used Defense Sites (FUDS) Annual Report to Congress (ARC) by the U.S. Army Corps of Engineers (USACE). An MRS is a discrete location within a Munitions response area (MRA) that is known to require a munitions response. An MRA means any area on a defense site that is known or suspected to contain unexploded ordnance (UXO), discarded military munitions (DMM), or munitions constituents (MC). This data is compiled from the USACE's Geospatial MRS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) MRS dataset.

Government Publication Date: May 15, 2023

Former Military Nike Missile Sites: FORMER NIKE

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

Government Publication Date: Dec 2, 1984

PHMSA Pipeline Safety Flagged Incidents: PIPELINE INCIDENT

This list of flagged pipeline incidents is made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types. Accidents reported on hazardous liquid gravity lines (§195.13) and reporting-regulated-only hazardous liquid gathering lines (§195.15) and incidents reported on Type R gas gathering (§192.8(c)) are not included in the flagged incident file data.

Government Publication Date: Jul 10, 2025

Material Licensing Tracking System (MLTS): MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: May 11, 2021

Historic Material Licensing Tracking System (MLTS) sites: HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File: MINES

The Master Index File (MIF) is provided by the United States Department of Labor, Mine Safety and Health Administration (MSHA). This file, which was originally created in the 1970's, contained many Mine-IDs that were invalid. MSHA removes invalid IDs from the MIF upon discovery. MSHA applicable data includes the following: all Coal and Metal/Non-Metal mines under MSHA's jurisdiction since 1/1/1970; mine addresses for all mines in the database except for Abandoned mines prior to 1998 from MSHA's legacy system (addresses may or may not correspond with the physical location of the mine itself); violations that have been assessed penalties as a result of MSHA inspections beginning on 1/1/2000; and violations issued as a result of MSHA inspections conducted beginning on 1/1/2000.

Government Publication Date: Aug 8, 2025

Surface Mining Control and Reclamation Act Sites: SMCRA

This inventory of land and water impacted by past mining (primarily legacy coal mining operations) is maintained by the U.S. Department of the Interior's Office of Surface Mining Reclamation and Enforcement (OSMRE), as it provides information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). This inventory contains information on the type and extent of Abandoned Mine Land (AML) Problems, as well as information on the cost associated with the reclamation of those problems. The data is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed. Disclaimer: Per the OSMRE, States and tribes who enter their data into e-AMLIS (AML Inventory System) may truncate their latitude and longitude so the precise location of usually dangerous AMLs is not revealed in an effort to protect the public from searching for these AMLs, most of which are on private property. If more precise location information is needed, please contact the applicable state/tribe of interest.

Government Publication Date: Oct 30, 2025

Mineral Resource Data System: MRDS

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

Government Publication Date: Mar 15, 2016

DOE Legacy Management Sites: LM SITES

The U.S. Department of Energy (DOE) Office of Legacy Management (LM) currently manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The LM manages sites with diverse regulatory drivers (statutes or programs that direct cleanup and management requirements at DOE sites) or as part of internal DOE or congressionally-recognized programs, such as but not limited to: Formerly Utilized Sites Remedial Action Program (FUSRAP), Uranium Mill Tailings Radiation Control Act (UMTRCA Title I, Tile II), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Resource Conservation and Recovery Act (RCRA), Decontamination and Decommissioning (D&D), Nuclear Waste Policy Act (NWPA). The intent of the site location is to provide a general reference point to the site on a national scale. The coordinates of each site point can be the location of a site monument, the centroid of the site boundary, or a general location of the site. This site listing includes data exported from the DOE Office of LM's Geospatial Environmental Mapping System (GEMS). GEMS Data disclaimer: The DOE Office of LM makes no representation or warranty, expressed or implied, regarding the use, accuracy, availability, or completeness of the data presented herein.

Government Publication Date: Nov 6, 2025

Alternative Fueling Stations: ALT FUELS

This list of alternative fueling stations is sourced from the U.S. Department of Energy's (DOE) Alternative Fuels Data Center (AFDC) and National Renewable Energy Laboratory (NREL). The DOE's Office of Energy Efficiency & Renewable Energy launched the AFDC in 1991 as a repository for alternative fuel vehicle performance data, which provides a wealth of information and data on alternative and renewable fuels, advanced vehicles, fuel-saving strategies, and emerging transportation technologies. The data includes Biodiesel (B20 and above), Compressed Natural Gas (CNG), Electric, Ethanol (E85), Hydrogen, Liquefied Natural Gas (LNG), Propane (LPG), and Renewable Diesel (R20 and above) fuel type locations.

Government Publication Date: Mar 11, 2026

Superfunds Consent Decrees: CONSENT DECREES

This list of Superfund consent decrees is provided by the Department of Justice, Environment & Natural Resources Division (ENRD) through a Freedom of Information Act (FOIA) applicable file. This listing includes Cases filed since 2010 limited to the following: Consent Decrees for CERCLA or Superfund Sites filed and/or as proposed within the ENRD's Case Management System (CMS); and applicable ENRD's Environmental Defense Section (EDS) CERCLA Cases with "Consent" in History Note. CMS may not reflect the latest developments in a case, nor can the agency guarantee the accuracy of the data. ENRD Disclaimer: Congress excluded three discrete categories of law enforcement and national security records from the requirements of the FOIA; response is limited to those records that are subject to the requirements of the FOIA; however, this should not be taken as an indication that excluded records do, or do not, exist.

Government Publication Date: Dec 30, 2025

Air Facility System: AFS

This EPA retired Air Facility System (AFS) dataset contains emissions, compliance, and enforcement data on stationary sources of air pollution. Regulated sources cover a wide spectrum; from large industrial facilities to relatively small operations such as dry cleaners. AFS does not contain data on facilities that are solely asbestos demolition and/or renovation contractors, or landfills. ECHO Clean Air Act data from AFS are frozen and reflect data as of October 17, 2014; the EPA retired this system for Clean Air Act stationary sources and transitioned to ICIS-Air.

Government Publication Date: Oct 17, 2014

Registered Pesticide Establishments: SSTS

This national list of active EPA-registered foreign and domestic pesticide and/or device-producing establishments is based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that each producing establishment must place its EPA establishment number on the label or immediate container of each pesticide, active ingredient or device produced. An EPA establishment number on a pesticide product label identifies the EPA registered location where the product was produced. The list of establishments is made available by the U.S. Environmental Protection Agency (EPA).

Government Publication Date: Sep 26, 2025

Polychlorinated Biphenyl (PCB) Transformers: PCBT

Locations of Transformers Containing Polychlorinated Biphenyls (PCBs) registered with the United States Environmental Protection Agency. PCB transformer owners must register their transformer(s) with EPA. Although not required, PCB transformer owners who have removed and properly disposed of a registered PCB transformer may notify EPA to have their PCB transformer de-registered. Data made available by EPA.

Government Publication Date: Oct 15, 2019

Polychlorinated Biphenyl (PCB) Notifiers: PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Aug 12, 2025

Power Plants: POWER PLANTS

This list of power plants is provided by the U.S. Energy Information Administration (EIA). The listing includes operable electric generating plants in the United States by energy source, originating from the EIA-860, Annual Electric Generator Report; EIA-860M, Monthly Update to the Annual Electric Generator Report; and EIA-923, Power Plant Operations Report. It includes all operable plants by energy source with a combined nameplate capacity of 1 megawatt or more that are operating, are on standby, or out of service for short- or long-term.

Government Publication Date: Jun 5, 2025

Historical Business Activity Risk: HIST RISK

Proprietary list of sites identified as potentially having engaged in business activity that poses a higher-than-normal risk of contamination. Records originate from historical city directories, and are included in this list based on broad business categories Potentially Hazardous Chemical Users and Fuel and Automotive, including but not limited to Dry Cleaners and Fuel Stations, Garages, etc. Inclusion in this listing does not indicate that there is or ever has been contamination; rather, sites are included in this list due to their potential for having engaged in a business activity presenting an elevated risk of contamination. The list was compiled from various city directories including Polks, Millers, Mullin Kille, Interstate Directory, and State Directory Co; spanning roughly 1920s through 1960 depending on information available by city.

Government Publication Date: Jan 1, 1960

NPDES Biosolids Program Permit Holders: NPDES BIOSOLIDS

This Water National Pollutant Discharge Elimination System (NPDES) Biosolids Permits list is sourced from the U.S. Environmental Protection Agency's (EPA) Enforcement and Compliance History Online data. EPA's Integrated Compliance Information System (ICIS) for NPDES includes facility and compliance information for NPDES permits in the ECHO Biosolids facility universe. Per the EPA, when sewage from households and businesses (and sometimes wastewater from industrial dischargers) is sent to a wastewater treatment plant, the liquids are separated from the solids, producing a semi-solid, nutrient-rich product known as "sewage sludge" or "biosolids". The EPA typically uses the term "biosolids" to mean sewage sludge that has been treated to meet the agency's regulatory requirements and is intended to be land applied as a soil conditioner or fertilizer.

Government Publication Date: Feb 7, 2026

State

Spills reported to the Pollution Control Agency: SPILLS

This listing of reported spills is maintained by the Minnesota Pollution Control Agency (MPCA). The Minn. Stat. §115.061, which has been in effect since 1969, describes the duty of people to notify the MPCA when spills occur.

Government Publication Date: Feb 23, 2026

Department of Agriculture Spills: AG SPILLS

The Minnesota Department of Agriculture Incident Response Unit is the regulatory authority of Agricultural Chemical (Ag-Chem) Incidents in Minnesota. This list contains pesticide and fertilizer incidents reported to the Response Unit. This data made available by The Minnesota Department of Agriculture, Incident Response Unit.

Government Publication Date: Nov 27, 2025

Historic spills reported to the Pollution Control Agency: HIST SPL

The Minn. Stat. §115.061, which has been in effect since 1969, describes the duty of people to notify the Minnesota Pollution Control Agency (MPCA) when spills occur. This is the list of spills reported to MPCA, and maintained by The Minnesota Pollution Control Agency (MPCA). This list was maintained till 1 Nov 2016.

Government Publication Date: Nov 1, 2016

Registered Dry Cleaning Facilities: DRYCLEANERS

The Minnesota Pollution Control Agency (MPCA) maintains this listing of registered dry cleaning facilities.

Government Publication Date: Sep 11, 2024

Delisted Drycleaners: DELISTED DRYCLEANERS

List of sites that once appeared on - and have since been removed from - the list of registered dry cleaning facilities made available by the Minnesota Pollution Control Agency (MPCA).

Government Publication Date: Sep 11, 2024

PFAS in Groundwater Samples: PFAS GW

A list of sites from the Minnesota Groundwater Contamination Atlas where Per- and Polyfluoroalkyl Substances (PFAS) were found in groundwater samples. This list is made available by the Minnesota Pollution Control Agency.

Government Publication Date: Nov 12, 2021

PFAS in Landfills: PFAS LANDFILL

A list of sites in the Closed Landfill Program where Per- or polyfluorinated alkyl substances (PFAS) have been detected. This list is made available by the Minnesota Pollution Control Agency (MPCA).

Government Publication Date: Jan 3, 2024

Clandestine Drug Labs: CDL

The Methamphetamine Laboratory Program at the Minnesota Department of Health (MDH) works to protect human health by providing technical advice on the remediation of clandestine methamphetamine production laboratories (meth labs) and decontamination of property exposed to meth lab activities.

Government Publication Date: Aug 23, 2021

Animal Feedlots: FEEDLOTS

The Minnesota Pollution Control Agency (MPCA) tracks locations of animal feedlot facilities. The locations of animal feedlots provide information and context to support decisions on animal health, land use, and maintaining environmental quality.

Government Publication Date: Aug 27, 2025

Tier 2 Report: TIER 2

A list of Tier 2 Facilities in Minnesota. This list is provided by Minnesota Department of Public Safety overseen by the Division of Homeland Security and Emergency Management.

Government Publication Date: Sep 14, 2022

Bulk Storage Permits: BULK STORAGE

The Minnesota Department of Agriculture's Licensing Information System (LIS) lists individuals or companies who hold licenses, certificates and/or permits required by state law and regulated by the Department. This database only contains those LIS licenses related to anhydrous ammonia storage facilities and bulk pesticide/ fertilizer storage facilities.

Government Publication Date: Nov 6, 2025

Tribal

No Tribal additional environmental record sources available for this State.

County

No County additional environmental record sources available for this State.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

Appendix C

RE: Duluth IAP – Site Research Report
FUDS E05MN033
DACA45-03-C-0018
Duluth, Minnesota
EMR Project 6610

[redacted]

Enclosed are two copies of the final Site Research Report for the Duluth International Airport (Duluth IAP) FUDS Project, located in Duluth, Minnesota. The report summarizes the project background, former and current environmental sites, geologic and hydrogeologic setting, potential sources within the Cirrus Project Area, potential sources within the Lot 3 Project Area, and recommendations.

Five additional proposed Areas of Concern (AOC) were identified within, or immediately adjacent to, the two current project areas. EMR has proposed additional borings and wells to investigate these new AOCs when work progresses in the Cirrus and Lot 3 Project Areas this spring.

Twenty additional proposed AOCs were identified outside the current project areas and within the property boundary of the Duluth IAP. EMR has recommended that these additional AOCs undergo a FUDS Preliminary Assessment of Eligibility.

We appreciate the opportunity to work with the United States Corps of Engineers. Please contact Scott Carney or me at (218) 625-2332 if you have any questions. Thank you.

Sincerely,
EMR, Inc.

1.0 INTRODUCTION

1.1 Project Overview

The United States Army Corps of Engineers (USACE) Office in Omaha, Nebraska has contracted EMR, Inc. (EMR) of Duluth, Minnesota to complete a Site Investigation of two project areas located at the Duluth International Airport (Duluth IAP). The work is contracted under the Formerly Used Defense Sites (FUDS) Program contract DACA45-03-C-0018. The Duluth IAP FUDS Site Number is E05MN0033.

Two FUDS project areas have been identified at locations formerly used by the United States Air Force (USAF) and have been named the Cirrus Project Area (CPA) and the Lot 3 Project Area (L3PA). The CPA is the location of two areas of interest. Lot 17 is suspected of containing petroleum, solvents, pesticides and Polychlorinated Biphenyls (PCBs). The west border of Lot 21, near former Site S-1, is suspected of containing solvents. The L3PA is suspected of containing solvents and hydrocarbons. Hanger 101, the first hanger built by the USAF in Duluth, is located in the L3PA.

The contracted work will result in the preparation of a Site Research (SR) Report and a Site Investigation (SI) Report. The primary objective of the SR/SI is to determine the presence or absence of chemical contamination based on historical information and biased environmental sampling. A secondary objective of the SR will be to ascertain if the project areas in the scope of services are the only remaining uninvestigated sites eligible under the FUDS program.

1.2 Property Location

1.2.1 Duluth International Airport

The Duluth IAP is a 1,995-acre facility operated by the Duluth Airport Authority (DAA) (Figures 1 and 3). The DAA is run by a board of directors and is a self-sufficient entity under the auspices of the City of Duluth.

The DAA has leased and sold various properties within the Duluth IAP to various commercial enterprises and federal military organizations. The Minnesota Air National Guard (MN ANG) is currently under lease until 2013 for use of 300 acres at the Duluth IAP. The MN ANG leases land at the Duluth IAP to support the 148th Fighter Wing, a reserve component of the USAF whose mission is tactical reconnaissance utilizing F-16A Fighter Jets. Historically, the Duluth IAP was jointly operated by the United States Air Force (USAF), MN ANG, and the City of Duluth. However, the USAF ceased operations at the Duluth IAP on March 31, 1982. Since their departure the USAF has retained the responsibility for managing the restoration of an estimated 20 former USAF Air Combat Command (ACC) sites.

1.2.2 Cirrus Project Area

The CPA encompasses property currently owned by the Cirrus Design Corporation (Cirrus) or Aileron, LLC (Aileron), but was formerly leased by the USAF from the City of Duluth (Figure 2). The address of Cirrus is 4515 Taylor Circle, Duluth, Minnesota 55811. The Cirrus Project Area includes all of Lots 17 through 21 of Block 4 and Lot 1 of Block 5 of the Airport Division in the City of Duluth (Figure 4). Cirrus owns all lots other than Lots 18 and 19, owned by Aileron. The Cirrus Project Area occupies the SW ¼ of the SE ¼ of Section 2, Township 50 North and Range 15 West. The CPA borders, depicted in Figures 1 and 4, generally measure 795 feet east-west by 620 feet north-south. Current improvements within the CPA consist of the Cirrus Production Building and the Customer Service/Paint Shop Building (Figure 2).

1.2.3 Lot 3 Project Area

The L3PA consists of Lots 2, 3, and 4 of Block 4 of the Airport Division of the City of Duluth (Figure 4). All lots are owned by the City of Duluth. Lot 2 is leased by the Commemorative Air Force (CAF) – Lake Superior Squadron 101 and is the location of Building 101 (Figure 2). The address of the CAF is 4931 Airport Road, Duluth, Minnesota 55811. Lot 3 has no current lessee and was the former location of Building 102. The MN ANG currently leases Lot 4. The L3PA occupies the SE ¼ of the SE ¼ of Section 2, Township 50 North and Range 15 West and measures 936 feet (east-west) by 402 feet (north-south) (Figure 4). The project area begins at the northeast corner of Lot 2, traverses 402 feet south, then traverses 936 feet west following borders of Lots 2, 3, and 4; turns north 345 feet, bends east 75 feet then north 57 feet; then traverses 861 feet to the east to the point of origin.

1.3 Project Purpose

The primary objective of the SR Report process is to research site history, identify and locate potential activities that may have resulted in releases into the environment, and determine the presence or absence of contamination based on historical information and previous environmental investigation.

1.3.1 Project Objectives

The following are listed as objectives of the Site Research (SR) in the Scope of Services for Duluth IAP – FUDS Sites received from the US ACE and dated September 23, 2003:

1) Document and cite research to ascertain that the sites prescribed in the scope of services are the only remaining uninvestigated FUDS sites at the Duluth IAP.
2) Gather and document the full background of the known sites.

1.3.2 Scope of Services

The following list identifies the scope of services to achieve the project objectives:

1) Review all pertinent historical information, including aerial photos, engineering drawings, site reports, and interviews with knowledgeable personnel.
2) Document findings of the review. The report shall include a list of all references utilized, a list of all personnel interviewed, a summary of reviews and interviews, pertinent aerial photos, a United States Geological Survey (USGS) topographic map showing site locations, and a preliminary site map.
3) Construct a preliminary site map with distance scale to help plan the next phase of work.
4) Revise the draft SR Report to incorporate USACE and regulatory agency review comments and be resubmitted as a final in the SR/SI Report.

1.4 Project Involvement

1.4.1 Project Management

The Duluth IAP FUDS Contract DACA45-03-C-0018 for FUDS Site E05MN0033 is managed by the United States Army Corps of Engineers – Omaha District. The Project Manager is Marvin Taylor (402) 221-7181. The contract is with EMR, headquartered out of Lawrence, Kansas. The EMR Duluth, Minnesota office is the managing contractor; David Winter, P.G., is the Project Manager (218) 625-2332. Points of contact are listed in Table 1.

1.4.2 Agency Oversight

Agency oversight of work at FUDS Site E05MN0033 is by the Minnesota Pollution Control Agency (MPCA). Two Project Managers will review project work, Jane Mosel (218) 529-6250 and Mark Elliot (218) 529-6269. Soil analytical results will be compared with MPCA risk based Soil Reference Values (SRVs) and Soil Leaching Values (SLVs). Groundwater analytical results will be compared with Minnesota Department of Health (MDH) Health Based Values (HBVs) and Health Risk Limits (HRLs).

The USACE project management team will review data and reporting throughout the project. The project management team is anticipated to include a Project Chemist, Project Geologist, Project Quality Control, and Contracts personnel.

No agency oversight other than the MPCA and USACE is anticipated.

1.4.3 Points of Contact

Several current leaseholders at the CPA and L3PA have interest in the SR and SI work at FUDS Site E05MN0033. They include the MN ANG (Col. Steve Wabrowetz), the DAA (Brian Rykes), and Cirrus Design Corporation (Jason Dillon). Contact information for these and other potentially interested parties are included in Table 1.

2.0 FACILITY OVERVIEW

2.1 Facility Description

The Duluth IAP is located in St. Louis County in northeastern Minnesota (Figure 1). The Duluth IAP is located approximately 7 miles northeast of downtown Duluth at the western end of Lake Superior. The Duluth IAP covers approximately 1,995 acres and is operated by the DAA. The main east-west runway measures 10,150 feet by 150 feet and is utilized by MN ANG, commercial and civilian aircraft (Figure 3). A secondary northeast-southwest trending runway trends northeast-southwest and measures 5,650 feet by 150 feet. MN ANG facilities are concentrated in the northeast corner of the Duluth IAP, while the majority of southern portion of the facility is utilized by civilian entities including the Duluth IAP terminal, which is located in the southeast corner of the property. The northern portions of the Duluth IAP property are largely undeveloped with the exception of the Northwest Airlines Maintenance Base and the FAA radar installation (Figure 3).

2.2 Current Land Use

2.2.1 City of Duluth

The Duluth IAP is owned by the City of Duluth and operated by the DAA. The Duluth IAP currently encompasses roughly 2,000 acres. Portions of the Duluth IAP are leased to the organizations discussed below while the remainder of the property is utilized by various entities of the DAA. Northwest Airlines, American Airlines, and Fed Ex all currently fly out of the Duluth IAP. Northwest Airlines also operates an aircraft maintenance facility located north of the main runways (Figure 3).

2.2.2 Minnesota Air National Guard

The 148th Fighter Wing of the MN ANG operates on property leased in a variety of locations within the Duluth IAP boundaries. The largest parcel of land occupied by the MN ANG covers approximately 137.60 acres and is located in the northeast corner of the airport (Figure 3). The MN ANG leases roughly a total of 300 acres (including the main base) from the City of Duluth. The leases expire June 30, 2013. MN ANG environmental cleanup sites are discussed further in Section 3.2.

2.2.3 Air Combat Command

The United States Air Force Air Combat Command, which conducted activities within the airport boundaries from the late 1950's until 1981, no longer operates facilities in this area at this time. However, they are still responsible for several Environmental Restoration Program (ERP) (formerly the Installation Restoration Program – IRP) sites within airport boundaries. ACC environmental sites are discussed further in Section 3.2.

2.2.4 Additional Lessees

The Majority of the leased Duluth IAP land is referenced above. However, numerous small lessees are present on the southern half of the property. Lessees include the United States Navy and the Bureau of Prisons that each lease parcels totaling less than 20 acres. These leases also expire June 30, 2013.

2.3 Property History

The Duluth IAP originally began with the acquisition of 640 acres by the City of Duluth from St. Louis County in 1929. The airport was constructed and dedicated in 1930 as the Williamson-Johnson Municipal Airport. The name remained until 1963 when the airport was renamed the Duluth International Airport. Following WWII the USAF constructed facilities south of the main east-west runway on land leased from the City of Duluth. The MN ANG, a part of the USAF, began to build facilities on the northeast corner of the airfield in 1948 and the 179th Fighter Squadron was formed. The initial phase of MN ANG construction included a hanger (Building 101), an operations center (Building 102), a fire and rescue station and a motor pool. In 1949 the 179th Fighter Squadron moved its operations from the Duluth Armory to their current location on the northeast corner of the airport. Building 103 was constructed in 1955. In 1960 the 179th Fighter Squadron was renamed the 148th Fighter Group. This name lasted until the mid-1990's when the name changed to the 148th Fighter Wing. In 1999 the 148th Fighter Wing began renovations of the base to go from air-to-air missions to air-to-ground missions. The USAF no longer maintains a presence at the airport; however the MN ANG continues its operations.

Cirrus Design Corporation (Cirrus) located their world headquarters at the Duluth IAP in 1994 and began the design, manufacture, and sale of their light aircraft. A few years later Cirrus underwent a major production facilities expansion and later opened the Customer Service and Paint Facility (Figure 2). In 1996 Northwest Airlines opened the maintenance facility on the north side of the airfield. The most recent addition to the Duluth IAP is the DAA "Hand W. Storms" Snow Removal and Equipment Maintenance Facility, which opened in 2003.

A time line of major Duluth IAP events can be found in Table 2.

3.0 RECORDS REVIEW OF PREVIOUS WORK

3.1 Air National Guard Sites

EMR personnel contacted Lt. Col. Steve Wabrowetz, Environmental Manager with the 148th Fighter Wing to access and review documents related to the history of MN ANG environmental site at the Duluth IAP. The file search revealed four categories of sites: Storage Sites, Radiation Sites, Disposal Sites, and Miscellaneous Sites. As of 2001 there were 7 active MN ANG sites within the Duluth IAP. Additional details regarding the MN ANG sites are found in Tables 3, 4, 5, and 6 and the site locations are found on Figures 3 and 4. Much of the information discussed below was summarized from the *IRP Management Action Plan* (Montgomery Watson, 2001).

3.1.1 Storage Sites

- Site 3 – Defense Property and Disposal Office (DPDO Storage Area C). Site 3 is located in the southwest portion of the Duluth IAP or west of the CPA. The area covers approximately 5 acres and was used from 1965 until 1980 to store waste petroleum, oil and lubricants; solvents; and chemicals. A maximum of 80 to 100 55-gallon drums were stored at the site at any one time (Montgomery Watson, 2001). The site is zoned industrial and is undergoing long term groundwater monitoring. Contaminated soil was removed in July 1996 to minimize the potential for residual hydrocarbon contamination. The area was utilized as a storage area for waste petroleum, oil, lubricants, solvents, and transformers containing PCBs. Some Constituents of Concern (COCs) for this site include Volatile Organic Compounds (VOCs), Semi-Volatile Organic Compounds (SVOCs), chromium, pesticides, Total Petroleum Hydrocarbons (TPH), metals, and Benzene, Toluene, Ethylbenzene and Xylenes (BTEX).

- Site 4 – Fuel Storage Area. Site 4, also known as the MN ANG Petroleum, Oil and Lubricants (POL) Area, encompasses approximately 15 acres and is located immediately west of the CPA. Site 4 also includes the former ACC SP-1 site. The site includes two 420,000-gallon and one 210,000-gallon ASTs and is zoned industrial. An additional 210,000-gallon AST was removed in 1982. Long term groundwater monitoring continues at the site. In July 2000 contaminated soil was removed from drainage ditches and berms in order to minimize the potential for residual hydrocarbon contamination. The area was utilized as a storage area for JP-4. COCs for this site include VOCs, TPH, metals, benzene, and BTEX.

- Site 8 – Old DPDO Storage area. Site 8 was formerly located on Lots 19, 20, and 21 and covers approximately 15 acres. Site 8 includes the former ACC S-1 site, both of which are encompassed by the CPA. The area was utilized from 1950 to 1964 as a storage area for pesticides, waste fuel oil,

solvents, and transformers containing PCBs. The area is zoned for industrial purposes. A Remedial Investigation (RI) was completed on the site in 1990 and a Feasibility Study (FS) was completed in 1992. The FS recommended No Further Action for the Site, which was granted by the MPCA (1993). COCs for this site included barium, chromium, pesticides, PCBs, TPH, and metals.

- Site 17 – Base Supply Storage Area. Site 17 covered approximately 0.2 acres and was located in the southwest corner of the Duluth IAP or west of the CPA. Site 17 contained a 120-foot by 80-foot, diked and paved area that was used by the USAF from 1977 until 1981 to store fuels, lubricants, hydraulic fluids and antifreeze. The site was used by the DRMO from 1981 until 1990 to store hazardous materials and wastes. Site 17 includes the former ACC Site S-3. The area is zoned for industrial use and is a closed site (Montgomery Watson, 2001). COCs for this site included VOCs, SVOCs, pesticides, TPH, and metals.

- Site 18 – Hazardous Waste Storage Area. Site 18 is located due north of the current project areas and north of the main east-west runway and includes former ACC site S-4. Site 18 was used to store transformers containing PCBs, paints, solvents, adhesives, sealants, pesticides, fuels, DDT, oils, lubricants, and antifreeze. The area is zoned for industrial use and is a closed site (Montgomery Watson, 2001). In October of 1996 contaminated soil was removed in order to minimize the potential for residual hydrocarbon contamination. DPDO personnel removed DDT in November 1981. COCs for these sites included toluene, metals, radiation, TPH, and VOCs.

- Site 19 - PCB Storage Facility. Site 19 is located adjacent to Site 18 and was used for the storage of PCBs, paints, solvents adhesives, sealants, pesticides, fuels, oils and antifreeze. The site featured an enclosed 6-inch high containment dike. As of 1982, no evidence or record of spillage existed. The site includes former ACC Site S-5.

3.1.2 Radiation Sites

- Site 10 – Low Level Radioactive Waste Disposal. Site 10 is located due north of the current project areas on the north side of the main east-west runway. The area was formerly used as a disposal site for Low Level Radioactive Waste Materials, Cathode Ray Tubes, oscilloscopes, and radio luminous dials. The area is zoned for industrial purposes and is a closed site (Montgomery Watson, 2001). COCs for this site included chromium, radium 226, radium 228 strontium 90, tritium, uranium, PCBs, and pesticides. Site RD-1 is located north of the main east-west runway and west of the FAA radar site. This site was in operation in the 1950's and was a disposal site for materials including cathode ray tubes, scopes

and watch dials. The materials were disposed of in a 15 foot deep by approximately 40 foot long trench, and covered with garbage, general refuse, and soil.

3.1.3 Disposal Sites

- Site 20 – Runway Joint Sealing Tar Drum Disposal Site. Site 20 is located south of the Northwest Airlines Maintenance Facility building. The area was formerly used as a disposal site for runway joint sealing tar. Drums containing runway joint sealing tar were removed in November of 1988 in order to eliminate a source of potential contamination. The area is zoned for industrial use and is a closed site (Montgomery Watson, 2001).

- Site 26 – Ramp Disposal Area. Site 26 is located in the western portion of the current ANG base. JP-4 contaminated materials were identified during an SI conducted in 1995. The site has subsequently been closed (Montgomery Watson, 2001). COCs for this site included SVOCs, BTEX and phenol.

3.1.4 Miscellaneous Sites

Site 2 – Fire Training Area. Site 2 consist of two former fire training areas and is located southeast of the Northwest Airlines Maintenance Facility building. FT-1 was in operation from 1951 to the early 1960's while FT-2 was in operation from early 1960's until 1987 (Montgomery Watson, 2001). Materials disposed at Site #2 include JP-4, paint thinners and solvents. The area is zoned for industrial use and is undergoing long term groundwater monitoring. In July of 1994, contaminated soil was removed to minimize the potential for residual petroleum contamination. JP-4, paint thinners, and solvents have been documented at the site. COCs for this site included VOCs, SVOCs. TPH, metals, BTEX, trans- 1, 2-Dichloroethene, Trichloroethene, and barium.

- Site 21 – Imhoff Tank Treatment System. Site 21 is located on the east central side of the current ANG base and was in operation from 1949 to 1969. A RCRA Facility Investigation (RFI) was completed at the site. The site is zoned for industrial use and contains a system to treat sewage from industrial and administrative areas. COCs for the site included VOCs, metals, SVOCs, and TPH.

- Site 22 – B/125 and NDI Septic System. Site 22 is near buiding 125 in the southwest corner of the Duluth IAP or west of the CPA. The site has two septic system to contain and treat sanitary waste water. The B/125 system was installed in 1972 and abandoned in 1991. The NDI system was installed in 1960 and is still in use. COCs for the site include metals, TPH, and toluene. During a Risk Assessment it was determined that no investigation was required for groundwater or surface water, however soil

samples were collected. The area is zoned for industrial use and was closed by the MPCA (Montgomery Watson, 2001).

- Site 23 – Aircraft Parking Ramp. Site 23 is located on the western side of the current MN ANG base. The area serves as a direct mission area. JP-4 has been found at the site. In September of 1993 contaminated soils were removed to minimize the potential for residual petroleum contamination. Long term groundwater monitoring was completed in 2000. COCs include TPH and BTEX in the soil.

- Site 24 – Engine Run up and Test Pad. Site 24 is located west of the current MN ANG base. The site is partially covered with tarmac and is a direct mission area. Contaminated soils were removed in September 1993 to minimize the potential for residual petroleum contamination. The site has been subsequently closed (Montgomery Watson, 2001). TPH and BTEX were the primary COCs in the soil.

- Site 25 – MN ANG Motor Pool Area. Site 25 is east of Site 21 within the current MN ANG base. Contaminated soils were excavated in December 1999 to remove free product. An Interim Remedial Action (IRA) for Groundwater was recommended, and long term groundwater monitoring continues at the site. Oils, fuels, and solvents have been found on the site. COCs for this site include BTEX, SVOCs, and VOCs.

- Site 27 – Former Building 102 Area. Site 27 is located along Airport Rd. between Building 101 and Building 103. Work at the site began with the removal of a fuel oil tank and fuel oil impacted soils adjacent to Building 103 in 1998. A Limited Site Investigation (LSI) was conducted and resulted in the detection of petroleum and chlorinated compounds in the groundwater. A SI was conducted in 2001 and chlorinated compounds were detected in the former location of Building 102. COCs for this site include TCE, vinyl chloride, cis-1, 2-DCE, and other VOCs.

3.2 Air Combat Command Sites

EMR Personnel contacted Jim Holley with the Air Combat Command (ACC) at Langley Air Force base in Virginia and Marvin Taylor with the U.S. Army Corp of Engineers, Omaha District for information related to ACC sites (Table 1). Review of the available files provided historical and current information regarding ACC Sites and revealed two site categories; Leaking Underground Storage Tank Sites and Disposal Sites. Currently, there is only one active ACC project site (LF-08). Information for the sites discussed below was primarily taken from the Phase I Records Search (Engineering-Science, 1982) and the Environmental Restoration Program (ERP) Management Action Plan (US ACE, 2003). ACC site information is summarized in Tables 7 and 8. Site locations are illustrated on Figures 3 and 4.

3.2.1 Leaking Underground Storage Tank Sites

- ST-12 RAPCON. The RAPCON site is located north of the main east-west runway and southeast of the FAA radar site. Two 500-gallon USTs were discovered and removed in 1993. During the removal of the USTs approximately 45 cubic yards of contaminated soil were removed and thermally treated. Samples collected at the excavation boundaries were below MPCA action levels. The MPCA approved a no further action request in 2000.

3.2.5 Disposal Sites

- LF01 (formerly Site #1/D-1) Goose Missile Site Dump #1. Site LF01 is located on the north side of the Duluth IAP and has been covered by the new Northwest Airlines Maintenance Base access road (Stebner Road). The approximate size of the LF01 site is 100 feet by 75 feet. Approximately 15 55-gallon drums of pesticides were found at the site and were removed in 1992. Documented contaminants include DDT, DDD, DDE (detected in trace amounts), total organic carbon, pH, and total organic halogen. Site investigation consisted of a Phase I Environmental Site Assessment (ESA), Phase II, Stage 2 investigation and a Stage 3 RI/FS. Sampling conducted during these investigations resulted in the detection of generally low concentrations of metals and VOCs in soil, groundwater and sediments. The site was closed by the MPCA in 2000 and the monitoring wells were abandoned.

- LF06 (formerly Site #5/D-4) South Goose Missile Site Dump. Site LF06 is located on the north side of the Duluth IAP and east of Stebner Road. The LF06 site was a surface dump that measured approximately 5 feet by 35 feet. Drums of unknown material were found at the site in 1982 and were removed prior to 1988. Investigation conducted at the site consists of a Phase I ESA, Phase II, Stage 2 and Stage 3 RI/FS. Chemicals found to exceed standards or criteria consist of zinc, copper and nickel, all of which were in sediment samples. Arsenic was also found in soil samples at concentrations that slightly exceeded the SRV. No other COCs were identified during additional sampling conducted during and after the Phase 3 RI/FS and the site was subsequently closed by the MPCA in 2000. The monitoring wells were abandoned in 2001.

- LF07 (formerly Site #6/D-2) Goose Missile Site Dump #2. Site LF07 is located in the extreme northern portions of the Duluth IAP and west of Stebner Road. The dump was approximately 50 feet by 50 feet and contained approximately 10 55-gallon drums of deicing agent. The drums were removed in 1992. Investigations conducted at the site consist of a

Phase I ESA, Phase II, Stage 2, and a Phase 3 RI/FS. Sampling conducted during the investigations indicated one groundwater COC (minor concentrations of oil and grease). Elevated concentrations of cadmium, chromium copper, lead and nickel were detected in sediment samples. However, chromium, lead and nickel were also detected in upgradient sediment samples suggesting that they are not related to operations at LF07. The site was closed by the MPCA in 2000 and the monitoring wells were abandoned in 2001.

- LF08 (formerly Site #7/D-6) Runway 13 NE Disposal Area. Site LF08 is located north of the main runway at the terminus of Stebner Road on the north side of the Northwest Airlines (NWA) Maintenance Facility. The LF08 Site was utilized from 1950 to the 1970's for the disposal of general refuse, aircraft parts, empty and full drums, and construction materials. An interim remedial measure was conducted in 1991-1992 that consisted of the removal, decontamination and recycling of all metallic debris and the removal 1,925 cubic yards of contaminated soil. Soil COCs consisted of mercury and oil and grease. Groundwater COCs included TCE, benzene, trans-1,2-dichloroethene and dichlorobenzene. Low concentrations of halogentated organic compounds were detected in surface water samples. Subsequent investigations have defined the limits of the TCE impacted groundwater. A Hydrogen Releasing Compound (HRC) pilot study was conducted in 2000 and an extended HRC pilot study was conducted in 2002-2003. A focused Feasibility Study for the remediation of impacted groundwater is underway. Long term monitoring is currently scheduled through 2007.

- LF10 (formerly Site #9/D-9) Disposal Pit. Site LF10 is located on the south side of the Duluth IAP along Stebner Road. The site consisted of a 7 foot by 8 foot pit that was utilized in the mid 1960's as a disposal area for general refuse, percuric acid and acetone from the medic's clinic. A Phase II, Stage 2 investigation, consisting of a magnetometer survey was conducted and did not definitively define the location of the pit. A Stage 3 RI/FS was conducted and resulted in the discovery of groundwater COCs consisting of barium, TCE and TPH. The site was closed by the MPCA in 2000 and the monitoring wells were abandoned in 2001.

3.3 Former Used Defense Sites

FUDS are properties that were previously owned, leased, possessed, or otherwise operated by the Department of Defense (DOD) or any of its components. The FUDS program is an important part of DOD's ERP and was officially established in 1983. The U.S. Army is the executive agent in charge of carrying out the program with the USACE assuming the primary role. The program's mission is to complete environmental restoration at any former DOD sites, regardless of which sector of the military controlled the property or was responsible for the suspected contamination.

EMR Personnel contacted Marvin Taylor of the USACE Omaha District (Table 1) to inquire about previously investigated FUDS. A review of the supplied information revealed four sites; Building 112, Natural Resources Research Institute (NRRI) USTs, Steam Line Removal, and Building 102 and are discussed below. Reviewed FUDS information is summarized in Table 9 and the site locations are shown on Figures 3 and 4.

3.3.1 Building 112

- Building 112 was located on the Lot 17 of Block 5 within the CPA and north of the current Cirrus Customer Service/Paint Shop Building. The project consisted of the demolition Building 112 (pumphouse) and the removal of two 55,000-gallons aviation fuel USTs and an additional UST (Lot #1 UST) located to the east (Figures 3 and 4).

3.3.2 NRRI tanks

- The Natural Resources Research Institute (NRRI) Site is located along Airport Road in the southwest corner of the Duluth IAP (Figure 2). One 15,000-gallon #5 Fuel Oil UST and three 30,000-gallon #2 fuel oil USTs and associated underground piping were removed from the Site in 1992. All USTs were in good condition and soil contamination was assumed to be related to spills and overfills (TPT, 1993). Approximately 690 cubic yards of contaminated soils were placed in the north end of the UST basin and encapsulated in plastic. Clean soils were returned to the UST basin to return it to grade. Soil sampling of the excavation sidewalls and base indicated that Total Hydrocarbons as Fuel Oil concentrations ranged from 1,760 ppm to 4,200 ppm. The USACE conducted a RI that was documented in a RI Report Form (USACE, 1997). The RI Report Form concluded that the remaining soil contamination did not pose a significant risk and that no groundwater plume exists. The site was apparently closed and no further action was required (Sharon Lehn, personnal communication, 2004).

3.3.3 Steam Line Removal

- The Steam Line Removal project involved the removal of asbestos-insulated overhead steam lines from portions of both the CPA and L3PA and other areas south of Airport Road. The project was completed in 1997 according to the remedial design.

3.3.4 Building 102

- The Building 102 project consisted of the demolition of Building 102, which was completed in 1999. The site is located along Airport Road between Buildings 101 and 103. Building 102 was constructed by the USAF in the 1950s and was used until 1984 primarily as office space.

4.0 Proposed Additional FUDS Sites

The review of historical documents, historical aerial photos and interviews with former base personnel (Appendix D), identified several sites with the potential for environmental impacts. The rationale used to define a potential FUDS AOC include: incomplete site investigation data; sites or facilities with known or implied activities or material usage that may impact the environment and/or a lack of available environmental investigation information.

4.1 Proposed Additional FUDS AOCs Inside the Project Areas

The following is a listing of five additional FUDS AOCs that were identified through this SR phase and are either wholly or partially within the current project areas. These newly identified, additional FUDS AOCs are identified on Figure 5a and listed in Table 10. All chronological references were determined from reviewed documents or aerials photos (Figures 9 –20).

1) Former Paint Storage Building (Building s114). The Former Paint Storage Building was located in Lot 20 of the CPA. The building apparently was used for painting and paint storage and was constructed between 1953 and 1964 and was removed between 1995 and 2002. In later years, Building s114 was listed as a parachute shop. Following closure of the Air Force Base, Building s114 was used as a metal plating facility by Plating Specialties Inc. Based on phone book records Plating Specialties Inc., occupied Building s114 from 1985 until 1995. Potential materials used at this AOC include paints, solvents, metals, bases and acids.

2) Lot 19 Salvage Yard. According to former USAF personnel the unknown grouping of objects visible in Lot 19 in the 1964 aerial photo may have been a salvage yard (Figure 11). Potential materials include diesel fuel, gasoline, oil, grease and metals.

3) Building 139 Fuel Oil Tanks. Building 139 was located in Lot 1 formerly featured three (3) 265-gallon fuel oil tanks (Appendix E). It is assumed that the fuel oil tanks supplied fuel to backup heating or electrical systems. It is not known whether the tanks were ASTs or USTs. Building 139 was constructed between 1953 and 1964 and was removed between 1988 and 1995. Potential materials consist of fuel oil.

4) Building 113 Solvent Storage. Building 113 was located on lot 17 of the CPA. Based on a 1961 US Army utility maps (Appendix E) Building 113 supplied the aircraft washrack (discussed below) with water, hot water, compressed air, and solvents. According to the 1961 US Army map, solvents were transferred from Building 113 to the washrack through a 1-inch diameter underground line. It is assumed that solvents were stored

within the building but containers type and capacity is unknown. Building 113 was constructed between 1953 and 1961 and remained in place until after 1998. Chlorinated solvents, including vinyl chloride, were detected in the groundwater in the vicinity of Building 113 during an investigation conducted by Cirrus in 2001. Potential materials consist of solvents.

5) Lot 4 Hazardous Storage Area. A 1973 U.S. Air Force Facilities reference map (Appendix E) shows a "Hazardous Storage" area southwest of Building 103 on Lot 4 of the L3PA. No other information was found referencing this Hazardous Storage area. Potential materials include pesticides, waste/used fuel, oil and solvents, PCB containing transformers and metals.

4.2 Proposed Additional FUDS AOCs Outside of the Project Areas

The following are 19 proposed additional FUDS AOCs that were identified and are outside the current project areas. These newly proposed, additional FUDS AOCs are identified in Figures 5a and 5b and listed in Table 10.

1) Lot 16 Aircraft Washrack. The aircraft washrack was located on Lot 16 and adjacent to the CPA. The washrack apparently consisted of a concrete tarmac area measuring 85 feet by 85 feet with two wash stations equipped with water, air and solvent services that were supplied by underground piping from Building 113 (Appendix E). The washrack tarmac apparently was drained by a catch basin, which in turn flowed northeast to an undetermined discharge point. Potential material usage includes jet fuel, solvents and metals.

2) Building s307 Fuel Oil Tank (Building s307). Building s307 was located on the corner of Stebner Road and Jefferson Street, east of the L3PA (Appendix E). The building was constructed between 1953 and 1964 and was removed between 1998 and 2003. The 1961 Army utility map shows a 265-gallon fuel oil tank on the east side of the building. Potential material usage consists of fuel oil.

3) Lot 1 UST. The Lot 1 UST was located approximately 30 feet south of Cleveland Avenue in Lot 1, east of the L3PA. The UST was apparently removed in conjunction with the Building 112 FUDs project. However, there was no information available for review to determine the UST contents or capacity or whether contamination was discovered during the removal. Potential material usage includes gasoline, diesel fuel, aviation fuel and kerosene.

4) B E Laboratory and Fuel Oil Tanks (Building 306). Building 306 is referenced to as the "B E Laboratory" on a 1973 Air Force Facilities map (Appendix E). Building 306 was constructed after 1953 and remains

today. The function of the laboratory and potential material usage is not known but material usage included two fuel oil tanks of unknown capacity.

5) Rocket Check/Assembly/Storage Building (Building 305). Building 305 was located east of the L3PA served as a rocket check, assembly and storage area. Building 305 was constructed prior to 1953 and remains standing today. However it is not known how long the building was used in a rocket related capacity. Potential material usage includes rocket fuel.

6) Crash and Rescue Building (Building 303). Building 303 was located northeast of the L3PA and was apparently constructed in 1951-1952 and removed between 1998 and 2002. The building housed fire fighting vehicles, equipment and personnel. Potential material usage includes diesel fuel, gasoline, and fire fighting chemicals.

7) Jet Fueling Vaults. The Jet Fueling Vaults consisted of two below grade vaults that served as aviation fuel access points and were located on the north edge of the tarmac, north of the L3PA. Utility maps show that fuel was delivered to the vaults from the two 55,000-gallon USTs located near Building 112. The fueling vaults were constructed in 1954 and were removed between 1998 and 2002. Potential material usage consists of aviation fuel.

8) PME Laboratory (Building 304). Building 304 is referred to as the "PME Laboratory" on a 1973 Air Force Facilities map (Appendix E). The function of the laboratory and potential material usage is not known.

9) Steam Generation Plant. The steam generation plant was located one block south of Building 101. The plant was converted from coal to fuel oil in the 1970's and presumably had fuel oil storage. Potential material usage includes coal and fuel oil.

10) Building 302 Fuel Oil Tank. Building 302 was a water pumping station that featured a 250-gallon fuel oil tank that likely supplied a back up generator. It is not known if the tank was an AST or UST. The building was constructed after 1953 and remains today. Potential material usage consists of fuel oil.

11) Building 301 Fuel Oil Tank. Building 301 served an unknown purpose but did feature a 550-gallon fuel oil tank. The first available reference to the building and associated tank was on a 1961 Army utility map (Appendix E). Building 301 was removed between 1998 and 2003. Potential material usage consists of fuel oil.

12) CAP Hanger Fuel Storage Area. The CAP Hanger Fuel Storage Area was constructed after 1953 and remains today (Appendix E). The fuel storage area consists of three ASTs and has a total capacity of 66,000-gallons. Potential material usage includes aviation fuel and gasoline.

13) USAF Motor Pool Area. The Motor Pool Area located southwest of the L3PA and was the maintenance base for Air Force motor vehicles. Potential material usage includes diesel fuel, gasoline, virgin and waste oil, grease and metals.

14) Base Gas Station. The Base Gas Station was located southeast of the L3PA and was constructed in 1953. Potential material usage includes gasoline and diesel fuel. The exact location of the Base Gas Station is not known at this time, and is not located exactly on Figure 5a.

15) D-3 Goose Missile Dump Site. D-3 is located approximately 750 feet west of Stebner Road on the north side of the Duluth IAP. Empty petroleum product barrels observed in a wooded ravine area at D-3 (Engineering-Science, 1982). No other site information was found.

16) D-5 East Goose Missile Site. Site D-5 is east of Stebner Road in the northern portion of the Duluth IAP. Wastes such as oil cans, general refuse and diesel engines filters were observed at the site in 1981 (Engineering-Science, 1982).

17) D-7 C-ration Disposal Area. Site D-7 is located northeast of the NWA Maintenance Facility and was used for burial of old C-rations and materials such as fencing and construction rubble during the 1950's (Engineering-Science, 1982). The Phase I Records Search report states "No potential for contamination exists at this site due to the nature of the wastes disposed of" (Engineering-Science, 1982).

18) D-8 Hardfill Burn Area. Site D-8 is located north of the main east-west runway east of the FAA radar site. This site was utilized from 1956 to 1957 and materials including scrap metal, construction rubble, and burnt refuse have been located at the site. Some non-hazardous materials were burned here. The site was apparently covered with native soil after dumping ceased (Engineering-Science, 1982).

19) MD-1 and MD-2 Munitions Disposal Sites. Sites MD-1 and MD-2 are located in the northern part of the Duluth IAP in the vicinity of D-1. These munitions disposal sites were used during the 1950's to 1972. Explosives disposed at these sites ranged from small arms ammunition to aircraft catapults (Engineering-Science, 1982).

Sites 15 through 19 were identified in the Phase I Records Search conducted by Engineering-Science (1982). These sites were not ranked as a priority in the Phase 1 Records Search, and at the time, were within the fenced and secure airport perimeter. Sites 15 through 19 are currently in a non-secure portion of the Duluth IAP. According to available information the sites have not been investigated beyond the Records Search conducted in 1982.

5.0 PRELIMINARY REGIONAL CONCEPTUAL MODEL

5.1 Geographic Description

5.1.1 Topography

The City of Duluth is situated along a northeast to southwest trending hillside that forms the northwestern rim of the Superior Basin. The hillside rises steeply from the Lake Superior shore (602 feet above mean sea level (MSL)) to elevations ranging from approximately 1,300 feet to 1,350 feet MSL along the hill crest. Several moderately incised, narrow stream valleys are found along the hillside with relief ranging from 30 feet to 50 feet. As would be expected, the stream valleys are fairly straight, due to the steep gradient and are generally oriented perpendicular to the topographic slope, or northwest to southeast. An average topographic gradient of the hillside is 0.077 ft/ft, as measured along 21st Avenue east.

The hillside crests approximately 1 mile to 1.75 miles from the shoreline. From the crest, the ground surface plateaus and elevations increase more gradually and increase to the north-northwest. The topography of the plateau is characterized by numerous gently to moderately sloping hills and depressions with elevations ranging from 1,180 feet to 1,400 feet MSL. Topographic lows are generally marshy and wet due to high water table elevations. There is no apparent directional alignment to the topography. Streams found in the plateau meander greatly following the variable topography. Stream valleys are only gently incised with relief generally less than 10 feet.

In the vicinity of the Duluth IAP the topography becomes more subdued due to the presence of a thicker blanket of glacial sediments (Figure 1). The area is characterized by low rolling hills punctuated by expansive, flat, marshy topographic lows. Topographic relief in the vicinity of the Duluth IAP ranges from a low of 1,375 feet MSL at the southwest corner to 1,490 feet MSL at the west end of the Duluth IAP.

5.1.2 Surface Cover and Drainage

Surface water drainage at the Duluth IAP is generally split by the main east-west trending runway into northern and southern components. The majority of surface water along the north side of the runway is collected by an east-west trending drainage ditch, which empties into Beaver Creek (Figure 1). Surface water north of Airport Road and west of Taylor Circle flows westward through swales and established ditches past the POL (Figure 6). Immediately west of the POL the drainage ditch turns to the north, flows under the main east-west runway, joining the surface water from the north side of the east-west runway. Beaver Creek flows north, away from the Duluth IAP, and terminates in a marsh adjacent to the Wild Rice Lake Reservoir approximately 1.8 miles north of the east-west runway.

Surface water on the south side of the runway (South of Airport Road and east of Stebner Road) is also collected into drainage ditches that discharge into Miller Creek that flows into Lake Superior at a point 6.3 miles south-southeast of the Duluth IAP. All the drainage ditches within the Duluth IAP are labeled with an intermittent stream symbol suggesting that the ditches are not deep enough to have a base flow component.

The tarmac area within, and north of the L3PA is collected by a storm water system the flows west and then northwest. The discharge point for the storm water system is not known but is speculated to be a tributary of Beaver Creek, north of the main east-west runway (Figure 6).

5.1.3 Soil Types and Distribution

The southern St. Louis County soil survey information was obtained from the United States Department of Agriculture Natural Resource Conservation Service (NRCS). The NRCS is currently updating soils information and the data obtained was in draft form and was completed in November 2002. Complete soil descriptions for the corresponding soil units have not been fully developed. Appendix B includes the preliminary NRCS map and associated soil descriptions.

The soils throughout the improved portions of the Duluth IAP are classified as the urban-modified, Normanna-Canosia-Hermantown complex (UR-5B). The unimproved areas of the Duluth IAP property are described below.

The northern half of the Duluth IAP is dominated by marshy lowlands with slightly elevated highlands in the extreme northeast corner and the northern-most portion of the property near Martin Road. The lowlands are primarily classified as either Hermantown-Canosia-Giese complex (30-2A), Normanna-Canosia-Hermantown complex (30-4B) or Tacoosh mucky peat (1314) (NRCS, 2002). The highlands in the northern portion of the property are primarily composed of the Ahmeek-Normanna-Cathro complex (30-4D).

The majority of the southern half of the property has been improved and soils are classified as urban-modified, Normanna-Canosia-Hermantown complex. The unimproved portions of the site are generally low and marshy and are classified as Rifle peat (541), Tacoosh mucky peat (1314), or the Hermantown-Canosia-Giese complex (30-2A).

5.2 Geological Description

5.2.1 Unconsolidated Deposits

Based on the varied topography and geologic history near the Duluth IAP it is not unexpected that a variety of unconsolidated geologic units are present. According

to Hobbs (1982) and Matsch and Ojakangas (1982), the unconsolidated sediments around Duluth IAP are associated with the Mille Lacs-Highland Moraine that was formed during the Automba phase glaciation of the Superior lobe. The Automba phase consisted of a minor surge in glacial activity during the overall Late Wisconsinian retreat of the Superior Lobe. The minor advance was enough to overflow the crest of the Lake Superior basin forming the Mille Lacs-Highland moraine. The remnants of the end moraine are found along the highlands adjacent to Lake Superior and lie just west of the Duluth IAP and form a minor, discontinuous topographic high. The Duluth IAP lies in a narrow northeast-southwest trending outwash deposit that appears to have been formed during the retreat of the Superior lobe since the Mille Lacs-Highland moraine forms the western edge of the outwash deposits. Hobbs characterized the sediments along the eastern edge of the outwash as ground moraine sediments or a thin veiling of glacial till over the existing bedrock surface. The boundary between the outwash and the ground moraine sediments likely corresponds to the distinct change in topography east of the Duluth IAP as discussed in Section 5.1.1.

5.2.2 Bedrock

Consolidated bedrock units underlying the Quaternary sediments consist primarily of Middle Proterozoic (Upper Precambrian) intrusive gabbros assigned to the Duluth Gabbro Complex. The Duluth Complex in the vicinity of the Duluth IAP is subdivided into two groups: the coarse-grained, anorthositic gabbro and medium-grained troctolite and olivine gabbros. Depth to bedrock is estimated to be between 10 feet and 60 feet (Engineering-Science, 1982).

5.3 Hydrogeological Setting

The following section describes the occurrence and usage of the primary water resource aquifers near the Duluth IAP. Sources of regional hydrology information consisting of Olcott and others, 1978 and Lindholm and other, 1979 and Engineering-Science, 1982 were reviewed to develop the following section.

5.3.1 Hydrogeologic Units

Groundwater in the Duluth area is primarily derived from either unconsolidated glacial sediments or from bedrock of the Duluth Gabbro Complex. A discussion of both water sources is as follows:

5.3.1.1 Unconsolidated glacial sediments

The glacial sediments in the vicinity of the Duluth IAP consist primarily of ice-contact deposits that consist of clay with highly variable amounts of sand, silt, gravel and boulders. Recoverable amounts of water are largely dependant on the occurrence and thickness of coarser sediment layers within the clay-based matrix.

Water use within unconsolidated glacial sediments is only slightly developed and used primarily for domestic use in areas where the sediments are sufficiently thick to allow for well installation. Water yields are typically less than 10 gallons per minute (Olcott and others, 1978). The mean well depth is 45 feet and the depth to water was less than 30 feet in 93% of the wells.

5.3.1.2 Consolidated bedrock

Water use within the Duluth Gabbro has been only slightly developed due to relatively poor yielding wells (< 10 gallons per minute) (Olcott and others, 1978). The median depth of wells completed within the Duluth Gabbro was 145 ft (Olcott and others, 1978).

5.3.2 Surface Water

Surface water occupies the numerous lowlands surrounding the Site forming a network of moderate to large wetlands (Figure 1). Wetlands in the northern half of the Site drain into the Beaver River while wetlands in the southern half drain to Miller Creek. Surface water from the Site flows into two watersheds. Surface water from the northern portion of the Site flows north into Beaver Creek, which discharges into the Wild Rice Reservoir. The Wild Rice Reservoir eventually discharges into the Cloquet River, which in-turn discharges into the St. Louis River that drains into Lake Superior. Surface water from the southern portion of the Duluth IAP drains into Miller Creek, which discharges into Lake Superior. The numerous lowlands surrounding the Site form a network of moderate to large wetlands that likely contribute base flow to both the Beaver River and Miller Creek.

According to Engineering-Science (1982), five surface water monitoring stations (Stations 5, 6, 7, 8 and 9) were maintained at the Duluth IAP by Air Force personnel. Stations 5, 6 and 7 were located along the south side of the Site and monitor water quality in drainage ditches that discharge to Miller Creek. Stations 8 and 9 were located along the north side drainage ditches that discharge to Beaver Creek. Samples were periodically collected at each station beginning in 1975. The following is a discussion of water quality data (Engineering-Science, 1982):

- Ammonia, manganese, iron, copper and color levels at stations 8 and 9 typically exceed water quality standards. However, these parameters typically exceed water quality standards;
- Ammonia, manganese, iron, copper and color levels at stations 6 and 7 typically exceed water quality standards. Both stations are situated on a tributary of Miller Creek. Station 6 is located where the tributary enters the Site and Station 7 is located where the tributary exits the Site, indicating that the Site is not the cause of the exceedences;

- Slightly elevated phenol concentrations have been observed at stations 6, 7 and 9;
- Elevated oil and grease concentrations have been observed at stations 7 and 9.

According to Lt. Col Steve Wabrowetz the surface water monitoring program was discontinued when Air Force operations ceased. The only surface water monitoring being currently conducted is related to the Storm Water Pollution Prevention Plan.

5.3.3 Groundwater Flow Patterns

An illustration of regional groundwater flow was depicted in the Phase I – Records Search (Engineering-Science, 1982) and shows the Duluth IAP within a groundwater mound. Groundwater is depicted flowing primarily to the north on the northern half of the Duluth IAP and to the south on the southern half.

Site specific groundwater flow for Site 3, 4 and 8 was illustrated in a Remedial Investigation Report completed by Montgomery Watson, (1990). Groundwater flow with the CPA characterized by a groundwater mound centered over Site 8, with groundwater flowing to the south, west and northwest. The general flow direction for all the sites was to the south. The 1990 interpretation also indicates that the drainage ditches had a significant influence on groundwater. It is likely that groundwater flow, primarily in Site 8, has been significantly altered by the improvements completed by Cirrus. More recent groundwater flow data is not available since the Site 8 monitoring wells have been abandoned.

Groundwater flow information was obtained from the Annual Groundwater Sampling and Analysis Report for Sites 3 and 4 (Montgomery Watson, 2001). Groundwater is shown to flow uniformly towards the northeast across Sites 3 and 4, which is a direct contradiction of the 1990 data. The 2001 groundwater flow information is depicted on Figure 7.

5.3.4 Groundwater Receptor Survey

Well records were requested from the Minnesota Geological Survey for a one-mile radius around the Duluth IAP. An additional record search was conducted through a Digitized Well Location Points database obtained from the Minnesota Geological Survey's County Well Index (CWI) and last updated in July 2003. The MGS search resulted in two potable water wells and 104 monitoring wells. The CWI search indicated a total of 6 potable water wells. The potable water well, closest to the project areas is located approximately 11,000 feet to the north. The locations of all known potable water wells are shown on Figure 8.

5.3.5 State and Federal Database Search

5.3.5.1 General Findings

An EDR Report was obtained by EMR for site address 4973 Airport Rd. Duluth, MN 55811 (Target Property). The address is for Cirrus and corresponds to the CPA. EDR conducted an ASTM standard search of state and federal databases that are listed on pages 1-5 of the EDR report (Appendix A). The database search indicated the following types of sites and associated quantities within the search radius:

- The RCRIS database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous wastes as defined by RCRA. One RCRIS site was listed in this category. The responsible party is listed as Cirrus Design Corporation and 8 violations have been recorded. A compliance date for half of the violations was indicated.
- MPCA AST contains a listing of registered ASTs. Cirrus, MN ANG and Curtis Oil and Tire were the only AST owners listed.
- The MPCA UST database contains registered USTs. Two UST owners were listed; MN ANG and the Bureau of Prisons/Dept of Justice.
- The Minnesota List of Sites (MN LS) contains multiple databases including Solid Waste Facilities, Superfund Sites, No Further Action Planned sites and Voluntary Investigation and Cleanup sites. The Duluth IAP was the only party listed in MN LS. The Duluth IAP site was classified as voluntary clean up site. Further information can be found on page 44 of Appendix A.
- The MPCA LUST database contains an inventory of reported Leaking Underground Storage Tank (LUST) sites. Twenty LUST sites are listed in this database. A more extensive list with addresses can be found on page 3 of the executive summary in Appendix A.

Numerous databases were searched that did not reveal any mapped sites within the search radius (Page 1 and 2, Appendix A).

5.3.5.2 Site Specific Findings

The MN ANG was listed in the AST, UST and LUST databases and all sites were listed with an address of 4680 Viper Street. According to Lt. Colonel Steve Wabrowetz of the MNANG, all MNANG UST, AST and LUST sites are within the current base boundaries.

MN ANG was listed with a total of 29 USTs of which four are active. According to Lt. Colonel Steve Wabrowetz there are no active USTs within the MNANG boundaries, but there are active oil/water separators. The remaining 25 USTs have been either removed or abandoned. The AST database listed the MN ANG as the owner of 23 ASTs, 19 of which are active while 4 tanks have been removed. The LUST database listed 2 MN ANG sites both of which have been closed. Four additional closed sites were also listed on the LUST database. Further information regarding these sites can be found in Appendix A.

Cirrus, the current CPA tenant, was listed in the following databases:

- MN Enforcement Log listed Cirrus as having three Forgivable Adminstrative Penalty Orders, all of which had effective end dates no later than 2002.
- MN Spills listed Cirrus as having a release of some type. No details were given about the release date, released material or quantity.
- MN AST listed Cirrus as having one aviation gas AST.

There were no database listings for sites within the L3PA.

5.3.5.3 Orphaned Sites

There were 22 orphaned sites that were not mapped due to inadequate address information. Since the Duluth IAP, MN ANG or USAF are listed as responsible parties there is a potential that the sites are related to, or near, the Project Areas.

Responsible Party Listing	Database(s) Finds
Federal Prison	LUST
Duluth Airport Maintenance Shop	AST
FAA DMS SMO Duluth MBN ASR	RCRIS-SQG. FINDS
US Air Force Duluth ANG	TRIS
Duluth International Airport – BLO	MN VIC
Duluth International Airport – SIT	MN VIC

5.3.6 Potential Pathways

The following is a preliminary discussion of pathways and their potential for completion as an exposure route. This discussion focuses on the current project areas and takes into account current site conditions.

5.3.5.1 Air Pathway

The generation of fugitive dust is unlikely since the majority of both project areas are covered with impervious concrete, asphalt or structures. However, construction that would disrupt these surfaces could potentially complete this exposure route.

Exposure to soil vapors generated by contaminated soil and groundwater present at both sites is a potential exposure route. Volatile organic compounds, specifically vinyl chloride, cis-1, 2-dichloroethene, trichloroethene, benzene, trans-1,2 dichloroethene, and toluene have been detected in the soil and groundwater within the project areas. This pathway is largely incomplete since there are no known below grade structures in the contaminated areas. However it is possible that organic vapors could migrate through underground utilities or through higher conductivity utility trenches.

5.3.5.2 Surface Water Pathways

There are no surface water bodies in either of the project areas. The CPA formerly contained a drainage ditch that was apparently filled in during site improvements completed by Cirrus (Figure 6). A drainage ditch lies south of the CPA but the most recently reviewed data suggest that groundwater flows away from the ditch. Surface water sampling conducted in the southern drainage ditch did not detect any significant contamination (Engineering – Science, 1990).

5.3.5.3 Groundwater Pathway

Groundwater is contaminated at both project areas. However, a pathway for the ingestion of contaminated groundwater does not appear to be present since there are no potable water wells within 1 mile of the site (Figure 8). Underground utility and utility trenches pose a potential pathway for off-site migration of impacted groundwater.

5.3.5.4 Soil Pathway

Exposure to surface soil through incidental ingestion is highly unlikely since the majority of the project area surfaces are covered with impervious materials. Additionally, areas without impervious surface cover are generally covered with grass. Future construction in areas of contaminated could complete this pathway.

6.0 PROJECT SPECIFIC FINDINGS

6.1 Cirrus Project Area Findings

6.1.1 Project Overview

Two areas are planned for investigation under this FUDS contract. The first area is a narrow strip of land between the Cirrus Production Building and the POL Quonset hut (Figure 4). This investigation is being conducted in response to the discovery of tetrachloroethylene (PCE) and dichloroethylene (DCE) in a monitoring well adjacent to the POL Quonset hut that was previously believed to be unimpacted (Figure 2). The objective of the investigation is to determine if the chlorinated compounds are emanating from the CPA.

The second investigation area within the CPA is the area surrounding the former Building 112 and associated aviation fuel USTs (Figure 2). The investigation is being conducted in response to the discovery of petroleum and chlorinated compounds in the soil and groundwater near the location of the former USTs (Figure 2). The objective of the investigation is to determine the presence or absence of chemical contamination based on biased environmental sampling.

6.1.1.1 Project Location and Boundaries

The CPA measures approximately 795 feet (east to west) by 620 feet (north to south) and covers approximately 493,000 ft^2. The site is located in the SW ¼ of the SE ¼ of section 2, Township 50 North and Range 15 West. The southern edge of the project area borders Airport Road.

6.1.1.2 Current Site Improvements

The sole tenant of the CPA is Cirrus, who occupies Lot 1 of Block 5 and Lots 17 through 21 of Block 4 or the extents of the CPA (Figure 2). Currently there are two buildings present within the CPA and are as follows:

- Cirrus Production Building (Lots 19 and 21) – approximately 131,500 ft^2
- Cirrus Customer Service/Paint Shop Building (Lots 1 and 17) – approximately 63,500 ft^2

Lots 18, 20, the northern portion of Lot 17 and the southern portion of Lot 19 do not have any known improvements with the exception of asphalt and concrete surface cover. According to City of Duluth aerial photos Site improvements began prior to 1995 when a portion of the Cirrus Production Building was built. Between 1995 and 2002 the Production Building was expanded into Lot 21 and the former Paint Shop/Metal

Plating Building on the southeast corner of Lot 20 was demolished. The Cirrus Customer Service/Paint Shop building was constructed during 2002. All current facilities are connected to city utilities including sanitary sewer, gas and water services.

6.1.1.3 Current Uses of Property

The CPA property is used for the design, production and assembly of aircraft. The Cirrus Production Building houses the design, engineering and production facilities. The Cirrus Customer Service/Paint Shop Building houses customer service staff and airplane painting operations.

Lots 17 and 18 are currently used by Cirrus for temporary plane storage, and initial start-up and system testing operations. The southern portion of Lot 19 and Lot 20 are used for visitor and customer parking. Additional Cirrus employee parking is available off of the CPA property, south of Airport Road.

6.1.1.4 Current Uses of Adjoining Property

The properties on all sides of the CPA are developed to some degree and are discussed below.

The property bordering the north CPA boundary is owned by the City of Duluth and consists of tarmac, taxiways as well as the main east-west Duluth IAP runway. A large portion of the area north of the CPA, are unpaved buffer areas adjacent to the main runway. The property west of the CPA is owned by the City of Duluth and leased to the MN ANG. Improvements include the POL Quonset hut and adjacent concrete slab and a small office building. The POL Quonset hut is currently used for salt and sand storage and the office building houses MN ANG POL personnel. Approximately 700 feet west of the CPA are the two MN ANG aviation fuel ASTs and associated POL offloading and distribution facilities. The land immediately south of Airport Circle is primarily undeveloped but has been cleared and leveled to serve as parking for the Cirrus facility. Farther to the south is a residential housing development. The property east of the CPA is encompassed by the L3PA and is described in Section 6.2.1.

6.1.1.5 Drainage and Cover

The CPA was formerly vegetated with the exception of a few small structures that were historically present within the project area. A drainage ditch was also present in the northern one-third of the CPA. Currently, nearly 100% of the CPA surface is covered with impervious materials consisting of buildings, concrete or asphalt. It is assumed that the drainage ditch was filled in during the construction of the Cirrus improvements. Storm water from the Cirrus property is collected by a series of catch basins, but the discharge point of storm water is unknown.

6.1.2 Environmental Setting

The following is a discussion of the geologic and hydrogeologic conditions that are expected to be encountered within the project area. The following discussion was formed through the review of past work at the conducted at sites within and adjacent to the CPA.

6.1.2.1 Anticipated Geology

The matrix of unconsolidated glacial sediments are predominately clay based, but significant percentages of silt, sand and gravel has been observed within the clay matrix (Engineering-Science, 1990). The glacial sediments also contain distinct sand, silt and gravel horizons. Past investigations have also encountered boulders and bedrock fragments that were incorporated into the glacial sediments. Organic peat deposits were encountered between the ground surface and 10 feet bgs immediately west of the CPA and in borings south of Airport Road. Peat was also encountered in geotechnical borings completed in Lots 17 within the CPA and borings south of Airport Road. Depth to bedrock varies from about from 15 feet to 50 feet with the bedrock surface dipping to the southwest.

It is anticipated that improvements completed since the early 1990's have significantly altered the near surface sediments. It is likely that native soils have been removed and or non-native soils have been added throughout the project area. Site improvements have likely resulted in little or no soil changes below 6 feet bgs.

6.1.2.2 Anticipated Hydrogeology

The primary hydrogeologic unit beneath the CPA is the unconsolidated glacial sediments. The water table has been generally encountered at a depth of 10 feet or less and appears to be continuous with surface water features (Engineering-Science, 1990). Although geologic borings indicate that the aquifer is primarily unconfined, the heterogeneous nature of the unconsolidated glacial sediments suggests that the aquifer may be semi-confined or confined on a local scale. Based on groundwater level information the groundwater flow direction is nearly due south across the site and the gradient was approximately 0.017 with hydraulic conductivities ranging from 1.1 gal/day/ft^2 to 1.5 gal/day/ft^2 (Engineering-Science, 1990). Drainage ditches that lay west, north and south of the CPA, significantly influence local groundwater flow. The existence of the western and northern drainage ditches is not known and may have been altered or removed during project area improvements.

It is likely that CPA improvements (i.e. impervious surfaces) have significantly influenced the groundwater elevation and flow patterns

beneath the CPA. With this in mind the relevance of historical groundwater data needs to be considered.

6.1.3 Records Review

MN ANG, ACC, FUDs and other miscellaneous records were reviewed to evaluate former and active environmental site in the vicinity of the CPA and L3PA. The following discussion summarizes the results of the document review. A listing of all reviewed documents is found in Appendix C. The location of each of the following sites is shown on Figures 3 and 4.

6.1.3.1 MN ANG Sites Proximal to the Cirrus Project Area

The only known MN ANG project area within the CPA was formerly known as Site #8 and is a former DPDO Storage Area. Site #8 was investigated during a Remedial Investigation (RI) conducted by Engineering-Science in 1989. The results of the RI are discussed further in Section 6.1.5.1 and 6.1.5.2.

Site #4 is an active project area that lies immediately west of the CPA. Past and current investigations in Site #4 have focused on soil, groundwater and surface water contamination related to petroleum storage and distribution operations within the project area.

6.1.3.2 ACC Sites Proximal to the Cirrus Project Area

No ACC sites are present within, or adjacent to, the CPA.

6.1.3.3 FUDS Sites Proximal to the Cirrus Project Area

The only known former FUDS project within or adjacent the CPA is the Building 112 FUDS project. The Building 112 project consisted of the removal of two 55,000-gallon JP-4 (aviation fuel) USTs, associated pump house (Building 112) and associated underground piping. Contaminated soils were apparently removed during the UST removal, but the documentation related to the removed soil volume, soil disposition was not located. It is also not known whether clean limits were established during the project.

An additional UST (Lot #1 UST) was apparently removed in conjunction with the LOT 17 FUDS and is discussed in Section 6.2.3.3.

6.1.4 Historical Use Information

The following is a discussion of observations made during the review of aerial photos obtained from the City of Duluth Engineering Department for the years; 1964, 1971, 1979, 1988, 1995 and 2002 and photos from 1938, 1953, 1975, 1981, 1998 and 2003 obtained from Microdot, Inc. The reviewed City of Duluth photos were all scaled at 1 inch = 200 feet while the Microdot photos ranged from 1 inch

= 925 feet to 1 inch = 1,667 feet. Aerial photo interpretations were refined and confirmed through additional sources including historical USAF maps and personal interviews. Changes observed on adjacent land are briefly described with the exception of land to the east, which is described under the Lot 3 discussion (Section 6.2.4).

6.1.4.1 Aerial Photographs of Cirrus Project Area

1938 The earliest available aerial photo shows the CPA area as undeveloped (Figure 9). The extent of the CPA is vegetated with what appears to be agricultural fields. A single, east-west trending rectangular object is present in Lot 21 but its purpose is unknown. The Duluth IAP has not been developed although vegetation patterns indicate that a grass landing strip may be present northeast of the CPA. A building adjacent to the grass air-strip may be an aircraft hanger.

1953 By 1953 many of the current Duluth IAP features are present (Figure 10). However, Building 112 and the aviation fuel USTs (Lot 17) are the only recognizable features. The vegetation is disturbed in Lots 1 and 21 and what appears to be a soil pile is present in the in northeast corner of Lot 21 and the northern half of lot 19. A dark semi-circular object of unknown origin or purpose is present between Lots 1 and 17. One aviation fuel AST and a small structure is present in the POL area, west of the CPA.

1964 Lot 21 appears to have a faint rectangle in the southern portion of the lot (Figure 11). The rectangle may represent a former building slab. The Paint Shop (Building s114) is present in Lot 20 and Building 139 is visible in Lot 1. Building 112 and the associated aviation fuel USTs, a Quonset hut (west of Building 112) and Building 113 (south of the USTs) are also present. Tarmac with parked aircraft occupies the extents of Lot 18. Two rectangular structures are present in Lot 19 with what appears to be a material storage or salvage area. The materials are unidentifiable but are neatly arranged. Off-site changes include the construction of a Quonset hut (herein referred to as the POL Quonset Hut) immediately west of Lot 21. Several ancillary Quonset huts are present north and southwest of the POL Quonset hut (not visible on Figure 11). Beyond the POL Quonset hut are the three POL aviation fuel ASTs with an associated fuel unloading area and what appear to be a pump house. Southwest of the POL ASTs is the DRMO building and associated yard (not visible on Figure 11). Land north of the CPA is largely undeveloped with the exception of a taxiway and the main east-west runway. Land south of the CPA is undeveloped and wooded but an east-west trending drainage ditch is visible south of Airport Road.

1971 The Site appears relatively unchanged from 1964 with the exception of the addition of a second Quonset hut west of Building 112, and the absence of the two rectangular structures and adjacent materials that were visible in Lot 19 in 1964 (Figure 12). Several small rectangular objects (possibly trailers) are present in the southern portion of Lot 21. Notable off-site changes include the addition of an apparent cement slab immediately west of the POL Quonset hut and the removal of one of the three structures southwest of the POL Quonset hut (not visible in Figure 12).

1975 The most significant change to the site since the 1971 photo is the removal of two small Quonset huts that were located approximately 100 feet west of Building 112 (Figure 13). In addition, several rectangular objects of unknown origin are dispersed through the southern half of Lot 21.

1979 No changes were noted in the CPA between 1975 and 1979 (Figure 13). Off-site changes consist of the removal of a north-south trending structure southwest of the POL Quonset hut (not visible in Figure 14).

1981 The site remains relatively unchanged with the exception of the absence of the storage containers present in Lot 21 on the 1979 photo (Figure 15). In addition, three small structures north and south of the POL Quonset hut have been removed. Land south of the CPA now features a housing development.

April 1988 The CPA and adjacent areas is unchanged from the 1981 aerial photo (Figure 16).

April 1995 The most significant change between 1988 and 1995 is the construction of the first Cirrus Production Building on Lot 19 (Figure 17). Other site changes include the removal of Building 112 and associated USTs and the appearance area of a soil pile at the former location of Building 112 in Lot 17. According to Bob Dempsey, the soil pile is likely impacted soil that was excavated during the removal of Building 112 and the two 55,000-gallon USTs. The soil was treated with an ex-situ air sparging system and was later determined to be clean. Building 113 remains and is visible south of the soil pile. In addition, Building 139 has been removed from Lot 1 and has been replaced by an area of disturbed soil.

1998 The most significant change in the 1998 aerial photo is the outline of the Cirrus Production Building expansion into Lot 21 (Figure 18). Other changes include the removal of Building s114 that formerly occupied Lot

20 and the apparent removed of the soil pile near the former Building 112 area in Lot 17.

May 2002 The project area changed significantly between 1995 and 2002. The Cirrus production facility has been expanded to its current size with the addition of a 150,000 ft^2 building on Lot 21 (Figure 19). The 2002 photo also shows the construction of the Cirrus paint shop and office structure in Lot 1. Additionally, Building 113 has been removed. Off-site changes include the removal of one of the aviation fuel ASTs west of the CPA (not visible) and the clearing and leveling of a parking lot on the south side of Airport Drive.

2003 No changes were noted between the 2002 and 2003 aerial photos (Figure 20).

6.1.4.2 Former Sources at Cirrus Project Area

The following is a list of potential sources of environmental impacts. The potential sources consist of both previously identified and documented sources and new potential sources revealed during the development of this document. New potential sources were designated based on the documented or implied presence of petroleum products or chemical and the documented or implied activities or land use, but does not consider current land use. Identified potential former source locations within the CPA include (Figure 5a):

- Former DPDO (MN ANG Site #8, former S-1)
- Former Building 112 and associated aviation fuel USTs
- Former Lot 19 Salvage Yard (Salvage activities and materials)
- Former Building s114 (Paint Storage/Metal Plating Building)
- Former Building 139 (Fuel Oil Tanks)
- Former Building 113 (Solvent Storage)

6.1.4.3 Material Handling and Usage at Cirrus Project Area

Only minor documentation was found in relation to specific materials handled at specific facilities within the CPA. The following is a discussion of materials known or suspected to be in use in each of the potential sources (Figure 5a):

- Former DPDO – waste fuels and solvents, hydraulic fluid, pesticides, PCB containing transformers (known)
- Former Building 112 and associated USTs – aviation fuels (known)
- Former Lot 19 Salvage Yard – waste fuels and oils, metals, PCBs (suspected)

- Former Building s114 (Paint Storage/Metal Plating Building) – paints, solvents, acids, bases (suspected)
- Building 139 – fuel oil (known)
- Building 113 – solvents (known)

6.1.5 Current Conditions

6.1.5.1 Known Areas of Impacted Soil

A RI was conducted for ANG in Site 8 (former DPDO) as part of a larger investigation that also encompassed Sites 2, 3, 4 and 10 (Engineering-Science, 1990). The Site 8 investigation consisted of the collection of groundwater samples from temporary well points and monitoring wells, surface and subsurface soil samples. In addition, sediment and surface water samples were collected from the drainage ditch in the northern portions of the CPA. The Site #8 RI area is shown on Figure 4.

Results of RI concluded with the following soil conditions (Figure 21):

- Total petroleum hydrocarbons concentrations in excess of 100 mg/kg were discovered in two surface soil samples on the west side of Lot 21.
- 4,4'-DDT (1,500 mg/kg), 4,4'-DDD, 4,4'-DDE, dieldrin, and PCB 1254 were detected in the northwest corner of Lot 21.
- Total petroleum hydrocarbon concentrations exceeded 100 mg/kg in one sediment sample collected from a former drainage ditch in Lot 17.
- Barium, cadmium, chromium and lead concentrations in the soil marginally exceeded background levels for the airport

Figure 21 illustrates known areas of soil and groundwater impacted above standards.

A Feasibility Study (FS) conducted by Engineering-Science (1994) summarized the maximum soil contaminant concentrations at Site 8. The maximum concentrations of toluene and xylene at Site 8 were 1,400 mg/kg and 5.6 mg/kg, respectively. No other soil contaminants were listed.

Cirrus conducted an investigation in 2001 prior to construction of the Customer Service/Paint Shop Building during which several soil samples were collected. Fourteen soil samples were collected as part of the investigation analyzed for DRO, GRO, VOCs and PAHs. No analyte concentrations exceeded the applicable Minnesota Pollution Control Agency (MPCA) Tier II Soil Reference Values (SRVs). However, during the excavation of the foundation for the Customer Service/Paint Shop

Building a total of 1,091.13 tons of petroleum contaminated soils were removed and disposed. Two samples of the excavated soil contained DRO concentrations of 240 mg/kg and 660 mg/kg and GRO concentrations of 580 mg/kg and 2,600 mg/kg.

6.1.5.2 Known Areas of Impacted Groundwater

Past investigations conducted for various military organizations have indicated the presence of elevated concentrations of barium and chromium in the groundwater. The maximum concentrations for barium and chromium are 220 ug/L and 2.7 ug/L, respectively.

It should be noted that the majority of the groundwater data, applicable to the CPA, was collected from either the northern quarter of the CPA or south of Airport Road. Only limited groundwater data has been collected near the potential sources identified during this review.

An investigation conducted by Cirrus in 2001 indicated the presence of DRO and GRO concentrations in groundwater above the Minnesota Department of Health – Health Risk Limits (HRL). In addition, vinyl chloride was detected in groundwater samples collected from three borings in Lot 17 and one boring between Lot 1 and Lot 17 at concentrations that exceeded the HRL (Figure 21). The investigation was conducted in advance of the construction of the Cirrus Customer Service/Paint Shop Building.

6.1.5.3 Anticipated Contaminants of Concern

Based on a review of historical information, the following COCs have been identified for soil within the CPA:

- PCBs
- Pesticides
- Total Petroleum Hydrocarbons as Diesel Range Organics
- Total Petroleum Hydrocarbons as Gasoline Range Organics
- Polynuclear Aromatic Hydrocarbons
- RCRA Metals
- VOCs

Groundwater contamination has been identified within the CPA. The following COCs have a documented or potential presence within the CPA:

- VOCs
- Total Petroleum Hydrocarbons as Diesel Range Organics
- Total Petroleum Hydrocarbons as Gasoline Range Organics

- RCRA Metals
- Pesticides
- Anions/Cations
- RCRA Metals
- PCBs

6.2 Lot 3 Project Area Findings

6.2.1 Project Overview

The objectives of the L3PA investigation are to determine the presence or absence of chemical contamination. Chlorinated compounds were first detected in groundwater sampled as part of a LSI completed following the removal of a UST adjacent Building 103. A subsequent SI conducted in 2000 did not determine the source of the contamination or fully define the limits of impacted groundwater. However, the SI indicated that the concentration of chlorinated compounds increases to the east or in the direction of Hanger 101.

6.2.1.1 Project Location and Boundaries

The L3PA consists of Lots 2, 3, and 4 of Block 4 and is located in the SE ¼ of the SE ¼ of section 2, Township 50 North, Range 15 West. The L3PA measures approximately 936 feet (east to west) by 402 feet (north to south) and covers 376,000 square feet. The southern edge of the project area borders the north edge of Airport Road.

6.2.1.2 Current Site Improvements

Current improvements consist of two aircraft hangers and associated tarmac and are discussed below. Currently Lot 3 does not feature any known improvements but was the former location of Building 102, a former Air Force office building.

Building 101 was the first known structure constructed in the L3PA is situated in the southern half of Lot 2. Building 101 measures approximately 235 feet (measured east to west) by 150 feet (measured north to south) and was built as an aircraft hanger.

Building 103 was constructed between 1953 and 1964 and occupies roughly the southern half of Lot 4. The building was constructed as an aircraft hanger and measures approximately 240 feet (measured east to west) by 150 feet (measured north to south).

Site improvements in the northern half of the L3PA consist of concrete cover (tarmac) to facilitate the movement and occasional storage of aircraft.

6.2.1.3 Current Uses of Property

Building 101 is currently occupied by the Lake Superior Squadron 101 of the CAF and is used for storage, display and restoration of vintage aircraft and miscellaneous other military artifacts. A small military museum occupies the eastern portion of the building.

Building 103 is currently used by the MN ANG as an operational hanger. As of February 2004, flight operations were being moved to Building 103 in preparation of demolition of their current hanger. Prior to occupation Building 103 was used periodically by the U.S. Army for cold weather equipment testing.

6.2.1.4 Current Uses of Adjoining Property

Property on each side of the L3PA is developed to some degree. The following is a discussion of land use east, north and south of the L3PA. Land use to the west is encompassed by the Cirrus Project Area and is discussed in Section 6.1.5.

The land north of the L3PA is used primarily for private and corporate aircraft storage and maintenance. Tarmac surfaces are continuous between the L3PA and the northern hangers. Hermantown Hydraulics currently occupies the former Air Force Building s100 in Lot 1, which is due east of the L3PA. Hermantown Hydraulics sells and repairs hydraulic pumps, motors, cylinders, valves and hoses. A new hanger has been constructed north of the Hermantown Hydraulic building on Lot 1. The building had not been completed at the time of this writing but is owned by Jet Duluth. The proposed use of the hanger is unknown. Land use south of the Airport Road remains in use by the Bureau of Corrections and includes baseball diamond and a housing complex.

6.2.1.5 Drainage and Cover

Approximately 75% of the L3PA is covered with an impervious surface consisting of buildings, asphalt or concrete. The majority of the pervious surface cover is found in Lot 3 at the former location of Building 102. Based on a 1961 Air Force utility map, storm water from tarmac areas in L3PA and northward, are collected by a storm water system. In general, the storm water system, flows to the west to a point near Building 112 at which point the system turns to the northwest (Figure 6). The discharge point for the storm system is unknown but may be a tributary to Beaver Creek on the north side of the main runway.

6.2.2 Environmental Setting

The following discussion is based on the review of boring logs from a Site Investigation (SI) conducted by Montgomery Watson (2001) in relation to the discovery of groundwater impacted with chlorinated solvents.

6.2.2.1 Anticipated Lithology

The primary lithology encountered during the SI was a fine to medium grained, brown, silty sand that was typically encountered from the ground surface to depths ranging from 5 feet bgs to 16 feet bgs. The silty sand appears to be very homogenous with only minor variations in composition and texture being reported. It is suggested that this material is likely non-native fill imported during construction or demolition of the various improvements in the project area. No bedrock was encountered in any of the bore holes that ranged from 12 feet to 16 feet in depth.

6.2.2.2 Anticipated Hydrogeology

The only available hydrogeological information is water levels taken from temporary wells installed during the SI. Water levels ranged from 5 feet to 7 feet bgs with the deeper levels generally in the northeast portion of the investigation area. It is likely that the water levels have not been corrected for changes in ground surface elevation. The nearest surface water body is a drainage ditch that lies approximately 300 feet southwest of the southwestern corner of the L3PA boundary. It is possible that the drainage ditch may influence groundwater flow direction in the southwest corner of the L3PA boundary.

6.2.3 Records Review

The following is a discussion of known ANG, ACC, FUDS and LUST projects within, and adjacent to, the L3PA. Information about the former project areas was obtained through review of publicly available documents.

6.2.3.1 ANG Sites Proximal to the Lot 3 Project Area

The only known ANG site within the L3PA is the former Tank 036 site, which was removed under Installation Restoration Program (IRP). Contamination was discovered during the removal of Tank 036 in 1998 and a Limited Site Investigation was conducted. A water sample collected from a temporary well indicated the presence of cis- and trans-1, 2-dichloroethene. A Site Investigation was conducted in 2000 to determine the magnitude and extents of the chlorinated compound impacted groundwater. The limits and sources were not fully defined due to the limits of the project area. However, VOCs including TCE was encountered at concentrations up to 460 ug/L and increased in the direction of Hanger 101 (Montgomery Watson, 2001).

6.2.3.2 ACC Sites Proximal to the Lot 3 Project Area

No ACC sites were discovered during the file review process.

6.2.3.3 FUDS Sites Proximal to the Lot 3 Project Area

Two former FUDS Sites are within the boundaries of the L3PA. The former FUDS sites consist of removal of overhead steam lines and associated asbestos in 1997 and the demolition of Building 102 (Lot 3) in 1999.

A UST (Lot #1 UST on Figure 4) was apparently removed from an area northwest of the L3PA as part of the Building 112 FUDS project. The former UST was located approximately 30 feet south of Cleveland Street and 100 west of Stebner Road, northeast of the L3PA. No details of the UST or its removal were located during the review.

6.2.4 Historical Use Information

The following is a discussion of observations made during the review of aerial photos obtained from the City of Duluth Engineering Department for the years; 1964, 1971, 1979, 1988, 1995 and 2002 and photos from 1938, 1953, 1975, 1981, 1998 and 2003 obtained from Microdot, Inc. The L3PA consists of Lots 2, 3 and 4. Changes observed on adjacent land are briefly described with the exception of land to the west, which is described under the CPA discussion (Section 6.1.4).

6.2.4.1 Aerial Photographs of Lot 3 Project Area

1938 The earliest available aerial photo shows the L3PA area as undeveloped (Figure 9). The extent of the L3PA is vegetated with what appears to be a mixture of woodlands and grasslands. Immediately east of the L3PA is a lightly developed area that features roads but no visible structures.

1953 By 1953 Building 101 and Building 102 are present in the L3PA (Figure 10). No other improvements are visible in the Project Area. The northern half of the L3PA appears to have a mixture of soil cover and tarmac. Lot 4 is undeveloped and appears to be vegetated but two irregular mounds are present and may be soil piles related to construction activities in the area. Off-site structures include the construction of the flight simulator building (Building s100) east of the L3PA in Lot 1. Two rectangular fueling vaults are present immediately north of the flight line and taxiway, north of the L3PA. Numerous structures including barracks and the mess hall are present south of Airport Road.

1964 The most significant change to the L3PA is the addition of an aircraft hanger (Building 103) in Lot 4 (Figure 11). Additional tarmac has been added around Building 103 with some vegetated areas remaining around Building 102. Seven individual aircraft hangers have been constructed immediately north of the L3PA (Lots 9 through 15). An east-west trending Quonset hut has been constructed on Lot 1 north of Building s100.

1971 The general features of the L3PA are unchanged but minor additions have been completed on the west side of Building 103 and the northwest corner of building 102 (Figure 12). Offsite changes include the addition of a slender, north-south trending Quonset hut located west of Building s100.

1975 No changes were noted in the L3PA or adjacent areas between 1971 and 1975 (Figure 13).

1979 The L3PA and adjacent areas appear unchanged from the 1975 aerial photo (Figure 14).

1981 The L3PA and adjacent areas appear unchanged from the 1979 aerial photo (Figure 15).

April 1988 Although the L3PA appears unchanged, several changes were noted off-site (Figure 16). The most notable change is the removal of the barracks south of Building 101. In addition, the three western most hangers north of the L3PA have been removed.

April 1995 The L3PA appears unchanged and the only significant off-site change is the presence of a baseball diamond at the former barrack location south of Building 101 and the removal of a small building in the southwest corner of that block (Figure 17).

1998 The L3PA and adjacent area appear unchanged from the 1995 photo (Figure 18). The most notable off-site change is the apparent removal of the Jet Fueling Vaults at the north edge of the tarmac, north of the L3PA.

May 2002 Building 102 has been removed from Lot 3 and the surface restored (Figure 19). The overhead steam lines that parallel Airport Road have also been removed. Off-site changes include the removal of the north-south trending building in Lot 1 and the removal of the crash and rescue building (Building 303) due east of the northern hangers. The Jet Fueling Vaults are no longer visible and may have been removed.

2003 The site and adjacent area appear unchanged from the 2003 photo (Figure 20).

6.2.4.2 Former Sources at Lot 3 Project Area

The following is a list of potential sources of environmental impacts. The potential sources consist of both previously identified and documented sources and new potential sources revealed during the development of this document. New potential sources were designated based on the documented or implied presence of petroleum products or chemical and documented or implied activities or land use, but does not consider current land use. Additional discussions of these areas are found in Section 7.1 and are summarized in Table 10. Identified potential former source locations within the L3PA include:

- Building 101
- Building 103 Waterfall Paintbooth
- Tank 036 (Building 103)
- Lot 4 Hazardous Storage Area

6.2.4.3 Material Handling and Usage at Lot 3 Project Area

Only minor amounts of documentation were found in relation to specific materials handled at specific facilities within the L3PA. The following is a discussion of materials known or suspected to be in use at each of the potential source locations:

- Building 101 – solvents, virgin/waste/used fuels and oils (suspected).
- Building 103 Waterfall Paintbooth – paints, solvents (suspected)
- Tank 036 (Building 103) – fuel oil (known).
- Lot 4 Hazardous Storage Area – waste/used oil, fuel and solvents, pesticides, PCB containing solvents (suspected).

6.2.5 Current Conditions

6.2.5.1 Known Areas of Impacted Soil at the Lot 3 Project Area

Approximately 80 cubic yards of impacted soil were removed during the decommissioning of Tank 036 (fuel oil UST) and subsequently thermally treated. However, no soil analytical results were available for review from the UST removal or the subsequent Limited Site Investigation (LSI). Soil samples were collected from one boring during the SI and the results were non-detect for VOCs. The presence or limits of contaminated soil is unknown.

6.2.5.2 Known Areas of Impacted Groundwater at the Lot 3 Project Area

Groundwater exceeding HRLs was indicated in two of eleven locations sampled during the SI. The sample locations suggest that groundwater is impacted over an area measuring at least 120 feet (east to west) by 30 feet (Figure 21). However, the highest groundwater concentrations were detected at the eastern limit of the investigation boundary, in the direction of Hanger 101.

6.2.5.3 Anticipated Contaminants of Concern at the Lot 3 Project Area

Based on a review of historical information, the following soil COCs have been identified at the L3PA:

- Total Petroleum Hydrocarbons as Diesel Range Organics
- Total Petroleum Hydrocarbons as Gasoline Range Organics
- VOCs
- RCRA Metals
- Pesticides
- PCBs
- PAHs

Volatile organic compounds including cis-1, 2-dichloroethene, trichloroethene, benzene, trans-1,2 dichloroethene, toluene, vinyl chloride have been detected in the groundwater within the L3PA. Based on this information and the former presence of a water fall paint booth and a fuel oil UST the following groundwater COCs are suggested:

- Total Petroleum Hydrocarbons as Diesel Range Organics
- Volatile Organic Compounds
- RCRA Metals

7.0 RECOMMENDATIONS

7.1 Findings and Conclusion

The review of available documentation, aerial photos and personnel interviews has led to the discovery of several potential AOCs in addition to those proposed in the original scope of work. The additional AOCs are segregated below between AOCs *inside* the Project Areas and AOCs *outside* the Project Areas. Figures 5a and 5b shows the locations of these additional AOCs.

Additional AOCs Inside the Project Areas

- Former Paint Storage Building (Building s114)
- Lot 19 Salvage Yard
- Building 139 Fuel Oil Tanks
- Building 113 Solvent Storage
- Lot 4 Hazardous Storage Area

Additional AOCs Outside the Project Areas

- Southwest ACC Site S-1
- Lot 16 Aircraft Washrack
- Building s307 Fuel Oil Tank (Building s307).
- Lot 1 UST
- B E Maintenance Laboratory and Fuel Oil Tanks (Building 306)
- Rocket Check/Assembly/Storage Building (Building 305)
- Crash and Rescue Building (Building 303)
- Jet Fueling Vaults
- PME Laboratory (Building 304)
- Steam Generation Plant
- Building 302 Fuel Oil Tank
- Building 301 Fuel Oil Tank
- CAP Hanger Fuel Storage Area
- USAF Motor Pool Area
- Base Gas Station
- D-3 Goose Missile Dump Site
- D-5 East Goose Missile Dump Site
- D-7 C-ration Dump Site
- D-8 Hardfill Burn Area
- MD-1 Munitions Dump Site
- MD-2 Munitions Dump Site

The location, assumed chemical usage or storage and assumed activities for each potential site is discussed in Section 4.0 and summarized in Table 10. The location of each site is shown on Figures 5a and 5b.

7.2 Recommendations

The review of available documents related to the Cirrus Project Area and the Lot 3 Project Area indicate that impacted soils and groundwater remain. It is apparent that the impacts documented in both project areas have not been fully investigated or defined. Figure 21 illustrates the known areas of soil and groundwater impacts that exceed their respective soil or groundwater standards.

In addition to the primary project objectives, four additional AOCs were identified within the project areas (Table 10). A fifth AOC, an aircraft washrack, is adjacent to but outside of both project areas. The identified AOCs warrant investigation based on the identified or implied activities or chemical usage and storage. The following actions are recommended in addition to the original scope of work:

1) The CPA should be expanded to include Lots 15 and 16 to allow for complete investigation of the former aircraft washrack. If approved, the incorporation of Lots 15 and 16 into the project areas would require a modification to the scope of services.
2) Additional AOCs identified within the current project areas be investigated for the presence of impacts to soil and groundwater. It is anticipated that a minimum of 17 additional borings and 11 additional monitoring wells would be required to complete the evaluation. If additional sampling is approved a modification to the scope of services would be needed.
3) A total of 20 additional AOCs were identified outside the current project areas (Figures 5a and 5b). The information available for the majority of these AOCs was limited to a map reference or personnel interviews. Based on the lack of information related to these AOCs it is recommended that a FUDS Preliminary Assessment of Eligibility (PAE) be conducted to determine whether the additional AOCs are eligible for FUDS and further investigation.

A summary of AOCs, identified or implied features or functions and the recommended sampling parameters are found in Table 10.

8.0 Limitations

The data generated and conclusions provided are based upon the scope of work performed. All work was conducted in a manner consistent with customary principles in the fields of science and engineering. EMR is not responsible for the independent conclusions, opinions, or recommendations made by others based on the data presented in this report. No other warranty, expressed or implied, is made.

The results reported and any opinions reached by EMR are for the benefit of the client and unless agreed to by EMR in writing, are not to be disclosed to or relied upon by any third party. The results and opinions set forth by EMR in this report will be valid as of the date of the report. EMR assumes no obligation to advise you of any changes that may later be brought to our attention.

EMR, Inc., as environmental consultants, respectfully submits this report.

The preceding report was prepared and reviewed by the following EMR personnel.

Year	Activity
1927	The state legislature passed a bill for the issuance of city bonds to finance a Duluth municipal airport.
1929	The present site, then known as the Work Farm site, was chosen as the location for the airport. 640 acres of land were purchased by the City of Duluth from St. Louis County. Ground for the airport was broke by Mayor S. F. Snively on August 2nd.
1930	In September the airport was dedicated as a public airport and named the Williamson-Johnson Municipal Airport.
1931	A regular airmail route from St. Paul to Duluth was estabished by the U.S. Post Office.
1940	Northwest Airlines began the first regularly scheduled air service to Duluth.
Post WWII	U.S. Air Force constructed permanent and semi-permanent facilities on land leased from the City of Duluth.
1948	Minnesota Air National Guard built permanent facilities on the east end of the field. The 179th Fighter Squadron got governmental recognition in September. (In the future the USAF phased out its operations, but MNANG continued its operations.)
1949	The 179th Fighter Squadron moved its headquarters from the Duluth Armory to its current location on the northeast corner of the Airport.
1951	Duluth got a control tower. U.S. Air Force opened an interceptor base at the Wiliamson-Johnson Municipal Airport.
1954	The original terminal building was built.
1960	The 179th Fighter Squadron was renamed the 148th Fighter Group.
1963	The William-Johnson Municipal Airport was renamed the Duluth International Airport.
1974	A new Terminal Building and U.S. Customs, International Arrivals Building, were completed.
1994	Cirrus Design Corporation located their world headquarters at the Duluth International Airport and began the design, manufacture, and sale of their light aircraft.
1995	The 148th Fighter Group was renamed the 148th Fighter Wing.
1996	Northwest Airlines opened the maintenance facility on the north side of the airfield.
1989	The Terminal building and adjacent structures were connected. The original terminal building was then converted for use as offices for general aviation, the FAA, and the U.S. Weather Bureau.
1999	The 148th Fighter Wing began renovation of the base, to go from air-to-air missions to air-to-ground missions.
2002	Cirrus Design Corporation opened their new Customer Service and Paint Facility at the Duluth International Airport.
2003	The new Duluth Airport Authority "Hand W. Storms" Snow Removal and Equipment Maintenance Facility was opened.

ANG Compliance Activity
Site Research Report
Duluth IAP - FUDS E05MN0033
USACE, Omaha District
EMR Project # 6610

Activity	Status	Regulatory Program
Underground Storage Tank (UST) Management	The base has 3 sewage lift station USTs remaining in service.	Minnesota and Federal UST Programs
Oil/Water Separator (OWS) Management	9 OWSs are currently in use.	Clean Water Act (CWA)
Aboveground Storage Tank (AST) Management	18 ASTs are currently in use.	Minnesota RCRA Program and Federal Requirements
Hazardous Waste Management	Hazardous wastes are stored at 20 satellite accumulation points, at one 90-day hazardous waste storage area, and at 1 permitted hazardous waste storage facility.	Minnesota and Federal RCRA Programs
Polychlorinated Biphenyl (PCB) Management	The Base has 1 PCB storage area. All PCB transformer were replaced in 1996 with new non-PCB transformers.	Toxic Substances Control Act (TSCA), U.S. Environmental Protection Agency PCB policies, Minnesota PCB Rules
Asbestos Abatement	12 buildings (Buildings 126, 206, 211,214, 217, 218, 231, 243, 250, 303, 500, and 521) at the Base contain asbestos-containing material (ACM).	TSCA
National Pollutant Discharge Elimination System (NPDES) Permits	Semi-annual sampling and reporting are conducted for stormwater disharges from 12 outfalls. The Base has obtained permission from the Western Lake Superior Sanitary District to discharge stromwater from the dike surrounding the 2,500-gallon AST at the Hush House (Building 270 to the sanitary sewer.	NPDES Permit Program, CWA
Air Emissions Permits	The Base currently has no air permits. The Base applied for a State Synthetic Minor Source permit in 1996 and is awaiting MPCA review and approval.	Minnesota Pollution Control Agency guidance, Clean Air Act (CAA)

EMR Project # 6610

Investigation Area	Subdivision	Former Features/Activities	Proposed COCs	Reference
Cirrus Project Area (CPA)	Lots 19, 20, 21	Defense Property an Disposal Office (DPDO)	DRO, Metals, VOCs, Pesticides, PCBs	E-S, 1982
	Lot 17	(2) 55,000-gallon USTs, BLDG 112	DRO, VOCs	S-E-H, 1991
	Lot 20	*Former Paint Shop/Metal Plating*	VOCs, Metals, Acids, Bases	E-S, 1990
	Lot 19	*Salvage Yard*	DRO, GRO, VOCs, Metals, PAHs, PCBs	E-S, 1982
	Lot 1	*Building 139 - (3) 265 gal FO tanks*	DRO, BETX	DOA, 1961
	Lot 17	*Building 113 - Solvent storage and transfer*	VOCs	DOA, 1961
Lot 3 Project Area (L3PA)	Lot 2	BLDG 101 - aircraft maintenance	DRO, GRO, VOC, Metals	E-S, 1982
	Lot 3	BLDG 102 - primarily office space	DRO, GRO, VOC, Metals	E-S, 1982
	Lot 4	BLDG 103 - aircraft maintenance, paint booth, UST	DRO, GRO, VOC, Metals	E-S, 1982
	Lot 4	*Hazardous Storage Area*	VOCs, Pesticides, PCBs, Metals, PAHs	RDS Assoc.
Aircraft Washrack	Lot 16	*Aircraft Washrack - solvents used*	VOCs	DOA, 1961
Base Communications	BLDG s307	*265-gallon FO tank*	DRO, BTEX	DOA, 1961
Lot #1 UST	Lot 1	*Removed UST - Unknown contents/capacity*	DRO, GRO, VOCs	S-E-H, 1991
B E Maintenance Lab	BLDG 306	*Laboratory, (2) FO tanks*	VOCs, DRO, BTEX	DOA, 1961
Rocket Check/Assembly/Storage	BLDG 305	*Rocket propelled ordinance storage*	DRO, VOCs	DOA, 1961
Crash and Rescue Building	BLDG 303	*vehicle storage and chemical storage?*	DRO, GRO, VOCs	Pers. Comm.
Jet Fuel Vaults	North of L3PA	*2 underground aircraft fueling vaults*	DRO, VOCs	Pers. Comm.
PME Laboratory	BLDG 304	*Laboratory*	VOCs	RDS Assoc.
Steam Generation Plant	South of L3PA	*steam generation plant*	DRO, VOCs, PAHs	E-S, 1982
Water Pumping Station	BLGD 302	*250-gallon FO tank*	DRO, BTEX	DOA, 1961
BLDG 301	BLDG 301	*550-gallon FO tank*	DRO, BTEX	DOA, 1961
CAP Hanger Fuel Storage	West of BLDG 305	*(3) 22,000-gallon fuel storage*	DRO, GRO, VOC, RCRA Metals	DOA, 1961
USAF Motor Pool Area	SE of L3PA	*vehicle maintenance*	DRO, GRO, VOCs, Metals, PAHs	Pers. Comm.
Base Gas Station	South of L3PA	*USTs, dispenser lines and equipment*	DRO, GRO, VOCs	Pers. Comm.
Goose Missile Dump Site	Site D-3	*Empty Petroleum product barrels*	DRO, GRO, VOCs, PAH, Metals	E-S, 1982
East Goose Missile Dump Site	Site D-5	*Rubbish, oil cans, diesel engine filters*	DRO, GRO, VOCs, PAH, Metals	E-S, 1982
C-ration Dump Site	Site D-7	*C-ratios and hardfill*	VOCs, Metals	E-S, 1982
Hardfill Burn Area	Site D-8	*Scrap metal, construction debris, burnt refuse*	VOCs, PAH	E-S, 1982
Munitions Disposal Site	Site MD-1	*Disposal of munitions by demolition*	VOCs, PAH	E-S, 1982
Munitions Disposal Site	Site MD-2	*Disposal of munitions by demolition*	VOCs, PAH	E-S, 1982

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-00. Search distances are per ASTM standard or custom distances requested by the user.

TARGET PROPERTY INFORMATION

ADDRESS

4973 AIRPORT RD
DULUTH, MN 55811

COORDINATES

Latitude (North):	46.836900 - 46° 50' 12.8"
Longitude (West):	92.201300 - 92° 12' 4.7"
Universal Tranverse Mercator:	Zone 15
UTM X (Meters):	560907.9
UTM Y (Meters):	5187131.0
Elevation:	1413 ft. above sea level

USGS TOPOGRAPHIC MAP ASSOCIATED WITH TARGET PROPERTY

Target Property:	46092-G2 DULUTH HEIGHTS, MN
Source:	USGS 7.5 min quad index

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the ASTM E 1527-00 search radius around the target property for the following databases:

FEDERAL ASTM STANDARD

NPL..... National Priority List
Proposed NPL..... Proposed National Priority List Sites
CERCLIS..... Comprehensive Environmental Response, Compensation, and Liability Information System
CERC-NFRAP..... CERCLIS No Further Remedial Action Planned
CORRACTS..... Corrective Action Report

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

FEDERAL ASTM STANDARD

RCRIS: Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs): generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs): generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs): generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRIS-SQG list, as provided by EDR, and dated 01/12/2004 has revealed that there is 1 RCRIS-SQG site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Minnesota Pollution Control's Underground Storage Tank File.

A review of the UST list, as provided by EDR, and dated 09/11/2003 has revealed that there are 2 UST sites within approximately 0.25 miles of the target property.

Site 3 of 3 in cluster B

Relative:
Higher

Actual:
1414 ft.

RCRIS:
Owner: CURTIS FRED
(312) 555-1212
EPA ID: MND022763486

Contact: LOUIE GAUTHIER
(218) 729-8241

Classification: Small Quantity Generator
TSDF Activities: Not reported

Violation Status: Violations exist

Regulation Violated: Not reported
Area of Violation: GENERATOR-OTHER REQUIREMENTS
Date Violation Determined: 09/11/2001
Actual Date Achieved Compliance: Not reported

Enforcement Action: VIOLATION NOTICE (VN)
Enforcement Action Date: 09/17/2001
Penalty Type: Not reported

Regulation Violated: Not reported
Area of Violation: GENERATOR-OTHER REQUIREMENTS
Date Violation Determined: 09/11/2001
Actual Date Achieved Compliance: Not reported

Enforcement Action: VIOLATION NOTICE (VN)
Enforcement Action Date: 09/17/2001
Penalty Type: Not reported

CURTIS OIL AND TIRE (Continued) **1000413744**

Regulation Violated: Not reported
Area of Violation: GENERATOR-MANIFEST REQUIREMENTS
Date Violation Determined: 09/11/2001
Actual Date Achieved Compliance: Not reported

Enforcement Action: VIOLATION NOTICE (VN)
Enforcement Action Date: 09/17/2001
Penalty Type: Not reported

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List
Source: EPA
Telephone: N/A
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/21/03
Date Made Active at EDR: 12/08/03
Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 11/03/03
Elapsed ASTM days: 35
Date of Last EDR Contact: 11/03/03

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
Source: EPA
Telephone: 703-413-0223
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 11/17/03
Date Made Active at EDR: 02/02/04
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 12/22/03
Elapsed ASTM days: 42
Date of Last EDR Contact: 12/22/03

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned
Source: EPA
Telephone: 703-413-0223
As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

RCRIS: Resource Conservation and Recovery Information System
Source: EPA
Telephone: 800-424-9346
Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs): generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs): generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs): generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RMP: Risk Management Plans
Source: Environmental Protection Agency
Telephone: 202-564-8600
When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: PennWell Corporation
Telephone: (800) 823-6277
This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Telephone: 651-296-3971

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

GEOCHECK®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

DULUTH IAP
4973 AIRPORT RD
DULUTH, MN 55811

TARGET PROPERTY COORDINATES

Latitude (North):	46.836899 - 46° 50' 12.8"
Longitude (West):	92.201302 - 92° 12' 4.7"
Universal Tranverse Mercator:	Zone 15
UTM X (Meters):	560907.9
UTM Y (Meters):	5187131.0
Elevation:	1413 ft. above sea level

EDR's GeoCheck Physical Setting Source Addendum has been developed to assist the environmental professional with the collection of physical setting source information in accordance with ASTM 1527-00, Section 7.2.3. Section 7.2.3 requires that a current USGS 7.5 Minute Topographic Map (or equivalent, such as the USGS Digital Elevation Model) be reviewed. It also requires that one or more additional physical setting sources be sought when (1) conditions have been identified in which hazardous substances or petroleum products are likely to migrate to or from the property, and (2) more information than is provided in the current USGS 7.5 Minute Topographic Map (or equivalent) is generally obtained, pursuant to local good commercial or customary practice, to assess the impact of migration of recognized environmental conditions in connection with the property. Such additional physical setting sources generally include information about the topographic, hydrologic, hydrogeologic, and geologic characteristics of a site, and wells in the area.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata. EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

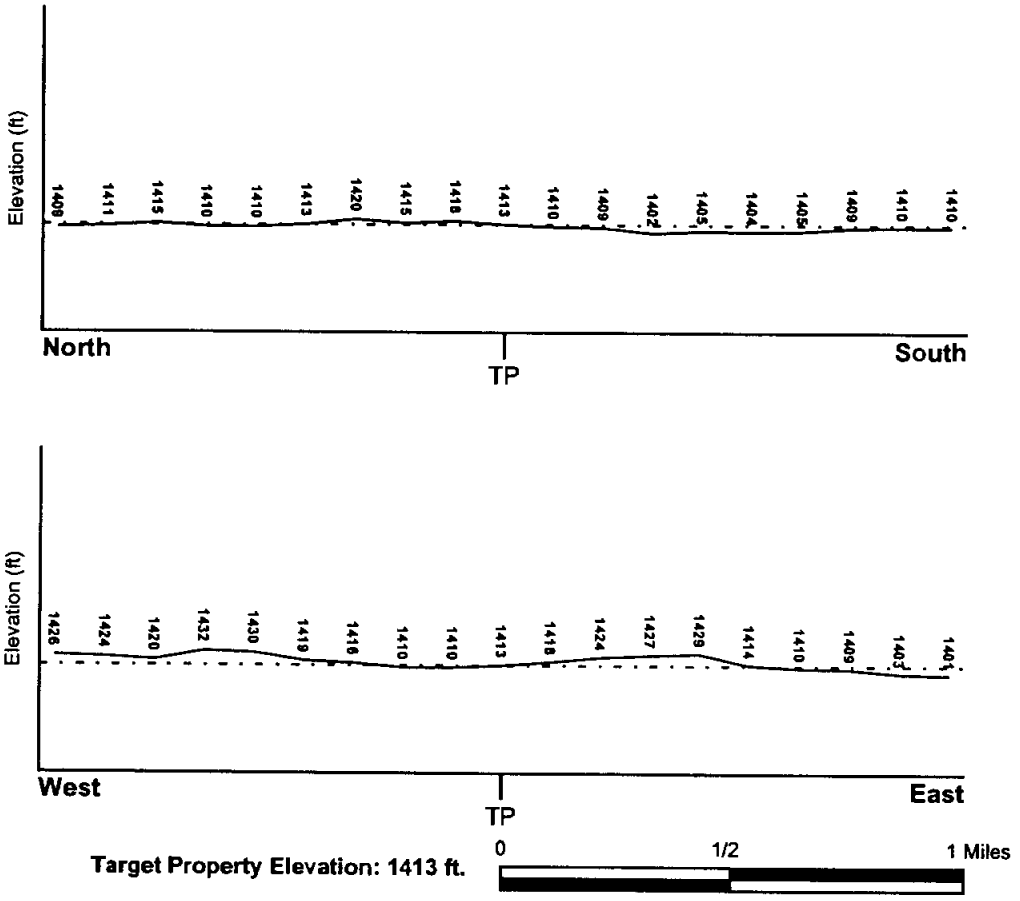
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

USGS Topographic Map:	46092-G2 DULUTH HEIGHTS, MN
General Topographic Gradient:	General WSW
Source:	USGS 7.5 min quad index

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
ST LOUIS, MN	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property:	2704210020B
Additional Panels in search area:	2707401600C 2707080003B 2707080006B

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
DULUTH HEIGHTS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Precambrian
System:	Precambrian
Series:	Mafic intrusives
Code:	Ymi *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Plutonic and Intrusive Rocks

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: AHMEEK

Soil Surface Texture: loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

Soil Layer Information

	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	2 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 2.00 Min: 0.60	Max: 6.00 Min: 4.50

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
2	2 inches	14 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 2.00 Min: 0.60	Max: 6.00 Min: 4.50
3	14 inches	33 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 0.20 Min: 0.00	Max: 6.50 Min: 5.10
4	33 inches	60 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 0.06 Min: 0.00	Max: 7.30 Min: 6.10

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: fine sandy loam
muck
sandy loam
loamy fine sand
silt loam
mucky-peat

Surficial Soil Types: fine sandy loam
muck
sandy loam
loamy fine sand
silt loam
mucky-peat

Shallow Soil Types: sandy loam
mucky - silt loam
loam

Deeper Soil Types: sandy loam
muck
loam
sand
gravelly - sandy loam
stratified
hemic material
mucky-peat

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

According to ASTM E 1527-00, Section 7.2.2, "one or more additional state or local sources of environmental records may be checked, in the discretion of the environmental professional, to enhance and supplement federal and state sources... Factors to consider in determining which local or additional state records, if any, should be checked include (1) whether they are reasonably ascertainable, (2) whether they are sufficiently useful, accurate, and complete in light of the objective of the records review (see 7.1.1), and (3) whether they are obtained, pursuant to local, good commercial or customary practice." One of the record sources listed in Section 7.2.2 is water well information. Water well information can be used to assist the environmental professional in assessing sources that may impact groundwater flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002. 7.5-Minute DEMs correspond to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

Appendix D
Summary of Personal Interviews

Mr. Tom Wilks
Retired USAF Photographer
Assigned to Duluth AFB: August 1955 to September 1958.

Notes:

Hanger 101 was used for plane maintenance including engine change outs, radar maintenance and change outs, and general maintenance. No knowledge of specific chemical usage or disposal practices. Major aircraft overhauls were completed in Utah.

Approximately 1,500 personnel on the AFB during the 1950s.

The black room was situated in the basement of one of the barracks located south of Hanger 101. Development and fixer chemicals were simply released into sink drains.

The paint shop building was used for paint storage and painting of smaller vehicles and components. Tom seems to remember the building being used by a metal plating company after the AFB closed.

Mentioned the presence of the Base Gas Station. The location of the gas station could not be pinpointed due to aerial photo coverage.

Mentioned the Rocket Storage Building but was unable to locate during interview due to aerial photo coverage. The location of the Rocket Storage Building was determined following the interview.

Was not aware of any other ordinance storage areas. Aircraft at that time were armed with only missiles.

Does not recall the DPDO in the CPA but seems to remember a scrap yard in that area.

An aircraft (apparently a B-47) crashed between the east end of the main east-west runway and Rice Lake Road.

Tom also identified several buildings on the aerial photos including: barracks, USO building, mess hall, steam plant, headquarters building, motor pool, and the flight simulator building.

Supplied EMR with two following aerial photos of the Building 102/102 area taken in either 1954 or 1955.

Tom mentioned Roger Coon as another person that served at the AFB during the late 1950's

Roger Coon
Retired 1st Sergeant in the 179th Fighter Squadron
Assigned to Duluth AFB: April 1956 to 1959.

Notes:
Worked in the print shop that was in the Flight Simulator Building.

Thought that there were a lot of solvents and other chemicals (oil, fuel) stored, at least temporarily in both Hanger 101 and 103. Most of the aircraft maintenance took place within the hangers.

Stated that the Paint Shop had a lot of yellow paint, since that was the color vehicles and other equipment were painted at the time. Personnel color coded the tails of the aircraft.

No other specifics on materials or handling practices within the Project Areas.

Thought that POL Quonset hut was used for sand and salt storage.

Recalled the presence of cement bunkers in the Cirrus area. Roger stated that they might have been taken out by the USAF.

Disposal practices seemed to be either flushing materials down the drain or pouring materials on the ground. Stated that personnel used to change the oil in their cars behind the HQ and the oil was left on the ground. Inks and water from publishing was flushed down drains.

He also recalled the airplane crash near Rice Lake Road, said that he witnessed the crash and fireball with other personnel.

Recalled a broken pipe between the POL and the Runway [maybe the piping between Building 112 and the Jet Fueling Vaults?]

Jim Holley
Program Manager – Air Combat Command April 23, 2004

Asked about ACC project areas and status and if there were any other sources for ACC information available beside the public record located at the Duluth Public Library.

Notes:
ACC has only had a total of six sites at the Duluth IAP.

ACC took responsibility for only five sites from the list of sites that was developed by the Phase I Records Search (Engineering-Science, 1982).

ACC took responsibility for one additional site – ST-12 RAPCON.

ST-12 RAPCON was discovered during line of sight clearing when a bulldozer uncovered two USTs.

Will send project summary and map for ST-12.

Said that I should contact Eric Evans of Hydrogeologic since Hydrogeologic recently completed an update of the ACC public record at the Duluth Public Library.

Said that all public ACC records are present in the Duluth Public Library – no other known sources for documentation.

[redacted]

Asked [redacted] about information on the Building 112 UST removal project, specifically if he had any documentation or knowledge of the Lot 1 UST removal.

He vaguely recalled the Lot 1 UST removal – thought it was either a diesel fuel or gasoline UST. Thought it was a clean removal since he doesn't recall the removal of any contaminated soil. Thought it was a fairly small UST.

He doesn't have any documentation related to the project – sent to Omaha when they took over the project.

Steve Lepella and Tim Musik were the MPCA contacts – documentation might be available through them.

Contaminated soils from the 55,000-gallon USTs were stockpiled and remediated through an ex-situ air sparging system installed into the stockpile. Soils were later determined to be clean (prior to Cirrus construction).

[redacted]
Environmental Engineer – Minnesota Air National Guard (April 24, 2004)

Asked about UST removal projects conducted by the MNANG.

All the MNANG UST removal projects that list 4860 Viper Street as an address were removed from the current MNANG base. They have not removed USTs in, or near our project areas. The MNANG does not have any more USTs at the Duluth IAP.

Asked if surface water monitoring that was conducted by the USAF continues.

The surface water sampling conducted by the USAF was discontinued (date unknown). The only surface water sampling that is currently conducted by the MNANG is related to the SWPP plan.

He cannot think of any potential FUDS sites.

[redacted]
Hydrologist – Minnesota Pollution Control Agency (April 23, 2004)

Asked about her general knowledge of Duluth IAP projects and if there were any outstanding work or areas that had not been investigated.

Notes:
Has not worked on Duluth IAP site for approximately 5 years.

Previously worked on the Imhoff Tank Site and other RCRA sites at the Duluth IAP.

Did not know anything about UST removal projects on the south side of the Duluth IAP.

Recalled that the MPCA had requested additional sediment sampling for metals in the marsh southeast of the former Imhoff Tank Site. Did not know if the sampling had ever been completed.

I. INTRODUCTION

The purpose of a Five-Year Review (FYR) is to evaluate the implementation and performance of remedies to determine if the remedies are and will continue to be protective of human health and the environment. The methods, findings, and conclusions of reviews are documented in FYR reports. In addition, FYR reports identify any issues found during the review and documents recommendations to address them. A summary of documents referenced during the preparation of this FYR can be found in **Appendix A**.

The Air National Guard (ANG) is preparing this FYR pursuant to the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Section 121, consistent with the National Oil and Hazardous Substance Contingency Plan (NCP) (40 Code of Federal Regulations [CFR] Section 300.430(f)(4)(ii)) and considering United States Environmental Protection Agency (USEPA) policy and FYR guidance (USEPA, 2001). This FYR was prepared utilizing the FYR recommended template provided by the USEPA Office of Land and Emergency Management 9200.0-89.

This FYR is being completed for nine Installation Restoration Program (IRP) sites located at the Duluth ANG Base (ANGB; hereinafter referred to as the "Base") in Duluth, Minnesota, as outlined below and indicated in **Table 1**.

This is the third FYR for the following IRP Sites:

- Former Defense Reutilization and Marketing Office (DRMO): SS003 (Site 3); and,
- Old Motor Pool Area: ST025 (Site 25).

This is the second FYR for the following IRP Sites:

- Fire Training Area (FTA) 1 and FTA 2: FT002 (Site 2);
- Fuel Storage Area: SS004 (Site 4);
- Imhoff Tank Treatment System: WP021 (Site 21);
- Aircraft Parking Ramp: SS023 (Site 23); and,
- Former Refueler Parking Area: SS029 (Site 29).

This is the first FYR for the following IRP Sites:

- Military Munitions Response Program (MMRP) Trap Range Site: TS737; and,
- MMRP Skeet Range Site: TS738.

In accordance with USEPA Guidance (USEPA, 2001), the triggering action for this statutory FYR is the signature date of the previous FYR Report, August 1, 2019 (BB&E, Inc. [BB&E], 2019), and the completion of a Record of Decision (ROD) for MMRP Sites TS737 and TS738 dated June 2018 (MMG-TLI JV/AECOM, 2018). This FYR has been prepared due to on-going remedial action at the sites. The on-going remedial actions were part of the selected remedies in the RODs for the sites. It is anticipated that upon completion of remedial actions, hazardous substances, pollutants, or contaminants at the sites will be at levels that allow for unlimited use and unrestricted exposure (UU/UE); however, the remedial actions have required five years or more to complete, and therefore the sites have been evaluated as part of this FYR.

The following sections discuss the background information for the Base and Sites 2, 3, 4, 21, 23, 25, 29, TS737, and TS738, including a general description of the property, the environmental setting, land use at the Base, and history of soil and groundwater contamination at the sites. Site figures are included in **Appendix B**. Although Site 2 and Site 23 have been approved for no further action (NFA) and Sites 3, 4, 21, 25, 29, TS737, and TS738 are undergoing long-term monitoring (LTM) and remedial activities, as noted above, conditions at the sites do not currently allow for UU/UE.

It should be noted that a base-wide Per- and Polyfluoroalkyl Substances (PFAS) Remedial Investigation (RI) is currently on-going at the Base. PFAS are discussed below in the Technical Assessment (Section V). As PFAS are emerging contaminants, they will be evaluated through a similar process used under the IRP and consistent with the provisions of CERCLA, as amended.

The team for this FYR was led by Ms. Celeste Holtz of BB&E. Participants included Mr. William Myer (Environmental Restoration Program Manager) of the Headquarters Air National Guard, Civil Engineering Directorate, Environmental Division, Restoration Branch (NGB/A4VR), Ms. Mikah Inkawhich (Federal Environmental Manager [EM] at the Base), SSgt Blake Bornholdt (State EM at the Base), Mr. Dan Cervin (Project Manager [PM] for the Minnesota Pollution Control Agency [MPCA]), and Mr. Mark Elliot (PM for MPCA).

Site Background

The Base, located at Duluth International Airport (DIA), is home to the 148th Fighter Wing (FW). The DIA is located in St. Louis County in northeastern Minnesota, approximately seven miles northwest of the City of Duluth (see Figure 1 in **Appendix B**). The City of Duluth owns the main east-west runway and supporting taxiways. Ownership of the remaining property at the DIA is divided among the Federal government, the State of Minnesota, and the City of Duluth. Commercial, industrial, residential, and recreational properties are located in the vicinity of the Base (Amec Foster Wheeler Environment & Infrastructure, Inc. [Amec], 2017a).

The DIA comprises approximately 2,000 acres, and the 148th FW facilities are located on leased property at several locations in the vicinity of the east-west runway (Amec, 2017a). The 148th FW main Base is located on the eastern side of DIA (see Figure 2 in **Appendix B**). It should be noted that portions of the Base fall on federally owned land, which is comprised of a total of approximately 18.84 acres.

The Duluth Air Force Base (AFB) was opened in 1948 as the Williamson-Johnson Airport and was operated jointly by the United States Air Force (USAF) Air Combat Command (ACC), the Minnesota ANG, and the City of Duluth. Duluth AFB hosted a variety of USAF operations until December 1981, when the USAF's operational missions were terminated at the Duluth AFB; however, commercial and ANG activities continued (ERM, 2013a).

The Base houses aircraft, vehicles, and equipment. Current and past operations at the Base have involved the use of products such as fuels, oils, lubricants, paints, paint thinners, solvents, and aqueous film forming foam (AFFF; Amec, 2017a). Figures showing the installation location and areas of Sites 2, 3, 4, 21, 23, 25, 29, TS737, and TS738 can be found in **Appendix B**. Supporting documentation for the sites can be found in **Appendix C** through **Appendix J**. Historical releases and potential impacts to the environment have been investigated through the IRP, as outlined below.

Site 2: FTA 1 and FTA 2

Site 2 is an area that encompasses approximately 30 acres (see Figure 3 in **Appendix B**). Site 2 was used twice per month from 1960 until 1987 to burn up to 500 gallons of jet propulsion fuel #4, along with smaller volumes of contaminated fuels and oils, paint thinners, and solvents for fire training activities (MWH Americas, Inc. [MWH], 2002). Fire training exercises, likely utilizing aqueous film forming foam (AFFF), led to the creation of site AT028, located within the footprint of Site 2, for the investigation of PFAS in soil and groundwater (HydroGeoLogic, Inc. [HydroGeoLogic], 2015). As such, details regarding PFAS within the footprint of Site 2 will not be discussed further in this FYR.

Site 3: Former DRMO

Site 3 is currently unoccupied and is the former location of a weapons calibration facility at Building 123 and, more recently, the DRMO. Site 3 is located near the southwest end of the runway. The site consists of four storage buildings, approximately 5 acres of paved storage areas, roadways, woodlands, grassy areas, and a network of drainage ditches (see Figure 4 in **Appendix B**). The DRMO was in use from 1965 until the early 2000s to store unused equipment and supplies, including petroleum, oils, lubricants, solvents, and various chemicals. At any one time, a maximum of one hundred 55-gallon drums were stored on a gravel storage pad located in the southwest corner of Site 3, where minor drum leaks occurred. The storage pad was used until 1980. No major spills have been recorded at Site 3; nevertheless, soil and shallow groundwater at Site 3 were impacted (BB&E, 2014).

Site 4: Fuel Storage Area

Site 4 was used as a petroleum, oil, and lubricants (POL) facility from 1950 to 2011. Decommissioning and demolition of the former POL facility was completed in March 2012 by Twin Ports Environmental/Construction LLC of Duluth, with oversight by EBI Consulting. Decommissioning and demolition activities included removal

of aboveground storage tanks (ASTs) and aboveground structures/ancillary equipment but did not include removal of any subsurface infrastructure or utilities. Site 4 is located on the southern side of the DIA and west of the Cirrus Aircraft manufacturing facility and is part of a parcel historically leased by the USAF on behalf of the State of Minnesota from the City of Duluth (see Figure 7 in **Appendix B**). Site 4 is separated from both DIA operations and the public roadway by permanent chain-link fencing, which provides engineering controls for the site (Amec, 2017b).

Site 21: Imhoff Tank Treatment System

Site 21 is a former treatment system that provided primary and secondary sewage treatment for the industrial and administrative areas of the Base. Site 21 is located in the central portion of the main Base and is located adjacent to Site 25 (see Figure 10 in **Appendix B**). The system was constructed in 1949 and consisted of an Imhoff tank, sludge drying beds, and biological filter bed. A 750-feet (ft) outfall pipe discharged the system's liquid effluent to the Miller Creek Wetlands. The City of Duluth connected the area to the municipal sewer in 1969. A Base Entrance Relocation Project was completed in 2005, which relocated the Base entrance road to cross Site 21 near its southern boundary (Amec, 2017a).

Site 21 is located South of the current Building 252 and where the former buildings 249 and 253 were demolished. Apparently, there were multiple small releases near Building 252 or a release of diluted dissolved-phase contamination from a stormwater outfall at the former Imhoff tank treatment system.

Site 23: Aircraft Parking Ramp

Site 23 is located along the northwest property boundary of the main Base and east of the northeast-southwest runway (see Figure 13 in **Appendix B**). Site 23 is located in the vicinity of Sites 25 and 26; Site 25 is located east of the northern portion of Site 23, and Site 26 is located west of the southern portion of Site 23. The aircraft parking ramp has been used for aircraft parking and refueling since 1948. Overfills and spills of aircraft fuel may have infiltrated the joints of the apron and taxiway and migrated into the soil and groundwater below. Site 23 was identified in 1990 during planning activities for the reconstruction of the aircraft parking apron and taxiway (Montgomery Watson, 2002).

Site 25: Old Motor Pool Area

Site 25 is located on the eastern portion of the DIA and near the current entrance to the Base (see Figure 15 in **Appendix B**). Site 25 includes former Building 239, and Buildings 240 and 242. Building 240 was originally the motor pool building, but has served as the Transportation Management Office, as well as the Base Supply Packing and Crating facility since the early 1990s. The site encompasses an area of approximately 1.2 acres that was used as the Base Motor Pool from 1948 until 1975. The site includes the old motor pool and two adjacent areas of related motor pool activities: 1) a former 1,000-gallon gasoline underground storage tank (UST) area and 2) the old motor pool floor drain outfall that flowed southeast from the old motor pool area. The 1,000-gallon gasoline UST was removed in September 1994. Two groundwater plumes have been identified at the site: a larger plume adjacent to the east and south of the former USTs and a smaller plume located south of the larger plume. Site 25 also includes the former sites of one 10,000-gallon gasoline UST, one 10,000-gallon diesel fuel 4 UST, and one 500-gallon waste solvent UST. These three tanks were removed in 1995 (EA Engineering, Science, and Technology, PLC [EA], 2015).

Site 29: Former Refueler Parking Area

Site 29 was last used as the administrative offices for POL Facility personnel (Building 117) and for parking tanker trucks used to fuel the aircraft at the Base (see Figure 19 in **Appendix B**). In the past, structures in the area of Site 29 included a former Quonset Hut (Building 68) used for storing paints, fertilizers, and cleaning solvents, and former Building 66, which had been equipped with a septic system and a fuel oil tank. It should be noted that Cirrus Aircraft, also on a lease with the Duluth Airport Authority (DAA), operates a manufacturing facility for small personal aircraft located immediately east of Site 29. Spills from cleaning solvents stored at the Quonset Hut, solvents inadvertently disposed of in the fuel oil tank near former Building 66, and an upgradient source beneath the Cirrus Facility are all potential sources of environmental impacts at Site 29 (Environmental Resources Management [ERM], 2015a).

Demolition and decommissioning of the former POL facility (Site 4) occurred in March 2012; however, no significant infrastructure was removed from Site 29. Site 29 was formerly located within the DIA secured perimeter fence. In January 2013, a new fence was constructed north of Site 29 that placed the Site outside the secured perimeter. However, engineering controls for the site are still intact, as the old fence and access gate remain in place (Amec, 2017c).

Site TS737: MMRP Trap Range Site

TS737 is located west of the Duluth ANGB installation boundary and north of the intersection of Runway 21 and Runway 13 on property owned by the DAA (see Figure 21 in **Appendix B**). The former range covers approximately four acres and was used by the 148th FW from 1985 to 1992. The Comprehensive Site Evaluation (CSE) Phase I report indicated use until 1999, whereas the CSE Phase II report indicated use until 1992. The CSE Phase I investigation indicated that this range was developed for use by the 148th FW and according to the ANG Real Property Manager for the 148th FW, the Minnesota Air National Guard (MNANG) has never held a lease or license for the Trap Range property. No other users of the former range other than the 148th FW were identified in previous investigations. This range was removed in 1999 as part of the Northwest Airlines Maintenance Facility construction project. No decommissioning efforts were completed prior to or during the construction project. The former range is accessible via a dirt access road through the off-base recycling facility. The terrain is mostly flat, with the center of the former range comprised of a low-lying marshland. Vegetation consists of tall grasses and densely wooded areas. Approximately half of the site is recognized as wetlands by the state but have not been formerly delineated as jurisdictional wetlands by the United States. Army Corps of Engineers (USACE). Therefore, no permit is needed under Section 401 of the Clean Water Act, but state wetlands requirements do apply. Two retention ponds are located near the Trap Range and are used for both storm water management and fire emergency water supply (URS Group Inc. [URS], 2007; MMG-TLI JV, 2016).

Site TS738: MMRP Skeet Range Site

TS738 is located within the Duluth ANGB installation boundary, on property owned by the Minnesota Department of Military Affairs, leased to the USAF, and licensed to the MNANG (see Figure 21 in **Appendix B**). A portion of the former firing fan extends across the installation boundary onto an adjacent parcel to the east also owned by the Minnesota Department of Military Affairs. The Skeet Range is approximately 15.3 acres and was used by the ANG from 1960 to 1970 for small arms (shotgun) training. The former range is mostly flat and bordered by buildings and associated parking areas in all directions. Buildings, roads, and parking areas also occur within the western side of the Skeet Range boundary. Surface waters on the site include a wetland, which drains into Miller Creek, a small pond/water feature, and a State designated trout stream (URS, 2007). The center of the former range (to the east of the Base buildings) is a low-lying, densely wooded wetland (MMG-TLI JV, 2016).

FIVE-YEAR REVIEW SUMMARY FORM

SITE IDENTIFICATION		
Site Name: 148th Fighter Wing, Duluth Air National Guard Base		
EPA ID: MND000773341		
Region: V	**State:** MN	**City/County:** Duluth/St. Louis County

SITE STATUS	
NPL Status: Non-NPL	
Multiple Operable Units (OUs)? No (Multiple Sites)	**Has the site achieved construction completion?** No

REVIEW STATUS
Lead agency: Other Federal Agency ***[If "Other Federal Agency", enter Agency name]*:** National Guard Bureau
Author name (Federal or State Project Manager): Celeste Holtz
Author affiliation: BB&E, Inc.
Review period: 2019 – 2024
Date of site inspection: 7/17/2024
Type of review: Statutory
Review number: 3
Triggering action date: 08/01/2019
Due date *(five years after triggering action date)*: 08/01/2024

II. RESPONSE ACTION SUMMARY

Basis for Taking Action: Site 2

In March 1982, during a Phase I Records Search, Site 2 was identified as needing further investigation. A Phase II Confirmation/Quantification Study was conducted from 1982 to 1988. A 1990 RI indicated that benzene, toluene, ethylbenzene, and xylene (BTEX), and phenolics were detected in collected soil samples, and chlorinated volatile organic compounds (VOCs) including trans-1,2-dichloroethene (DCE) and trichloroethene (TCE) were detected in collected groundwater samples. The 1990 RI recommended a Feasibility Study (FS) be conducted. The FS was completed in October 1991 and recommended excavation and land farming of the contaminated soil at Site 2 (MWH, 2002).

Response Actions: Site 2

Soil excavations took place at Site 2 in October 1993 and July 1994, and the removed soil was treated using low temperature thermal treatment. The remedial alternative recommended for impacted groundwater was collection and treatment of the groundwater using ultraviolet photolysis and oxidation followed by a period of groundwater monitoring. In November 1995, an FS addendum was prepared addressing MPCA comments and re-evaluating alternatives by comparing the previous RI groundwater results with those from a subsequent groundwater monitoring event conducted in February 1995. The FS addendum recommended additional groundwater monitoring on a quarterly basis for two years. Following two years of additional groundwater monitoring, a Decision Document (DD) for Site 2 was prepared in 1997. The 1997 DD was rejected by the MPCA. As a result, an additional three years of groundwater monitoring were completed as part of the LTM activities at the site. During the LTM, no VOCs exceeding MPCA Health Risk Limits (HRLs) were detected in groundwater samples collected at Site 2 (MWH, 2002).

In May 2002, a DD was prepared and signed for Site 2 that outlined the selected remedy of NFA (MWH, 2002; **Appendix C**). The NFA determination outlined in the DD was based on continued industrial land use, and Land Use Controls (LUCs)/Institutional Controls (ICs) are in place at Site 2.

The NFA alternative for groundwater at this site includes the implementation of LUCs/ICs to maintain the industrial land use and control exposures to constituents remaining in place at the site. In the event this land should pass out of the control of the Department of Defense (DoD), CERCLA Section 120 (h) provisions will be implemented to ensure adequate LUCs/ICs are maintained.

Status of Implementation: Site 2

The selected remedy at Site 2 per the DD is NFA based on continued industrial land use. Because hazardous substances, pollutants, or contaminants remain on-site above levels that do not allow for a UU/UE scenario, general LUCs/ICs are in place and reviewed annually to maintain industrial land use. The annual LUCs/ICs checklist is included in **Appendix K**. The specific regulatory LUCs/ICs for Site 2 are summarized in **Table 2**.

LUCs/ICs Summary Table

Table 2: Summary of Planned and/or Implemented LUCs/ICs at Site 2

Media, engineered controls, and areas that do not support UU/UE based on current conditions	LUCs/ICs Needed (Y/N)?	LUCs/ICs Called for in the Decision Documents (Y/N)?	Impacted Parcel(s)	LUCs/ICs Objective	Title of LUCs/ICs Instrument Implemented and Date (or planned)
Groundwater	Yes	Yes	Site Boundary	Maintain current industrial land use and control exposures to constituents remaining in place at the site. In the event this land should pass out of the control of the DoD, CERCLA Section 120 (h) provisions will be implemented to ensure adequate LUCs/ICs are maintained.	NFA DD for Site 2, MWH, May 2002

Notes:
LUCs/ICs Checklists are utilized by the Base to verify implementation of LUCs/ICs.
CERCLA – Comprehensive Environmental Response, Compensation, and Liability Act
DD – Decision Document
DoD – Department of Defense
IC – Institutional Control
LUC – Land Use Control
NFA – No Further Action
UU/UE – unlimited use/unrestricted exposure

Basis for Taking Action: Site 3

Site 3 was identified in a Phase I Records search in 1982 as needing further investigation. A Phase II Confirmation/Quantification Study was subsequently completed. Stages 1 and 2 were conducted in 1983 and 1986, respectively, confirming that VOCs, pesticides, and metals were present in soil and groundwater beneath Site 3. An RI report was completed in January 1990 and indicated that VOCs and chromium were detected in the soil and groundwater and recommended a FS be performed. The 1994 FS recommended excavation and land farming of the contaminated soil, collection of the contaminated groundwater using an interceptor trench, and treatment of the groundwater using ultraviolet photolysis and oxidation, followed by a period of groundwater monitoring. In 1995 an FS addendum recommended a groundwater interceptor trench for removal of contaminated groundwater, followed by carbon adsorption treatment, and groundwater monitoring (ERM, 2010).

In 1995 and 1996 most of the gravel storage pad was removed during soil excavation activities. Approximately 2,058 cubic yards (CY) of soil were removed from the area of the pad to a depth of approximately 10 ft below ground surface (bgs) and from the adjacent drainage network to a depth of one to 10 ft bgs. Excavated areas were backfilled with clean fill material. Based on the confirmation soil sampling results from the original excavation areas, the MPCA issued an NFA memorandum for Site 3 soils on 4 May 2000, approving the soil sampling results and stating that no additional remedial action (RA) for soils was necessary (BB&E, 2014).

A 1996 DD was approved by the ANG and MPCA to conduct quarterly groundwater monitoring at Site 3 for a period of three years. This DD stipulated that if COCs are migrating off-site and are impacting human health and/or the environment at concentrations exceeding HRLs, groundwater remediation may be necessary. The quarterly

groundwater sampling was conducted from 2000 through 2003, and the monitoring data indicated that the COC plume was not migrating off-site; however, it was persistent at concentrations exceeding HRLs. A follow up Data Gap Investigation (DGI) was conducted from March 2005 to October 2006. The DGI identified TCE, 1,1-dichloroethane (DCA), tetrachloroethene (PCE), and vinyl chloride (VC) as the primary COCs at the site and determined that the characterization of groundwater impacts was sufficient to proceed with the design and implementation of remedial actions. Following completion of bench and field scale pilot testing, a Proposed Plan (PP) was developed in 2008 to present the selected remedy for Site 3 (ERM, 2010).

Response Actions: Site 3

The ROD for Site 3 was developed in 2010 and indicated that based on the results of the field scale pilot test at Site 3, full scale implementation of enhanced in-situ bioremediation (EISB) with emulsified edible oil (EEO) amendment would provide a complete RA for VOC-impacted groundwater at Site 3. Monitored natural attenuation (MNA) was indicated as a final polishing step, if necessary (ERM, 2010). Remedial Action Objectives (RAOs) developed for Site 3 groundwater are as follows:

- Remediate site groundwater to or below HRLs; and,
- Prevent COC-impacted groundwater exceeding HRLs from migrating from the site via the surface drainage network.

In 2009, a full-scale RA was implemented at Site 3. EISB with EEO was chosen as the RA for Site 3 to promote enhanced in situ biodegradation by reductive dechlorination of the chlorinated VOCs. A total of 24 injection points (IPs) were advanced within the two Site 3 plumes, with each point receiving approximately 170 to 930 gallons of EEO amendment or Newman Zone. A total of 18,190 gallons of amendment was injected in 2009. Following the initial RA in 2009, two rounds of supplemental injections were conducted in April 2015 to December 2016, and April to May 2019. Following completion of the last injection event in May 2019, Site 3 entered an LTM phase to assess plume stability and COC concentration changes in groundwater relative to the cleanup levels specified in the ROD (Jacobs, 2024).

Currently the Site 3 COCs are PCE, TCE, VC, and 1,1-DCE, with constituents of interest including 1,4-dioxane, cis-1,2-DCE, and toluene. Residual PCE, TCE, and VC are still present in groundwater at concentrations greater than their ROD cleanup levels. Increasing dissolved oxygen (DO) concentrations and oxidation-reduction potential (ORP) indicate that the deeply reducing conditions necessary to promote reductive dechlorination are waning; therefore, reductive dechlorination rates are expected to continue decreasing. Other natural attenuation processes such as advection, dispersion, dilution, and abiotic reduction might support further concentration declines. However, the rates of concentration change observed indicate that ROD cleanup levels will likely not be achieved in the near future (Jacobs, 2024).

Site 3 was included in the 2025 RPO (BB&E, 2025). The RPO addresses remedial progress, potential data gaps in the conceptual site model, and provides options for optimizing remedy completion. Options including continued LTM, risk-based closure, enhanced LTM, and enhanced LTM with the addition of EISB and enhanced reductive dechlorination (ERD) injections were evaluated. Options outlined in the RPO are being considered for implementation.

Status of Implementation: Site 3

Site 3 is currently undergoing LTM to track the progress toward achieving the RAOs. The LTM program consists of collecting groundwater samples semiannually at 18 monitoring wells and analyzing the samples for VOCs and 1,4-dioxane. Analytical data are used to determine if the site has met the criteria established for closure in accordance with the ROD.

Because hazardous substances, pollutants, or contaminants remain on-site above levels that allow for a UU/UE scenario, general LUCs/ICs are in place and reviewed annually to maintain industrial land use. The annual LUCs/ICs checklist is included in **Appendix K**.

Basis for Taking Action: Site 4

Site 4 was originally identified in a Phase I records search in March 1982 as needing further investigation. The Phase II Confirmation/Quantification Study, Stages 1 and 2 were conducted in 1983 and 1986, respectively. Following the Phase II, a RI was completed in 1988. The RI Report indicated that total petroleum hydrocarbons (TPH), oil, and metals were present in the soil, and metals were observed in groundwater. Light non-aqueous phase liquid (LNAPL) was observed on groundwater near the ASTs. Dissolved-phase VOCs were observed in shallow groundwater, approximately 5 to 6 ft bgs, over approximately 2.7 acres of the POL facility, apparently contained by the drainage ditches that likely act as a barrier to the shallow groundwater (Wood, 2021a).

An FS was completed in 1994 to evaluate alternatives for treating COCs in soil and sediment at multiple sites, including Site 4. In response to comments from the MPCA, an addendum was added to the FS in 1995 to re-evaluate the original alternatives and to develop, screen, and evaluate additional alternatives. Ultimately, excavation and bio-treatment were recommended for remediating the contaminated soil (Wood, 2021a).

Response Actions: Site 4

From 1995 to 1997, approximately 2,400 CY of readily accessible contaminated soil were excavated from near Site 4 ASTs, berms, and along the loop road and drainage ditches to a contracted depth of 5 ft bgs. This excavation work was not considered a complete soil remedy and confirmatory samples were not collected.

In June 2009, sulfate and nitrate amendments were utilized to facilitate EISB in groundwater and resulted in a 40 to 90 percent reduction in benzene concentrations.

A ROD was finalized in 2015 to document remedies at Site 4 that included multiphase extraction (MPE) in source areas where LNAPL and high concentrations of dissolved-phase VOCs were observed, and injection of a sulfate and nitrate amendment into the groundwater to facilitate EISB in areas of lower VOC concentrations (Wood, 2021a). The ROD indicated the COCs for Site 4 include benzene, 1,2-dichloropropane, ethylbenzene, naphthalene, isopropyl benzene, methylene chloride, and LNAPL.

The RAOs for Site 4 soils are as follows (ERM, 2015b):

- Remediate site soil to below applicable Soil Reference Values (SRVs);
- Achieve the acceptable risk levels for human exposure to site; and,
- Remove deactivated underground utilities, including fuel pipelines, within the footprint of the remedial action.

The RAOs for Site 4 groundwater were as follows:

- Remediate site groundwater to below Health-Base Values (HBV)/HRLs; and,
- Prevent COC-impacted groundwater exceeding HRLs from migrating off site via the surface drainage network.

An MPE system was operated as an interim and approved remedy, removing an estimated 6,836 pounds (lbs.) of hydrocarbon mass from August 2008 through December 2011. After a significant reduction in hydrocarbon recovery rates, the MPCA recommended shutdown of the MPE system at Site 4, consistent with the 2010 Remedial Process Optimization (RPO) Report, which also recommended no further capital expenditure on MPE and implementation of an excavation RA after deactivation and decommissioning (D&D) of the POL facility (Wood, 2021a). Following this recommendation, the MNANG proactively shut down and decommissioned the MPE system and associated extraction and monitoring wells to facilitate the POL D&D in March 2012.

In December 2012 and January 2013, a DGI was completed. The DGI was primarily conducted to support the remedial design and development of a RA Work Plan for Site 4. During the DGI, the extent of petroleum hydrocarbon impact in Site 4 soil and groundwater was delineated, encompassing approximately 2.7 acres associated with the groundwater plume. Based on the results of the DGI, prior historical data and discussions with the MPCA, COCs identified for the Site 4 soil and groundwater included benzene, 1,2-dichloropropane,

ethylbenzene, n-butyl benzene, n-propylbenzene, naphthalene, isopropyl benzene, methylene chloride, 1,2,4- and 1,3,5-trimethylbenzene (TMB), total xylenes, sec-butylbenzene, toluene, and TPH diesel range organics (DRO), and LNAPL (Wood, 2021a).

In 2014 and 2015, ERM conducted remedial action construction (RAC) activities at the Site. The RAC activities completed at Site 4 included:

- Source removal excavation of petroleum contaminated soils (PCS) to below the groundwater table;
- Removal of the MPE system, monitoring wells, and underground infrastructure within the footprint of the excavation;
- Segregation of PCS and excavated soil appropriate to be backfilled;
- Sidewall soil sampling to confirm that the horizontal extent of soil impacts had been defined;
- Mixing ORC® or other equivalent into the excavation base below the water table to treat residual soil impacts and minimize potential rebound of COCs in groundwater;
- Backfill of the excavation with the segregated clean soil, aeration-treated soil, and additional imported clean soil;
- Construction of nine biopiles (Biopile 1 through Biopile 9) over the footprint of the excavation to compost the PCS; and
- Installation of groundwater monitoring wells in and around the excavation footprint to monitor groundwater.

A pre-characterization investigation was conducted to provide additional site information and update the conceptual site model (CSM). Analytical data was used to define groundwater treatment areas (TAs) for in-situ injections and identify the hot spot locations for soil excavation. In 2016 and 2017, RA operation (RA-O) activities were conducted at Site 4, including biopile deconstruction, hot spot soil excavation and remedial in-situ injections. Biopile excavation and deconstruction was performed on 22 August through 8 September 2017. Upon completion of the biopile deconstruction and grading, 25 soil confirmation samples were collected from a site-wide gridded area (Wood, 2021a).

Remedial in-situ injections were conducted in 2017. Three TAs with groundwater COCs at concentrations above MDH criteria were identified, based on analytical results from pre-characterization groundwater sampling activities conducted in November 2016 as detailed in the Final Remedial Action Operations Work Plan (Amec Foster Wheeler, 2017b). The total amount of product injected into the subsurface at Site 4 included 99,400 lbs. of Persulfox® and 21,320 lbs. of ORC®. Persulfox® and ORC® were introduced into the subsurface via a total of 26,076 gallons of solution between the three TAs.

Based on analytical results of post-injection monitoring, RA-O activities appeared to be significantly reducing VOC concentrations as designed. As such, LTM activities were conducted to continue to monitor the effectiveness of the RA-O activities. Following the second LTM event, a Technical Memorandum was submitted to the MPCA detailing the proposed description of work for the additional round of injections (Wood, 2021a). The MPCA approved the additional injections, and the second round of remedial in-situ injections was conducted in September 2020. Two TAs were identified based upon analytical results from LTM Events #1 and #2 for further injections. The purpose of the second round of injections was to focus remedial activities in the vicinity of monitoring wells GW4-II and GW4-LL, where concentrations of VOCs were observed to have rebounded (Wood, 2021a).

The total amount of product injected into the subsurface at IRP Site 4 included 2,810 lbs. of Persulfox® and 760 lbs. of ORC-A®. Persulfox® and ORC-A® were introduced into the subsurface via a total of 2,390 gallons of solution between the two TAs (Wood, 2021a).

Site 4 was included in the 2025 RPO (BB&E, 2025). The RPO addresses remedial progress, potential data gaps in the conceptual site model, and provides options for optimizing remedy completion. Options including continued

LTM, risk-based closure, continued LTM and EISB injections, and continued LTM with the addition of soil excavation were evaluated. Options outlined in the RPO are being considered for implementation.

Status of Implementation: Site 4

Site 4 is currently undergoing LTM to track the progress toward achieving the RAOs. The LTM program consists of collecting groundwater samples semiannually at 12 monitoring wells at Site 4 and analyzing the samples for VOCs. Analytical data are used to determine if the site has met the criteria established for closure in accordance with the ROD (ERM, 2015b). Per the RA-O Work Plan, once monitoring wells reach four consecutive events without an exceedance, a request for NFA will be submitted to MPCA.

Because hazardous substances, pollutants, or contaminants remain on-site above levels that allow for a UU/UE scenario, general LUCs/ICs are in place and reviewed annually to maintain industrial land use. The annual LUCs/ICs checklist is included in **Appendix K**.

Basis for Taking Action: Site 21

Site 21 was identified in a Resource Conservation and Recovery Act (RCRA) Facility Assessment Sampling Visit Report completed in July 1988 as needing further investigation. A 1992 RCRA Facility Investigation included the installation of two piezometer wells, three monitoring wells, and the advancement of 10 soil borings. Laboratory analysis detected toluene, xylenes, phenanthrene, pyrene, lead, and TPH-DRO in soil samples. During the same investigation, TCE and lead were detected in groundwater (MWH, 2011).

During 2005 and 2006, seven additional groundwater monitoring wells were installed at Site 21 and soil and groundwater samples were collected. Results of soil sampling indicated no compounds were detected in soil at concentrations exceeding MPCA Tier 2 Industrial Soil Reference Values (ISRVs). Results of the groundwater sampling indicated dissolved benzene, TCE, PCE, and VC were the primary groundwater COCs at Site 21 (MWH, 2008).

An RI DGI was conducted from 2008 to 2009 to characterize and delineate groundwater contamination. During the 2008/2009 RI DGI, vertical aquifer sampling (VAS), soil borings with temporary well sampling, permanent monitoring well installation and sampling, and PushPoint groundwater or pore water sampling were conducted. Eighteen VAS locations, seven soil borings with temporary wells, and 18 permanent monitoring wells were sampled for VOCs, and select permanent wells were also sampled for metals and MNA parameters (MWH, 2010).

Based on the groundwater analytical results from the 2008/2009 RI DGI, a TCE source was not identified, only diffused dissolved phase TCE was identified. Based on TCE concentrations in groundwater, the TCE plume appeared to be bifurcated at the marsh boundary near the intersection of Mustang Drive and Perimeter Road. TCE was not detected within the marsh at concentrations greater than the applicable, relevant and appropriate requirements (ARARs) that were determined in the Final RI DGI/Treatability Study/Focused FS Work Plan (MWH, 2008). Chemical-specific ARARs used for groundwater sampling investigation at IRP Site 21 included State of Minnesota HRLs, Federal Maximum Contaminant Levels, and State of Minnesota Specific Standards of Quality and Purity for Class 2B waters of the State (MWH, 2011).

Response Actions: Site 21

Following the RI DGI, a ROD (MWH, 2011) was approved for Site 21. The ROD identified the COCs as TCE, VC, benzene, and 1,2,4-TMB. Based on the results of the Focused FS (FFS), a combination of phytoremediation and enhanced bioremediation, plus ICs were selected as the remedy for Site 21. Additionally, installing ORC® socks in monitoring well 021-029MW was proposed to address benzene and 1,2,4-TMB. The major components of the selected response action are as follows:

- Groundwater ICs (including posting warning signs) to deter unauthorized use of the Site 21, placing a land use restriction on the site in the Installation Master Use Plan, prohibiting the use of groundwater, and conducting FYRs until regulatory criteria are achieved.

- Enhanced anaerobic bioremediation for the accessible areas of the TCE plume where concentrations exceed the site-specific criterion of 5 micrograms per liter (µg/L).
- Phytoremediation at a 0.5-acre treatment area to treat groundwater at depths down to 15 ft bgs.
- Installing three new performance monitoring wells to monitor enhanced bioremediation and phytoremediation effectiveness.
- Annual groundwater monitoring for the 15 years (estimated duration) of the remedy.
- Installing ORC® socks in monitoring well 021-029MW to address benzene and 1,2,4-TMB concentrations greater than the Minnesota Department of Health (MDH) HRLs and the MPCA Groundwater Intrusion Screening Values.

Per the ROD, the RAOs for Site 21 are as follows:

- Prevent ingestion or contact with groundwater contaminated with dissolved chlorinated solvents and petroleum constituents under industrial scenarios;
- Reduce chlorinated solvent and petroleum contamination in groundwater to reach the HRLs; and,
- Achieve concentration of COCs in groundwater at the marsh boundary and groundwater associated with Site 21 that are protective of human health and the environment.

The ROD also set forth the site-specific cleanup criterion as the Long-Term RAO HRLs for each site COC. However, criteria for certain COCs have been revised after implementation of the ROD; specifically, the current MDH criterion for TCE is currently 0.4 µg/L and the MDH criterion at the time of the ROD was 5 µg/L. RAs will be considered complete when concentrations meet the criteria specified in the ROD (5 µg/L).

In August and October of 2013, an RA injection program was initiated at Site 21. A total of 11,487 gallons of 7.5 to 100 percent emulsified vegetable oil solution was injected into 315 IPs. A total of 65 IPs were bioaugmented with a one-liter dose of dechlorinating and halorespiring bacteria (KB-1®; ERM, 2015a).

A phytoremediation buffer consisting of 307 poplar and 256 willow trees was designed and installed at Site 21. A ditch trencher and an excavator were used to trench a total of 17 east-west trending rows to a depth of 8 ft bgs. A mixture of molasses and water was placed in the bottom of each trench to act as a carbon source for root development. Fertilizer and mulch were then mixed in the native soil and placed back into the trenches to further support tree growth. A total of nine sugar maples and 12 red maples were placed within and around phytoremediation buffer (ERM, 2015a).

Groundwater sampling events were conducted at Site 21 in 2014 and 2015 following injection activities. In 2015, a comparative analysis was completed of target analytes across the plume and showed that the average TCE concentration has been reduced, with subsequent increases in average concentrations of daughter products, as expected with reductive dechlorination. As TCE is expected to drive the groundwater cleanup effort at IRP Site 21, it was selected as the representative COC to illustrate performance as a percent reduction. After the initial remedial action, the average TCE concentration across the plume was reduced by approximately 54 percent toward the target TCE concentration of 5 µg/L when compared to baseline conditions (ERM, 2015a).

To gain a further understanding of site conditions, a Pre-Characterization Investigation (PCI) was conducted from 7 through 18 November 2016. The PCI involved the collection of 21 groundwater samples (one from each well), advancement of three soil borings (including collection of two samples from each boring location), and two sub-slab air samples collected from existing sample points in Building 252. The PCI indicated that groundwater concentrations continued to exceed MDH criteria, but the sub-slab soil vapor samples did not exhibit any concentrations of MPCA Intrusion Screening Values criteria.

Following the PCI activities, a RA-O Work Plan was prepared (Amec, 2017a). In-situ injection activities were conducted between 8 August and 7 September 2017. During the injection event, Persulfox®, 3-D Microemulsion,

and Bio-Dechlor INOCULUM Plus were introduced into the target groundwater remediation zone through a total of 120 total IPs in seven TAs (TA-1 through TA-7).

Once in-situ injection activities were concluded, performance groundwater monitoring activities were conducted. Based on analytical results, RA-O activities appeared to be reducing TCE concentrations, as designed. RA-O activities and results are summarized in the RA-O Summary Completion Report (Amec, 2019).

Site 21 was included in the 2025 RPO (BB&E, 2025). The RPO addresses remedial progress, potential data gaps in the conceptual site model, and provides options for optimizing remedy completion. Options including continued LTM, risk-based closure, and continued LTM with the addition of EISB and ERD injections were evaluated. Options outlined in the RPO are being considered for implementation.

Status of Implementation: Site 21

Site 21 is currently undergoing LTM to track the progress toward achieving the RAOs. The LTM program consists of collecting groundwater samples semiannually at 21 monitoring wells at Site 21 and analyzing the samples for VOCs. Analytical data is used to determine if the site has met the criteria established for closure in accordance with the ROD (MWH, 2011). Per the RA-O Work Plan, once monitoring wells reach four consecutive events without an exceedance, a request for NFA will be submitted to MPCA.

Because hazardous substances, pollutants, or contaminants remain on-site above levels that allow for a UU/UE scenario, general LUCs/ICs are in place and reviewed annually to maintain industrial land use. The annual LUCs/ICs checklist is included in **Appendix K**. The specific regulatory LUCs/ICs for Site 21 are summarized in **Table 3**, below

LUCs/ICs Summary Table

Table 3: Summary of Planned and/or Implemented LUCs/ICs at Site 21

Media, engineered controls, and areas that do not support UU/UE based on current conditions	LUCs/ICs Needed (Y/N)?	LUCs/ICs Called for in the Decision Documents (Y/N)?	Impacted Parcel(s)	LUCs/ICs Objective	Title of LUCs/ICs Instrument Implemented and Date (or planned)
Groundwater	Yes	Yes	Site Boundary	Prohibit the use of site groundwater until regulatory criteria are achieved. Including posting warning signs and a restriction on the Installation Master Use Plan.	ROD for IRP Site 21, MWH, December 2011

Notes:
LUCs/ICs Checklists are utilized by the Base to verify implementation of LUCs/ICs.
IC – Institutional Control
IRP – Installation Restoration Program
LUC – Land Use Control
ROD – Record of Decision
UU/UE – unlimited use/unrestricted exposure

Basis for Taking Action: Site 23

After Site 23 was identified during planning activities for the reconstruction of the aircraft parking apron, an investigation was conducted and documented in an Environmental Exploration Program Report that was completed in August 1990. A Preliminary Potential Corrective Action Design was completed in April 1991 and BTEX, as well as TPH, were reportedly detected in soil samples, and a subsequent removal action was completed at the site in September 1993. A No Further Remedial Action Planned (NFRAP) DD was submitted to the MPCA for their

approval in January 1998. The MPCA did not concur with the NFRAP DD and requested that two quarterly groundwater sampling events be conducted. These events were included in the base wide LTM project (MWH, 2002).

As part of the LTM program completed at Site 23, groundwater samples were collected from six monitoring wells during two sampling events and submitted for laboratory analysis of VOCs, TPH-gasoline range organics (GRO), and TPH-DRO. Several VOCs were detected in groundwater samples collected at Site 23; however, no contaminants were detected at concentrations exceeding MDH HRLs and the site was approved for NFA (MWH, 2002).

A base-wide Preliminary Assessment (PA) was conducted on 20 and 21 January 2015 to assess the potential presence of PFAS at the Base. The PA identified ten potential release locations (PRLs), all of which were recommended for NFA (HydroGeoLogic, Inc, 2015). NGB contracted BB&E to complete a review of the PFAS PA Report as documented in the Review Summary for PFAS PA Site Visit Report for Duluth, Minnesota – Revision 1 (BB&E, 2016). Four of the PFAS PRLs were recommended for further evaluation. One of those PRLs, PRL 11, shares a footprint and contaminant release mechanism with Site 23, and, during the follow-up Site Inspection (SI) conducted in 2018, PRL 11 was recommended for further investigation as part of an RI (AECOM, 2019).

Response Actions: Site 23

Following the NFA determination in 2002, SS023 was reopened following completion of the PFAS PA/SI. The PFAS RI at the Base is currently underway.

Status of Implementation: Site 23

The selected remedy at Site 23 per the DD is NFA based on continued industrial land use. Because hazardous substances, pollutants, or contaminants remain on-site above levels that do not allow for a UU/UE scenario, general LUCs/ICs are in place and reviewed annually to maintain industrial land use. The annual LUCs/ICs checklist is included in **Appendix K**. The specific regulatory LUCs/ICs for Site 23 are summarized in **Table 4**.

LUCs/ICs Summary Table

Table 4: Summary of Planned and/or Implemented LUCs/ICs at Site 23

Media, engineered controls, and areas that do not support UU/UE based on current conditions	LUCs/ICs Needed (Y/N)?	LUCs/ICs Called for in the Decision Documents (Y/N)?	Impacted Parcel(s)	LUCs/ICs Objective	Title of LUCs/ICs Instrument Implemented and Date (or planned)
Groundwater	Yes	Yes	Site Boundary	Maintain current industrial land use and control exposures to constituents remaining in place at the site. In the event this land should pass out of the control of the DoD, CERCLA Section 120 (h) provisions will be implemented to ensure adequate LUCs/ICs are maintained.	NFA DD, Montgomery Watson, January 2002

CERCLA – Comprehensive Environmental Response, Compensation, and Liability Act
DD – Decision Document
DoD – Department of Defense
IC – Institutional Control
LUC – Land Use Control
NFA – No Further Action
UU/UE – unlimited use/unrestricted exposure

Basis for Taking Action: Site 25

Site 25 was first identified during an August 1993 PA completed at the Base as needing further investigation. A SI was subsequently conducted and included soil and groundwater sampling for potential impacts. Analytical results indicated that hydrocarbon products, including BTEX, were present in soil and groundwater at Site 25. Based on the results of the previous investigations, a Corrective Measures Study (CMS) was performed at the site. The CMS recommended excavation with thermal treatment of soil and air sparging for groundwater treatment. Soil Vapor Extraction/Air Sparging and ORC® pilot tests were both performed in 1997 to evaluate groundwater treatment. Neither technology was determined to be feasible for the site. Approximately 50 CY of contaminated soils were excavated and thermally treated off-site in 1997 (EA, 2015).

PCS was encountered in 1998 during replacement of a sewer line in the area of the tanks that were removed in 1995. An Interim RA was conducted in the fall of 1999 in this same area. Approximately 3,262 CY of contaminated soils were removed to the depth of the groundwater table. Bottom and sidewall confirmation samples were collected from the excavated areas and analyzed for VOCs, TPH-DRO, and TPH-GRO. One soil sample indicated a detected concentration of TPH-DRO above MPCA soil cleanup criteria. No additional compounds or analytes were detected above MPCA soil cleanup criteria from the excavated areas and the excavation report recommended NFA for soils at Site 25. A RI was performed at Site 25 in 2000. VOCs and semi volatile organic compounds (SVOCs) were found at concentrations greater than the MDH groundwater HRLs. Groundwater monitoring continued at the site between 2000 and 2003 and a DGI was conducted in 2005 and 2006. The DGI identified benzene and ethylbenzene in groundwater as the primary COCs for the site. Based on the findings of the RI and DGI, a pilot test consisting of sulfate/nitrate reduction was conducted at the site in 2006/2007. The results of the pilot test were favorable, such

that implementation of a full-scale sulfate/nitrate amendment was selected as part of the groundwater remedy for the site (EA, 2015).

Response Actions: Site 25

In August of 2008, MPE was selected to recover free product in source areas, and it was successfully implemented at Site 25. Additionally, a primary and secondary target area was identified for EISB injection of a condensed sulfate-nitrate amendment for remediation of dissolved phase groundwater impacts. In June 2009, a total of 43 IPs were advanced at Site 25 with each point receiving approximately 846 – 1,143 gallons of the condensed sulfate-nitrate amendment. Benzene, ethylbenzene, and 1,2-DCA continued to be detected at concentrations greater than their respective MDH groundwater values and appeared to originate from the former UST area. As a result, the MPE system was expanded in June 2011 to include six new extraction wells (BB&E, 2014).

In 2010, a Final ROD for Site 25 was issued to document the final RA chosen to address groundwater impacts at Site 25. The ROD recommended a combination of remedial technologies for Site 25 including MPE for LNAPL recovery in the source area and sulfate/nitrate amendments for residual dissolved phase groundwater impacts in the areas outside of the MPE zone of influence. Additionally, the ROD stated that MNA as a final polishing step may be necessary (EA, 2015). COCs identified in the ROD include benzene and ethylbenzene. The RAOs for Site 25 are as follows:

- Remediate site groundwater to or below HRLs; and,
- Prevent impact or degradation of the downgradient wetland.

In 2013, a FYR/RPO was conducted at Site 25 to evaluate the status of the site (at that time), evaluate groundwater conditions and the effectiveness of the RAs being conducted, and assess potential new activities to move the site towards closure. The FYR/RPO Report concluded that the MPE remedy had performed as intended; concentrations of petroleum hydrocarbons measured in source area extractions wells had decreased since implementation of the MPE response action. As of 2012, approximately 1,171 pounds of petroleum hydrocarbons have been recovered by the MPE system since startup in August 2008. Additionally, the total hydrocarbon recovery rate increased seven-fold immediately after MPE system expansion in June 2011 (BB&E, 2014). However, the FYR/RPO Report noted that mass removal rates had become asymptotic, and expansion of the system was impractical. The document acknowledged that the ROD stipulated polishing steps of EISB and possibly MNA. Recommendations in the document included: removal of the existing MPE system, with the potential to use some of the existing wells as part of the EISB remedy; performance of a plume stability analysis to develop an EISB remedy; and design and implementation of the EISB remedy at the site (EA, 2015). Additionally, the FYR/RPO stated that although Site 25 appeared to have been adequately characterized southeast of Mustang Drive, there remained a concern that an area between Mustang Drive and Building 238 may be continuing to feed the groundwater impacts at Site 25 (BB&E, 2014).

In December 2013 the MPE system was permanently shut down in favor of completing polishing treatment utilizing EISB. The EISB remedy utilizing a sulfate/nitrate amendment performed in 2009 had been exhausted and was not capable of effectively remediating the impacts to groundwater within a reasonable timeframe. Based on the groundwater sampling events conducted at the site in October 2013 and April 2014, both TCE and benzene are present in site groundwater above MDH Groundwater Values. It was determined that a data gap existed at the site and additional delineation of the dissolved phase plume was necessary prior to completion of additional RA-O. As sulfate/nitrate amendment addition through EISB focuses on reduction of petroleum hydrocarbons, particularly polycyclic aromatic hydrocarbons, and not chlorinated solvents, a combination of technologies would be required to successfully reduce concentrations of both TCE and petroleum hydrocarbons to below applicable criteria (EA, 2015).

As outlined in the Final RA-O/LTM Work Plan (EA, 2015), DGI activities, including groundwater sampling, were recommended to address data gaps and to further refine the extent of groundwater impacts. Based on this data, modifications to the EISB implementation, including dosage, substrate mixture ratios, and locations of IPs for the second injections, were considered. Additionally, a remedy for TCE was not included in the ROD because at that time TCE was not identified as a COC (based on groundwater data collected up to that time). As such, filing a formal letter documenting the additional EISB amendments to treat TCE at Site 25 was required.

The following activities were completed as part of DGI and RA-O activities at Site 25 in 2015 and 2016 (EA, 2015):

- Installed 3 new monitoring wells and performed a DGI groundwater sampling event, including collection and analysis of samples from the new wells as well as 15 existing monitoring wells;
- Injected approximately 3,360 pounds of EHC-L® into the subsurface via six IPs;
- Injected approximately 25 gallons of Nutrisulfate™ into the subsurface via 34 IPs (diluted in-line with water; for approximately 500 - 1,110 gallons per IP); and,
- Performed the 1st, 2nd, and 3rd performance monitoring sampling events following the first injection at 45-, 90-, and 330-days post-injection.

As noted above, the 2013 RPO Report stated that although Site 25 appeared to have been adequately characterized southeast of Mustang Drive, there were concerns that an area between Mustang Drive and Building 238 may be continuing to feed the groundwater impacts at the Site (BB&E, 2014). Performance monitoring results from the most recent monitoring activities appear to have confirmed an additional source area near the top of the hill, which may not have been identified during operation of the duel-phase extraction system at the site. In summary, implementation of the remedy was initiated; however, results of post-injection monitoring indicated that concentrations of COCs in groundwater were much greater than observed prior to implementation of the remedy. A second injection event was deemed inappropriate at that time and was not conducted (EA, 2018). Additional SI activities were recommended to determine the extent of soil contamination and dissolved phase impacts in groundwater, to help shape future RA at the site.

To address the emerging contaminant 1,4-dioxane, a one-time sampling event was conducted in August 2016 at Site 25. The sampling event included collection of groundwater samples for analysis of 1,4-dioxane from existing pre-selected monitoring wells representative of the source of the previously assessed plume, downgradient of the previously assessed plume, and the downgradient limit of the previously assessed plume at Site 25. The analytical results indicated that 1,4-dioxane was not detected in any of the groundwater samples collected at Site 25 (EA, 2018).

In August 2016, additional groundwater monitoring and soil screening were conducted at the site. Additional impacts to soil, approximately 10 - 12 ft bgs, were encountered near the northeastern corner of Building 240. In September 2018, six groundwater monitoring wells were installed, and groundwater was sampled from 21 existing and six newly installed wells. Sixteen exploratory soil borings were advanced during this investigation, and soil samples were collected from 10 of the borings. Based on the results of the characterization activities, it was determined that residual soil contamination existed at the site, primarily located between 15.5 and 17 ft bgs and north and east of the northeastern corner of Building 240. In addition, the dissolved-phase plume located east of Buildings 238 and 240 was larger and demonstrated greater concentrations of COCs than was observed immediately following the shutdown of the MPE system in 2014 (EA, 2018). Given the status of the site, including the size of the impacted area and COC concentration within this area, it was recommended that the site move into LTM/MNA (EA, 2018). The Final Work Plan for conducting LTM/MNA for Site 25 (Leidos, 2020) was approved by MPCA in June 2020.

Site 25 was included in the 2025 RPO (BB&E, 2025). The RPO addresses remedial progress, potential data gaps in the conceptual site model, and provides options for optimizing remedy completion. Options including continued LTM, risk-based closure, and continued LTM with the addition of EISB injections and VI study were evaluated. Options outlined in the RPO are being considered for implementation.

Status of Implementation: Site 25

Site 25 is currently undergoing LTM to track the progress toward achieving the RAOs. The LTM program consists of collecting groundwater samples semiannually at 15 monitoring wells at Site 25 and analyzing the samples for VOCs, TPH-DRO, and MNA parameters. Analytical data is used to determine if the site has met the criteria established for closure in accordance with the ROD (Leidos, 2020).

Because hazardous substances, pollutants, or contaminants remain on-site above levels that allow for a UU/UE scenario, general LUCs/ICs are in place and reviewed annually to maintain industrial land use. The annual LUCs/ICs checklist is included in **Appendix K**.

Basis for Taking Action: Site 29

Site 29, Former Refueler Parking Area, was originally identified in a Phase I records search in March 1982 that recommended a Phase II investigation. Phase II Stages 1 and 2 were conducted in 1983 and 1986, respectively, with soil and groundwater samples collected. Based on impacts observed, a RI was conducted. The RI Report indicated that TPH, oil, and metals were present in the soil, and metals were observed in groundwater (Engineering-Science, 1990). LNAPL was observed in groundwater near the location where former ASTs were reportedly present. Dissolved-phase VOCs were observed in shallow groundwater (i.e., 5 to 6 ft bgs) over approximately 2.7 acres of the POL facility. The VOC footprint was reportedly observed to be confined by the drainage ditches, which appeared to act as a shallow groundwater barrier (ERM, 2012).

A FS was conducted to evaluate alternatives for treating COCs in soil, groundwater, surface water, and sediment at multiple sites, including Site 29. In response to comments from the MPCA, an addendum to the FS was prepared to re-evaluate the original alternatives and to develop, screen, and evaluate additional alternatives. Ultimately, bio-treatment was recommended for remediating the contaminated soil (Montgomery Watson, 1995).

In May 2005, an RI of a Quonset Hut area east of the former fueling pad was conducted on behalf of Cirrus Aircraft (herein referred to as the Cirrus RI; Short Elliot Hendricks, Inc. [SEH], 2005). The Cirrus RI was conducted in preparation of the DIA property lease transfer of a portion of the parcel to Cirrus in support of facility expansion. Groundwater samples were collected from existing monitoring wells, and soil and groundwater samples were collected from four Geoprobe® soil borings to assess the degree and extent of the chlorinated VOC plume. The Cirrus RI Report indicated that the small VOC plume resulted from past uses of the property and primarily impacted shallow groundwater. The Cirrus RI concluded that, although chlorinated VOCs in groundwater exceeded MDH HRLs, the extent of impact was limited and there were no significant receptors within one mile downgradient of Site 29 (SEH, 2005). The Cirrus RI recommended a monitoring program to verify the stability of the groundwater plume.

In 2006, after the Quonset Hut parcel was removed from the POL Facility lease and added to the Cirrus lease, the Quonset Hut study area was designated as area of concern (AOC)-C. The MPCA and MNANG agreed to a groundwater monitoring plan for AOC-C. The groundwater monitoring program for AOC-C (which became Site 29) was completed in December 2007. Groundwater monitoring indicated that the plume boundary appeared to be stable, limited in areal extent as previously defined, and natural attenuation by reductive dechlorination was occurring. Chlorinated VOCs detected in groundwater were consistent with the Cirrus RI, located south of the drainage ditch and downgradient from the former Quonset Hut. However, elevated concentrations of chlorinated VOCs at wells GW4-AA and GW4-BB indicated the presence of another chlorinated VOC “hot spot” located near the northern drainage ditch at concentrations of an order of magnitude higher than previously identified for AOC-C (ERM, 2008a). Therefore, in 2012, AOC-C was designated as Site 29.

On various utility maps, as recent as 1996, a suspected UST was noted in the area. The notes indicated the tank was a 265-gallon capacity steel fuel oil tank. A geophysical survey conducted at Site 29 indicated the possible presence of the UST, a suspected source of dissolved phase chlorinated VOCs in Site 29 groundwater. Therefore, from 2009 to 2011, an RI was conducted that included a geophysical survey, soil, soil gas, and groundwater sampling in the area of the reported UST suspected to be the source of groundwater impact. In addition to the review of existing utility maps and completion of a geophysical survey, investigation activities to locate the suspected UST included use of a magnetometer. However, after attempting to locate the UST through use of a magnetometer and completion of 32 excavation locations over an approximately 2,500-square ft area, a UST was never found. After consulting with the Base personnel and the MPCA, the project team concluded that the UST had already been removed, but not reported. The results of the RI suggested implementation of a RA was necessary to address groundwater impacts at Site 29 (ERM, 2012).

Response Actions: Site 29

Following the RI, a ROD (ERM, 2013a) was completed. The remedy chosen from the Final ROD for Site 29 was biological reductive dichlorination, with a five-year MNA program as a polishing step (ERM, 2013b). The ROD identified the primary COCs as TCE, cis-1,2-DCE, trans-1,2-DCE, and VC. The RAOs for Site 29 are as follows:

- Reduce COC concentrations in site groundwater to the promulgated HRLs;
- Prevent degradation of groundwater and surface water from off-site migration of contaminated groundwater; and,
- Comply with ANG policy to perform remedial actions in accordance with CERCLA.

Criteria for certain COCs have been revised after implementation of the ROD; specifically, the current MDH criterion for TCE is 0.4 µg/L and the MDH criterion at the time of the ROD was 5 µg/L. Remedial actions will be considered complete when concentrations meet the criteria specified in the ROD (5 µg/L). From July through October 2013, 4,015 gallons of emulsified vegetable oil were injected into the subsurface at 82 IPs to address COCs in groundwater to concentrations below MDH HRLs/HBVs/Risk Assessment Advice. Additionally, approximately 47 percent of IPs were augmented with dechlorinating and halorespiring bacteria (ERM, 2015a).

From June through November 2014, two rounds of groundwater sampling were conducted at Site 29. Although several monitoring wells continued to exhibit concentrations of TCE above applicable criterion, average concentrations of TCE in the groundwater plume had decreased by 98 percent when compared to 2009 RI conditions. The Final RAC and Performance Monitoring Report for Sites 21 and 29 (ERM, 2015a) concluded that concentrations of reductive dechlorination daughter products indicate that anaerobic degradation is occurring for target COCs.

To gain a thorough understanding of Site conditions, PCI activities were conducted from 8 through 15 November 2016. Data collected included a total of 14 groundwater samples (one from each existing monitoring well), four soil borings, and vertical aquifer samples at three locations. The data collected during the PCI were evaluated and used to augment existing previous data to prepare the RA-O WP (Amec, 2017c) for Site 29 and as a baseline to compare future remedial progress.

In-Situ remedial injection (ISRI) activities were conducted between 1 and 14 June 2018 (Wood, 2020). Wood conducted ISRIs of EHC®, Emulsified Lecithin Substrate (ELS), and SDC-9® Dehalococcoides to the estimated shallow and deep contaminant plumes identified during the PCI event. ISRIs were conducted to target Site 29 COCs (TCE and VC) exceeding site-specific cleanup criterion. Approximately 8,800 lbs. of EHC®, 1,840 lbs. of ELS, and 29 liters of SDC-9 bacteria were mixed with water to form a 9,817-gallon solution that was injected into the subsurface at Site 29. LTM for groundwater began after the 2018 injection activities.

Site 29 was included in the 2025 RPO (BB&E, 2025). The RPO addresses remedial progress, potential data gaps in the conceptual site model, and provides options for optimizing remedy completion. Options including continued LTM, risk-based closure, and continued LTM with the addition of EISB and ERD injections were evaluated. Options outlined in the RPO are being considered for implementation.

Status of Implementation: Site 29

Site 29 is currently undergoing LTM to track the progress toward achieving the RAOs. The LTM program consists of collecting groundwater samples semiannually at 15 monitoring wells at Site 29 and analyzing the samples for VOCs. Analytical data is used to determine if the site has met the criteria established for closure in accordance with the ROD (ERM, 2013a). Per the RA-O Work Plan, once monitoring wells reach four consecutive events without an exceedance, a request for NFA will be submitted to MPCA.

Because hazardous substances, pollutants, or contaminants remain on-site above levels that allow for a UU/UE scenario, general LUCs/ICs are in place and reviewed annually to maintain industrial land use. The annual LUCs/ICs checklist is included in **Appendix K**. The specific regulatory LUCs/ICs for Site 1 are summarized in **Table 5**.

LUCs/ICs Summary Table

Table 5: Summary of Planned and/or Implemented LUCs/ICs at Site 29

Media, engineered controls, and areas that do not support UU/UE based on current conditions	LUCs/ ICs Needed (Y/N)?	LUCs/ICs Called for in the Decision Document[1] (Y/N)?	Impacted Parcel(s)	LUCs/ICs Objective	Title of LUCs/ICs Instrument Implemented and Date (or planned)
Groundwater	Yes	Yes	Site Boundary	ICs, including construction controls and engineering controls, will be required until RAOs are achieved.	ROD for Site 29, ERM, May 2013

Notes:
LUCs/ICs Checklists are utilized by the Base to verify implementation of LUCs/ICs.
IC – institutional controls
LUC – land use control
RA-O – remedial action operations
ROD – record of decision
UU/UE – unlimited use/unrestricted exposure

Basis for Taking Action: TS737 and TS738

The USAF MMRP conducted a CSE Phase I in 2007, which identified and confirmed the presence of the two munition response sites. A subsequent CSE Phase II Investigation was conducted in 2008 at both sites with the goal of determining the presence or absence of munitions and explosives of concern and munitions constituent at the sites and recommending appropriate response actions based on the screening of collected data against applicable State and Federal standards. The CSE Phase II investigation consisted of surface soil screening using X-ray fluorescence detectors, surface and subsurface soil sampling, sediment sampling, and surface water sampling. All samples were analyzed for metals and polynuclear aromatic hydrocarbons (PAHs; MMG-TLI JV/AECOM, 2018).

The CSE Phase II investigation of the TS737 detected elevated concentrations of metals in surface soil, subsurface soil, sediment, and surface water. Concentrations of lead in surface and subsurface soil exceeded both the MPCA Tier I SRVs and Soil Leaching Values (MMG-TLI JV/AECOM, 2018).

During the CSE Phase II investigation of TS738, lead was detected at concentrations in excess of MPCA Tier I SRVs in subsurface soil and at concentrations in excess of the regional background level in surface and subsurface soil. Lead and PAHs were detected at concentrations in excess of screening levels in sediment, and lead was detected at concentrations in excess of screening levels in surface water (MMG-TLI JV/AECOM, 2018).

The CSE Phase II Final Report recommended that a RI be conducted to complete the characterization of the nature and extent of contamination of surface soil, subsurface soil, surface water, and sediment at both the Trap and Skeet Ranges (AECOM, 2010). The RI was completed in 2013, during which additional samples were collected and analyzed. The results defined the lateral and vertical extent of the metals contamination in soils, sediment, and surface water associated with TS737 and TS738. Following the RI, an FS was completed in 2015 and evaluated four remedial alternatives (MMG-TLI JV/AECOM, 2018).

Response Actions: Site TS737 and TS738

Per the 2018 ROD (MMG-TLI JV/AECOM, 2018) for TS737 and TS738, the RAOs developed for the sites include establishing an unrestricted residential exposure scenario and a remediation goal (RG) of 300 milligrams per kilogram (mg/kg) for lead in soil while preserving wetlands and ecological habitats to the greatest extent practical. The selected remedy to achieve the RAO at both sites is excavation with off-site disposal. The planned excavation activities at TS737 will be completed to 2.0 ft bgs over approximately 1.4 acres where lead concentrations exceeded

the RG of 300 mg/kg (an estimated 4,517 CY). Although concentrations of lead in soil at TS738 do not exceed unacceptable carcinogenic, non-carcinogenic risks, or blood lead target standards; "hot spots" were identified where lead concentrations exceeded the RG. At TS738, the excavation will be completed to a depth of up to 4.0 ft bgs at multiple "hot spot" areas totaling approximately 0.2 acres where lead concentrations exceeded the RG of 300 mg/kg (an estimated 645 CY). As of the writing of this FYR, excavation activities have not yet taken place.

Status of Implementation: Site TS737 and TS738

The selected remedy included in this FYR, based on the ROD, is excavation with off-site disposal. Because hazardous substances, pollutants, or contaminants remain on site above levels that allow for a UU/UE scenario, LUCs/ICs are in place. As of the writing of this FYR, excavation activities have not taken place.

Because hazardous substances, pollutants, or contaminants remain on-site above levels that allow for a UU/UE scenario, general LUCs/ICs are in place and reviewed annually to maintain industrial land use. The annual LUCs/ICs checklist is included in **Appendix K**.

III. PROGRESS SINCE THE LAST REVIEW

This is the first FYR for Sites TS737 and TS738; the second FYR for Sites 2, 4, 21, 23, and 29; and the third FYR for Sites 3 and 25. The ANG has implemented a formal process to inform and track Installation staff compliance with LUC/IC requirements. Part of this process includes an annual review checklist to ensure the appropriate LUCs/ICs are maintained and documented properly. This checklist includes regulatory required controls, as well as additional best management practices related to affected environmental media. A copy of the LUCs/ICs checklist for Duluth ANGB is attached as **Appendix K**.

This section includes the protectiveness determinations and statements from the previous FYR as well as the recommendations from the previous FYR and the current status of those recommendations. Additionally, since the last FYR, the ANG completed an RPO for Sites 3, 4, 21, 25 and 29 (BB&E, 2025). The RPO addresses remedial progress, potential data gaps in the conceptual site model, and provides options for optimizing remedy completion. Options outlined in the RPO are being considered for implementation.

Table 6: Protectiveness Determinations/Statements from the 2019 FYR

OU #	Protectiveness Determination	Protectiveness Statement
Site 2, Site 17, Site 20, Site 22, and Site 23	Protective	The remedies for Sites 2, 17, 20, 22, and 23 are protective of human health and the environment.
Sites 3, 4, 21, 25, and 29	Protective	The remedies for Sites 3, 4, 21, 25, and 29 are protective of human health and the environment.

Table 7: Status of Recommendations from the 2019 FYR

OU #	Issue	Recommendations	Current Status	Current Implementation Description
Sites 2 and 23	The anticipated future industrial land use is not expected to change, and as such, no changes to the current remedies are recommended or required.	It is recommended that Base Civil Engineering personnel continue to conduct inspections of the sites and review the LUCs/ICs at all closed sites on an annual basis, as requested by MPCA. The next time the Base Installation Development Plan (IDP) is updated, it is recommended that the update captures the sites which have LUCs/ICs in-place. Capturing LUCs/ICs in the base IDP is an effective way to document potential actions which may be necessary if land use or site conditions change.	Annual LUCs/ICs ongoing. The IDP has not been updated to include the LUCs/ICs; ensure the next IDP update includes LUCs/ICs.	ANG has implemented a formal LUCs checklist process to be followed at all applicable ANG Installations. The LUCs/ICs checklist can be found in **Appendix K**.

OU #	Issue	Recommendations	Current Status	Current Implementation Description
Sites 3, 4, 21, 25, and 29	TCE is a site COC for several active IRP sites as identified in the respective RODs for the sites. The current MPCA HRL for TCE is 0.4 ug/L; the HRL for TCE at the time of the DDs for the sites was 5 ug/L.	If TCE levels in groundwater still exceed the HRL promulgated criteria at the time on-going remedial actions are completed, additional response activities and/or LUCs/ICs may be warranted.	Ongoing review of TCE levels relative to the HRL criteria	RAs will be evaluated for achievement of HRL criteria
Sites 3, 4, 21, 25, and 29	The active IRP sites at the Base are located on land that is not owned by the DoD.	It is recommended that this FYR Report be provided to site property owners. If land restrictions are required at the time of site closure, then the landowners must be appropriately notified, and provisions must be in place to ensure the controls are maintained.	Notification ongoing	Existing property lease instruments cover environmental liability requirements
Sites 3, 4, 21, 25, and 29	The State of Minnesota is reviewing LUCs/ICs that are in place at the Base to determine if they meet state requirements.	If any of these achieve non-UU/UE site closure prior to the next FYR, it is recommended that the ANG work with MPCA to ensure adequate LUCs/ICs are in place, and that they meet State of Minnesota requirements.	Not applicable	If UU/UE is achieved, the approval will determine LUCs/ICs are not required. MPCA will continue to be involved in LUCs/ICs review
Site 3	Although LTM results from RA activities were positive, daughter products are lingering, and performance monitoring results indicated that the injected substrate has likely been depleted.	Prior to MNA and site close-out it appears that additional injections may be warranted to achieve site cleanup goals. Additionally, 1,4-dioxane does not appear to be fully delineated at the site, and therefore, may warrant further evaluation.	RPO conducted	RPO evaluated options to ensure cleanup goals are achieved. Options are being considered for implementation.
Site 4	At the time of writing this FYR report, LTM results following the most recent RA activities had not yet been finalized.	It is recommended that once the results of the LTM are received, the data be evaluated to determine whether the site meets the requirements for NFA, and if not, additional polishing events may be warranted to achieve site cleanup levels.	RPO conducted	RPO evaluated options to ensure cleanup goals are achieved. Options are being considered for implementation.

OU #	Issue	Recommendations	Current Status	Current Implementation Description
Site 21	At the time of writing this FYR report, LTM results following the most recent RA activities had not yet been finalized.	It is recommended that once the results of the LTM are received, the data be evaluated to determine whether the site meets the requirements for NFA, and if not, additional polishing events may be warranted to achieve site cleanup levels.	RPO conducted	RPO evaluated options to ensure cleanup goals are achieved. Options are being considered for implementation.
Site 23	At the time of the writing of this FYR, the final PFAS SI Report had not been completed for IRP Site 23.	If PFAS are detected at Site 23 at concentrations above applicable criteria, additional investigation will be recommended as part of an expanded SI or RI/FS. The presence of PFAS related to IRP Site 23 should be evaluated during the next FYR.	SI completed RI underway	PFAS related to Site 23 is being evaluated in current FYR
Site 25	Additional RA and site characterization activities indicated the presence of an additional source area near the top of the hill (near Building 240).	Additional site characterization activities are recommended to fully delineate the extents of the unidentified contamination. Once determined, additional RA activities will likely be necessary in order to achieve site cleanup goals.	RPO conducted	RPO evaluated options to ensure cleanup goals are achieved. Options are being considered for implementation.
Site 29	At the time of writing this FYR report, LTM results following the most recent RA activities had not yet been finalized.	It is recommended that once the results of the LTM are received, the data be evaluated to determine whether the site meets the requirements for NFA, and if not, additional polishing events may be warranted to achieve site cleanup levels. Once received, the data from the sub-surface vapor point (VP-1) should be evaluated to determine if there is a potential for vapor intrusion into the neighboring Cirrus building.	RPO conducted	RPO evaluated options to ensure cleanup goals are achieved. Options are being considered for implementation.

IV. FIVE-YEAR REVIEW PROCESS

Community Notification, Involvement, and Site Interviews

The Base has engaged in active community outreach in the past. A Community Relations Plan was initially prepared for the Base in 1996. PPs were prepared to document the rationale for the preferred remediation alternatives at Sites 3, 4, and 25 (ERM, 2008b), Site 21 (ANG, 2011), Site 29 (ANG, 2012), Site 4 (ANG, 2013b), and TS737 and TS738 (MMG-TLI JV, 2016). As part of the development of the PPs, the ANG solicited public comments on the PPs during public comment periods and provided opportunities for public meetings to discuss the PPs and preferred alternatives. Additionally, during the public comment period, the PPs and the Information Repositories for the Sites were made available to the public at the Duluth Public Library located at 520 W. Superior Street in Duluth, Minnesota. The public comment periods were as follows:

- Sites 3, 4, and 25 PP comment period began on 17 November 2008 and ran through 16 December 2008;
- Site 21 PP comment period began on 9 May 2011 and ran through 9 June 2011;
- Site 29 PP comment period began 9 April 2012 and ran through 9 May 2012;
- Site 4 Revised PP comment period began on 18 November 2013 and ran through 17 December 2013; and,
- Sites TS737 and TS738 PP comment period began on 5 December 2016 and ran through 3 January 2017.

No comments were received on the PPs during any of the public comment periods. Public meetings were also held following the closure of public comment periods. A public meeting was not held following the closure of the Sites TS737 and TS738 public comment period due to lack of interest from the public (MMG-TLI JV/AECOM, 2018).

In 2009, a Community Involvement Plan (CIP) was prepared for the Base (URS, 2009). As part of the development of the CIP, the ANG conducted 28 local community interviews. A second CIP was prepared for the Base in 2022 (Jacobs, 2022). As part of the development of the 2022 CIP, the ANG conducted 20 local community interviews. The public was notified of the availability of the CIPs and related documents on the Administrative Record, and it was indicated that documents requiring a public comment period should be provided to Duluth Public Library for convenient public access.

MCPA has been involved in serving the interest of the general public at these sites. As such, the ANG, as the lead agency, has determined that broader public participation is not required as part of this FYR and is not addressed further in this report. The ANG has established an Information Repository located at the Environmental Management Office of the 148th Wing at the Duluth ANGB, in Duluth, Minnesota. The complete Administrative Record can also be viewed online at https://ar.cce.af.mil/.

Data Review for Site 2

Based on the results of the 2000 Annual Report and 2001 Annual Report (Montgomery Watson, 2000 and 2001), no COCs at concentrations exceeding HRLs are present in the groundwater at Site 2. The groundwater at Site 2 does not pose an unacceptable threat to human health or the environment for the current restricted land use. The site currently meets all HRLs established for groundwater; therefore, no remediation activities are planned for groundwater at the site. The recommended alternative, No Action, for groundwater at this site includes implementation of LUCs/ICs to maintain the current land use and control exposures to constituents remaining in place at the site. Adequate LUCs/ICs are in place at Site 2. In the event this land should pass out of the control of the DoD, CERCLA Section 120 (h) provisions will be implemented to ensure adequate institutional controls are maintained. Supporting information for Site 2 can be found in **Appendix C**.

Data Review for Site 3

June 2024 LTM sampling indicates that residual PCE, TCE, and VC are still present in groundwater at concentrations greater than their ROD cleanup levels. Increasing DO and ORP indicate that the deeply reducing conditions necessary to promote reductive dechlorination are waning; therefore, reductive dechlorination rates are expected to continue decreasing (Jacobs, 2024). Results and data from the June 2024 LTM sampling can be found in **Appendix D**.

Data Review for Site 4

Following the 2017 and 2020 injection events, concentrations of COC in groundwater samples have seen a significant decrease since the November 2016 baseline sampling event. The latest analytical data from the April 2021 LTM event indicated concentrations of 1,2,4-TMB, benzene, naphthalene, and VC were detected in exceedance of applicable criteria (Wood, 2021a). Results and data from the April 2021 LTM event can be found in **Appendix E**. A new contract was recently awarded for continued LTM at Site.

Data Review for Site 21

Data from September 2020 indicated that TCE remains above site-specific criteria in the interior well network, as well as two wells outside the phytoremediation area, while VC is generally decreasing or stable. While slight increases of VC concentrations have been exhibited in some monitoring wells, the increases are expected as the parent product, TCE, degrades in the subsurface. Recorded ORP, DO concentrations, and pH values indicate slightly favorable conditions for continued reductive dechlorination (Wood, 2021a). Results and data from the September 2020 LTM sampling event can be found in **Appendix F**. A new contract was recently awarded for continued LTM at Site.

Data Review for Site 23

Based on the results of the 2000 Annual Report (Montgomery Watson, 2000), no COCs at concentrations exceeding HRLs are present in the groundwater at Site 23. The groundwater at Site 23 does not pose an unacceptable threat to human health or the environment for the current restricted land use. The site currently meets all HRLs established for groundwater. Therefore, no remediation activities are planned for groundwater at the site. The recommended alternative, No Action, for groundwater at this site includes implementation of ICs to maintain the current land use and control exposures to constituents remaining in place at the site. Adequate LUCs are in place. In the event this land should pass out of the control of the DoD, CERCLA Section 120 (h) provisions will be implemented to ensure adequate institutional controls are maintained.

Site 23 has been reopened for PFAS investigation due to having the same footprint and release mechanism as PRL 11. The reopened Site 23 is currently being investigated as part of a PFAS RI that is underway at the Base. PFAS results from the SI, as well as the original NFA concurrence, can be found in **Appendix G**.

Data Review for Site 25

Groundwater analytical results from the December 2023 semi-annual sampling event indicate concentrations of site COCs persist above criteria in 11 of the 15 wells that were sampled. Based on the analytical results from the downgradient wells, contaminant migration to the Miller Creek wetlands does not appear to be a concern. Benzene and ethylbenzene, the primary COCs, exceeded their respective MDH groundwater values in nine and five wells, respectively. The exceedances of the MDH groundwater values in December 2023 are similar to those that were detected during the previous semi-annual sampling events. The MNA parameter results combined with the DO and ORP results from December 2023 indicate mildly reducing conditions, which are conducive to degradation of petroleum hydrocarbons and chlorinated solvents remaining at Site 25 (Leidos, 2024). Results and data from the December 2023 LTM sampling event can be found in **Appendix H**. A new contract was recently awarded for continued LTM at Site.

Data Review for Site 29

Based on analytical results of September/October 2020 LTM sampling, concentrations of TCE are confined to a single area around monitoring well GW29-D located to the east of the Site on the Cirrus property. The persistence of TCE in monitoring well GW29-D indicates a potential continuing upgradient source from beneath the Cirrus Facility. VC concentrations on-site have generally decreased from the baseline sampling concentrations across the Site. Only monitoring wells GW29-A, GW29-B, and GW29-D indicated higher concentrations of VC compared to the 2016 baseline sampling. However, increases in VC concentrations are expected as the parent product (TCE) breaks down in the subsurface. Recorded ORP and pH values also indicate favorable conditions for reductive

dechlorination to continue. In addition, TCE and VC detections throughout the Site appeared to be generally stable and/or exhibit decreasing trends (Wood, 2021b). Results and data from the September/October 2020 LTM sampling event can be found in **Appendix I**. A new contract was recently awarded for continued LTM at Site.

Data Review for Site TS737

Analytical results from the 2013 RI indicated surface soil contamination above screening criteria is concentrated in an area of approximately 250 ft by 350 ft in the presumed target impact area. Subsurface soil contamination above screening criteria is limited to isolated hot spots within the presumed target impact area, with highest concentrations occurring between 6 and 12 inches. Lead was detected in subsurface soils at depths greater than 36 inches bgs in only one location. Sediment contamination above screening criteria is limited to the section of the stream that runs through the northeast of TS737, located within the presumed target area. Surface water contamination above screening criteria correlates with the location of sediment contamination. Groundwater samples did not contain elevated concentrations of sampled constituents above criteria. Site groundwater was assumed to potentially discharge to surface water and was therefore evaluated with surface water quality standards (MMG-TLI JV/AECOM, 2018). Results and data from the 2013 RI can be found in **Appendix J**. Contracting activities are in progress for executing the planned RA at site TS737.

Data Review for Site TS738

Analytical results from the 2013 RI indicated that surface soil contamination above screening criteria is limited to isolated hot spot areas. Subsurface soil contamination above screening criteria was limited to a single location in the 6 to 12 inches bgs depth interval that showed an exceedance of lead. Sediment contamination above screening criteria is limited to one of two small ponds/water features that showed limited exceedances of lead. Surface water contamination above screening criteria was detected at one location within both of the two small ponds/water features that showed exceedances of lead. Lead was detected above screening criteria in one temporary monitoring well at the south end of the former range, but the well is located cross gradient to groundwater flow at the range and therefore the exceedance was concluded to not be associated with impacts from TS738 (MMG-TLI JV/AECOM, 2018). Results and data from the 2013 RI can be found in **Appendix J**. Contracting activities are in progress for executing the planned RA at site TS737.

Site Inspection

This FYR included a site reconnaissance on 17 July 2024. Those participating included Mr. William Myer, ANG/A4VR; Ms. Mikah Inkawhich, ANG 148 FW; SSgt Blake Bornholdt, ANG 148 FW; Mr. Mark Elliott, MPCA; Mr. Dan Cervin, MPCA; Mr. Tom Barzyk, BB&E, and Ms. Celeste Holtz, BB&E. The purpose of this FYR is to assess the current status of the sites in support of the protectiveness determination of the remedy.

The site inspection component of the FYR is conducted and maintained by local ANG installation personnel. The most recent site inspections were completed by base personnel on 17 July 2024. Site inspections are documented by installation personnel by completing the LUC checklist which are filed and maintained by the installation.

LUCs/ICs are managed properly by the ANG utilizing multiple tools including the aforementioned site inspections and completion of the associated LUC checklist. In the event of a property transfer/potential land development, LUCs/ICs are also properly communicated to the property owner and/or other stakeholders. Tools utilized by the ANG for tracking/managing LUCs/ICs include, but are not limited to the following:

- ANG's Geographic Information System (GIS) system (GeoBase): GeoBase can be used to depict IRP site boundaries and the associated LUC/IC description, as applicable.
- Enterprise Environmental Safety and Occupational Health – Management Information System (EESOH-MIS): EESOH-MIS is a web-based information system used by the Air Force/ANG to collect and track environmental data. It is used to track hazardous waste, hazardous materials, air quality, and in this case, environmental liabilities/cleanup data and information for the Environmental Restoration Program including LUCs/ICs at sites. EESOH-MIS is required to be updated routinely/frequently to ensure

information is up to date/accurate, including updating the LUCs/ICs information on an annual basis, at a minimum.

- Annual LUCs/ICs Tracking/Checklist: LUCs/ICs are inspected/maintained on an annual basis via completion of the Annual LUCs/ICs Checklist. To ensure accountability at the base level, the annual LUCs/ICs checklist, when prepared (and/or updated) is transmitted from NGB to the Base via an electronic Staff Summary Sheet (eSSS). The eSSS is an electronic document used in the Air Force/ANG for coordinating and tracking staff packages, and includes key elements like coordination, identification, and a summary, ensuring that the information and requirements are reviewed and signed off on by the appropriate personnel at the base. In the instance of the LUCs/ICs eSSS, the package is routed up to the Base Civil Engineer level.
- IDPs: IDPs are developed/prepared for bases to support on-installation planning decisions and align strategic, operational, and tactical requirements with mission support requirements while considering other constraints such as natural resources, incompatible land uses, etc. IDPs are often used by the Air Force/ANG to ensure the appropriate personnel at the Base are informed of any land use restrictions (e.g., areas that may have LUCs/ICs in place).
- FYRs: FYRs are used as a component under CERCLA to evaluate the status of LUCs/ICs at sites where a site did not meet UU/UE criteria and LUCs/ICs were identified in the ROD. The FYR process is utilized for sites with LUCs/ICs to ensure that cleanup actions at sites are still effective and continue to protect human health and the environment.

No additional site activities were noted that would interfere with the planned remedies. The anticipated future land use is not expected to change, and, as such, no changes to the current remedies are recommended or required.

V. TECHNICAL ASSESSMENT

QUESTION A: *Is the remedy functioning as intended by the decision documents?*

Question A Summary:

Yes, the remedies for Sites 2, 3, 4, 21, 23, 25, and 29 are functioning as intended and documented in the RODs, so long as LUCs/ICs remain in place until the sites meet the requirements for UU/UE status. A remedy has not yet been implemented at MSR Sites TS737 and TS738; however, contracting actions are in progress. Sites 3, 4, 21, 25, and 29 are being actively monitored to evaluate protectiveness and progress towards achieving the RAOs specified in their respective RODs. Site 23 has been reopened, and an RI is ongoing to determine the nature and extent of PFAS at the site.

QUESTION B: *Are the exposure assumptions, toxicity data, cleanup levels, and remedial action objectives (RAOs) used at the time of the remedy selection still valid?*

Question B Summary:

Yes, the assumptions and RAOs used at the time of remedy selection are still considered valid, applicable, or relevant in accordance with CERCLA, 42 USC § 9601 et seq., as amended by the Superfund Amendments and Reauthorization Act of 1986 and the NCP, 40 CFR Part 300 et seq., as amended.

For Site 3, in December 2021, the analytical method used for 1,4-dioxane was modified from EPA Method SW8260D to EPA Method SW8270-SIM to achieve a reporting limit of less than the MDH groundwater value of 1 µg/L. Use of EPA Method SW8270-SIM was successful in meeting the lower reporting limit. A new analytical laboratory Method 8260C-SIM has been used, starting in May 2022 at Site 3. A reporting limit of 1 µg/L was achieved using this method and is comparable to the method identified in the final Addendum No. 1, Long-Term Monitoring Work Plan for Site 3 (Jacobs, 2021). Based on the assumptions and nature of the remedy for Site 3, this will not affect the protectiveness of the remedy.

There have been no changes in the land use or the physical condition of the Base that would affect the protectiveness of the remedies. There have been no significant changes to the exposure pathways used in the baseline risk assessments for Sites 2, 3, 4, 21, 23, 25, 29, TS737, or TS738. The original assumptions regarding current and future land use for the sites remain valid.

The DDs for Site 2 and Site 23 present monitoring data that indicates no exceedances of HRLs in groundwater, yet NFA was based on continued industrial land use and implementation of LUCs/ICs to ensure industrial land use and land transfer notification. This appears to be unnecessary and may warrant amendment of the DDs to remove this requirement if the stakeholders agree.

QUESTION C: *Has any other information come to light that could call into question the protectiveness of the remedy?*

Question C Summary:

The current remedial and post-response action activities remain protective per the objectives of the current ROD/DDs.

The identification of emerging contaminants at Site 23 led the ANG to re-open Site 23 to address PFAS contamination. A Base-wide RI is underway at the installation to determine the extent of PFAS. As PFAS are emerging contaminants, these new potential COCs will be evaluated through a similar process used under the IRP and consistent with the provisions of CERCLA, as amended. Any other PFAS overlap with the active sites in this FYR will be evaluated upon completion of the RI in the next FYR.

No other information has become known that could call into question the protectiveness of the remedy at the nine sites included in this FYR.

VI. ISSUES/RECOMMENDATIONS

Issues/Recommendations

Issues and Recommendations Identified in the Five-Year Review:

OU(s): Site 23	**Issue Category:** Changed Site Conditions			
	Issue: The identification of emerging contaminants at Site 23 potentially related to the initial release indicates the current NFRAP DD is likely insufficient to address the current risk.			
	Recommendation: Determine the nature and extent of PFAS and assess associated risk.			
Affect Current Protectiveness	**Affect Future Protectiveness**	**Party Responsible**	**Oversight Party**	**Milestone Date**
Yes	Yes	Federal Facility	State	November 2027

OU(s) without Issues/Recommendations Identified in the Five-Year Review: Sites 2, 3, 4, 21, 25, 29, TS737, and TS738

OTHER FINDINGS

The MPCA continues to have concerns regarding the status of LUCs/ICs at the nine sites, specifically regarding proper documentation of LUCs/ICs inspections, communication with the DAA, and sites that are on land not owned by the DoD. It is recommended that Base Civil Engineering personnel continue to maintain communication with the MPCA (and other stakeholders, such as the DAA) regarding LUCs/ICs and develop a LUC Implementation Plan to aid in documentation regarding inspections, maintenances, and potential actions needed for LUCs/ICs.

In addition to the LUC Implementation Plan, it is recommended that the ANG update the IDP to include sites with LUCs/ICs, and that the ANG's GIS system (GeoBase) continue to be updated/maintained along with other tracking tools described above (e.g., EESOH-MIS, completion of the Annual LUCs/ICs checklist, etc.).

Per discussions with MPCA during the site visit, MPCA noted having concerns regarding VI for the sites that were going to be included in the RPO effort (Sites 3, 4, 21, 25, and 29). As such, a VI evaluation, comparing the most recent groundwater LTM data against USEPA vapor intrusion screening levels was conducted at each of the sites included in the RPO (Sites 3, 4, 21, 25, and 29; BB&E, 2025). Options outlined in the RPO are being considered for implementation.

Due to the potential for ANG to divest land for several of the sites (e.g., Sites 3, 4, and 29) in the near future, restrictive closure (e.g., permanent LUCs/ICs, inclusion of vapor barriers, etc.) due to relatively low concentrations of COCs, was discussed as an option in order to expedite the property divestment process. Restrictive site closure was evaluated as an alternative in the RPO.

Comments from MPCA on the Draft Final version of this FYR, ANG's responses to the comments, and a letter containing MPCA's approval of the FYR can be found in **Appendix L**.

VII. PROTECTIVENESS STATEMENT

Sitewide Protectiveness Statement	
Protectiveness Determination: Protectiveness Deferred	*Planned Addendum Completion Date:* November 2028
Protectiveness Statement: A protectiveness determination of the remedy at Site 23 cannot be made until further information is obtained. The emerging contaminant PFAS, related to the original release, is present and the current risk has not been evaluated. Further information will be obtained by completing an RI, determining the nature and extent of PFAS contamination, and completing a risk assessment. It is expected that these actions will take approximately four years to complete, after which a protectiveness determination can be made. There are no issues at Sites 2, 3, 4, 21, 25, 29, TS737, and TS738 that would affect protectiveness. The remedies at Sites 2, 3, 4, 21, 25, 29, TS737, and TS738 are protective of human health and the environment.	

VIII. NEXT REVIEW

Pursuant to CERCLA Section 121(c), 42 USC § 9621(c), and as provided in the current guidance (OSWER Directive 9355.7-03B-P, Comprehensive Five-Year Review Guidance [USEPA, 2001]), the NGB will conduct a FYR within five years from the completion of the previous FYR dated August 2019 (BB&E, 2019). Previous FYRs were completed in August 2019 (Sites 2, 3, 4, 17, 20, 21, 22, 23, 25, and 29) and June 2014 (Sites 3 and 25). This is the third FYR for Duluth ANGB.

This FYR results in a determination of Protectiveness Deferred for Site 23. An FYR Addendum is planned for November 2028 to make a protectiveness determination upon completion of an RI and risk assessment. After completion of the FYR, the trigger for subsequent reviews is the signature date of the previous FYR report. Therefore, the completion date for the next FYR is five years from the signature date of this FYR.

Table 1. Site Status Summary
148th Fighter Wing
Duluth Air National Guard Base
Duluth, Minnesota

Notes:

[1] At some point in time, the Duluth Airport Authority, a political subdivision created by Minnesota Laws, 1969, CHAP 577, was created to administer land owned by the City of Duluth at the former Duluth Municipal Airport. Therefore, historical property records which state Duluth Airport Authority, are owned by the City of Duluth.
Columns 1 and 2 correspond to the United States Air Force/Air National Guard (ANG) Enterprise Environmental, Safety, and Occupational Health Management Information System (EESOH-MIS) site IDs/names for each Installation Restoration Program (IRP) site. Columns 3 - 6 were added per request from MPCA and correspond to current and historic MPCA Site Response IDs, project numbers and names.
AFB - Air Force Base
AOC - Area of Concern
AR - Administrative Record (number corresponds to the document number in the "Duluth Int Airport, MN" administrative record).
CERCLA - Comprehensive Environmental Response, Compensation, and Liability Act
DD - Decision Document
DPDO - Defense Property Disposal Office
EESOH-MIS - Enterprise Environmental, Safety, Occupational, Health Management Information System
FYR - Five Year Review
IC - Institutional Control
ID - Identification
LUC - Land Use Control
MANG - Minnesota Air National Guard
MPCA - Minnesota Pollution Control Agency
NA - Not Applicable
NFA - No Further Action
NFRAP - No Further Response Action Planned
OU - Operable Unit
PFAS - Per- and polyfluoroalkyl substances
POL - Petroleum, Oil, and Lubricants
RA-O - Remedial Action-Operations
RCRA - Resource Conservation and Recovery Act
ROD - Record of Decision
SC - Site Closed
TCE - trichloroethylene
UU/UE - unlimited use/unrestricted exposure

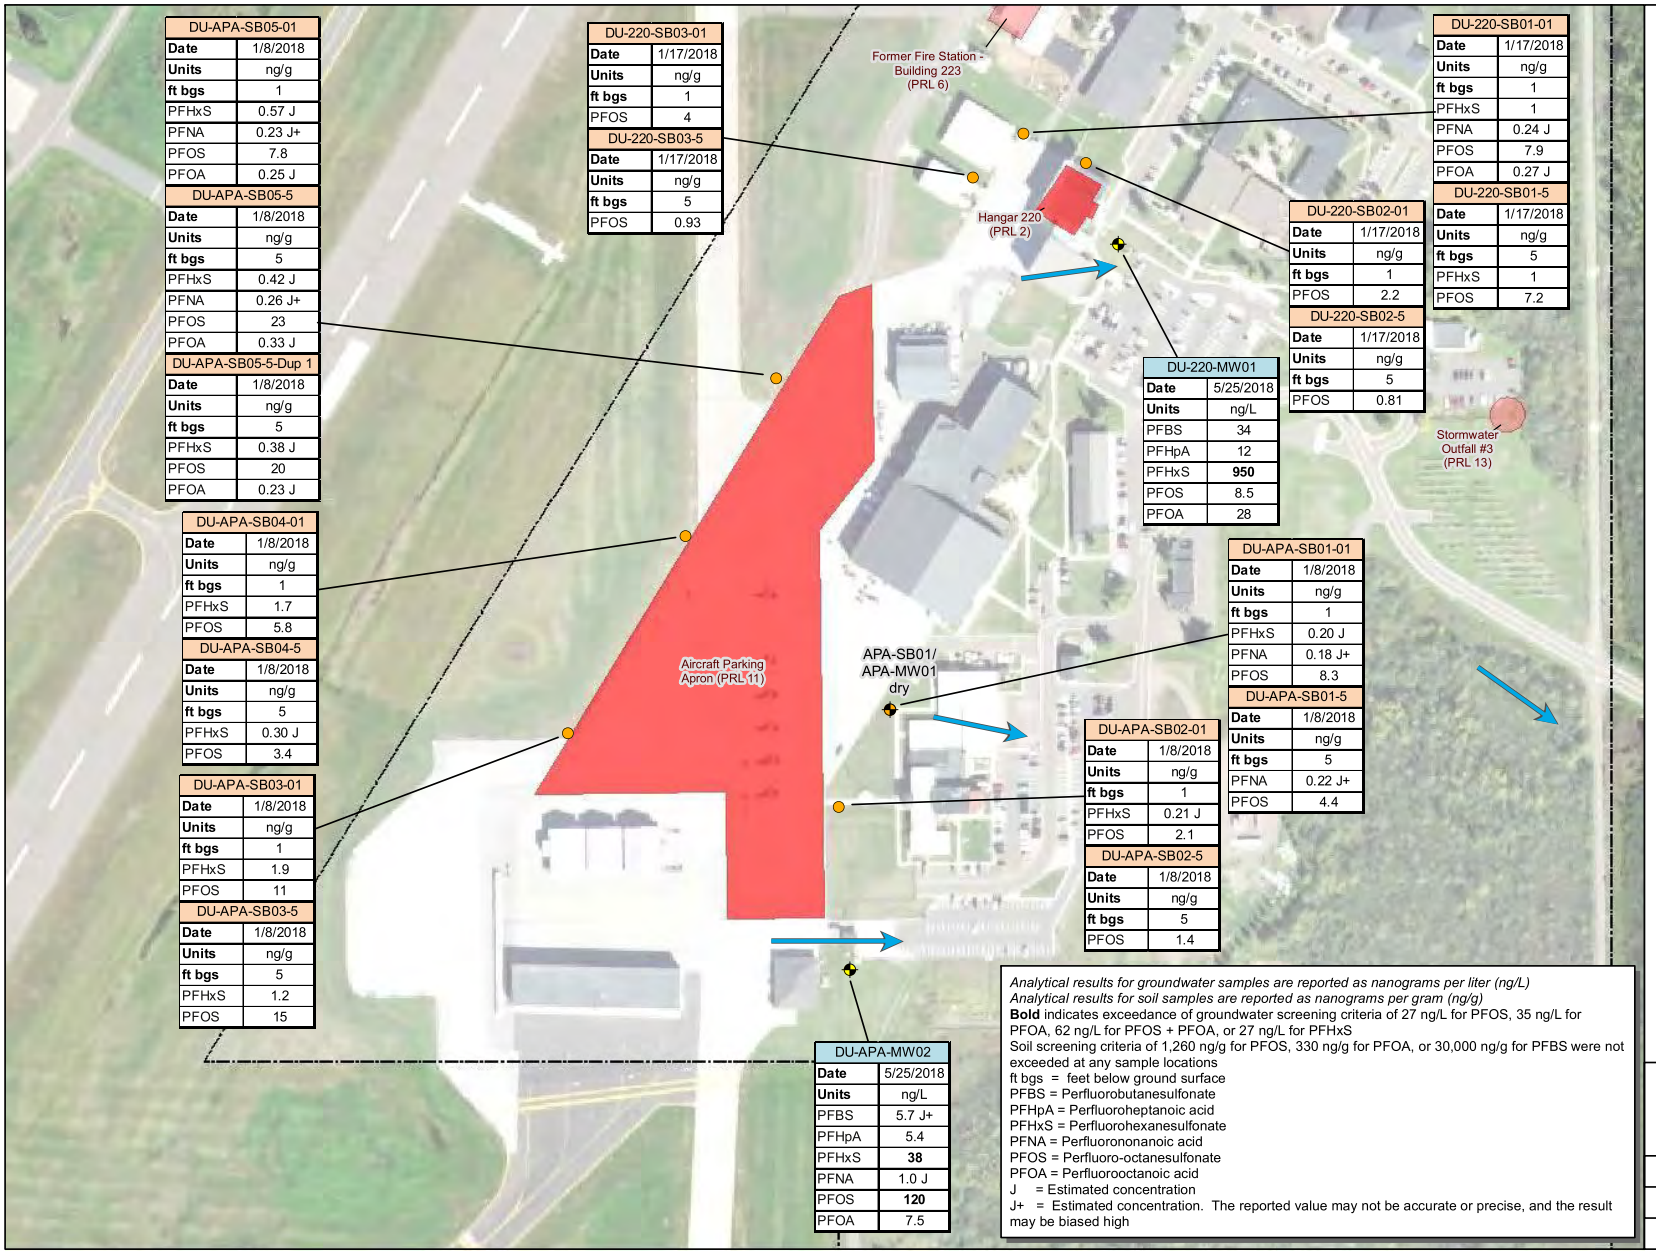

Figure 14

Detected Soil and Groundwater Sample Results
PRLs 2 & 11: Hangar 220 & Aircraft Parking Apron

Analytical results for groundwater samples are reported as nanograms per liter (ng/L)
Analytical results for soil samples are reported as nanograms per gram (ng/g)
Bold indicates exceedance of groundwater screening criteria of 27 ng/L for PFOS, 35 ng/L for PFOA, 62 ng/L for PFOS + PFOA, or 27 ng/L for PFHxS
Soil screening criteria of 1,260 ng/g for PFOS, 330 ng/g for PFOA, or 30,000 ng/g for PFBS were not exceeded at any sample locations
ft bgs = feet below ground surface
PFBS = Perfluorobutanesulfonate
PFHpA = Perfluoroheptanoic acid
PFHxS = Perfluorohexanesulfonate
PFNA = Perfluorononanoic acid
PFOS = Perfluoro-octanesulfonate
PFOA = Perfluorooctanoic acid
J = Estimated concentration
J+ = Estimated concentration. The reported value may not be accurate or precise, and the result may be biased high

APPENDIX C – SITE 2 SUPPORTING INFORMATION

6.0 DECISION

On the basis of the findings at IRP Site 2 at the 148th FW, MNANG, Duluth, Minnesota, the groundwater at IRP Site 2 does not pose an unacceptable threat to human health or the environment for the current industrial land use. Adequate institutional controls are in place, through the base Master Plan, for both current land use, and for the future, in the event of a change in land use. No remedial action is necessary for groundwater at this site to ensure protection of human health and the environment, as long as the current land use is maintained and controlled. In accordance with National Oil and Hazardous Substances Pollution Contingency Plan (NCP) Section 300.430 (f)(4)(ii), a review will be conducted within five years after finalization of this Decision to ensure that this decision provides continued protection of human health and the environment.

Notes:

[a] *Minnesota State Plane North N83, U.S. Survey Foot.*

Identifies well locations influenced by past injections

°C = degree(s) Celsius DO = dissolved oxygen mV = millivolt(s) NS = not sampled

Table 3-1. Summary of Groundwater Elevations and Field Water Quality Parameters

Site 3 Long-Term Monitoring Report 8 (June 2024), 148th Fighter Wing, Duluth Air National Guard Base, Duluth International Airport

Well ID	State Plane[a] Northing Coordinate	State Plane[a] Easting Coordinate	Top of Casing Elevation (feet amsl)	Date	Depth to Water (feet btoc)	Water Level Elevation (feet amsl)	Conductivity (mS/cm)	Temp (°C)	pH	ORP (mV)	DO (mg/L)	Turbidity (NTU)

amsl = above mean sea level
btoc = below top of casing
mg/L = milligram(s) per liter
mS/cm = millisiemens(s) per centimeter
NA = not available
NM = not measured
NTU = nephelometric turbidity unit
ORP = oxidation-reduction potential

Notes:

The applicable cleanup criteria for the site is the ROD cleanup level. In the absence of a promulgated cleanup level, the cleanup criteria is the Minnesota Department of Health (MDH) - Health-based Values (HBV) or the Risk Assessment Advice (RAA).

[a] Minnesota Department of Health (MDH) Health Risk Level (HRL)

[b] Minnesota Department of Health (MDH) Health-Based Value (HBV). The MDH develops HBVs when Minnesota agencies need guidance for chemicals that do not have Health Risk Limits (HRLs).

[c] MDH Risk Assessment Advice (RAA). The MDH provides RAA to assist the agencies in evaluating potential health risks to humans from exposures to a chemical. Generally, RAA contains greater uncertainty than HRLs, HRVs, and HBVs because the available information is more limited.

µg/L = microgram(s) per liter
COC = constituent of concern
DCA = dichloroethane
DCE = dichloroethene
ID = identification
NA = not analyzed
ND = non-detect
NS = not specified
PCE = tetrachloroethene
ROD = record of decision
TCA = trichloroethane
TCE = trichloroethene
(D) = field duplicate

Laboratory Qualifiers (Q):
J = result is less than the RL, but greater than or equal to the MDL and the concentration is an approximate value
H = Sample was prepped and analyzed beyond the specified hlod time
B = For organic analyses, the parmeter was detected in the laboratory lank, as well as the sample
U = Less then the indicated laboratory RL
Shaded = Results exceeds the ROD cleanup level or MDH groundwater HRL

Notes

Shaded value indicates exceedance of criteria.
Bolded values indicate concentrations above detection limits
Criteria from the Minnesota Department of Health (MDH) "Human Health-Based Water Guidance Table"
Only compounds that have values detected above laboratory detection limit is shown
mg/L: milligrams per liter
µg/L: micrograms per liter
< : not detected at or above value
B: The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the
relative to the sample result as defined by theDOD or NELAC standards.
D: The reported result is from a dilution.
DRO: Diesel Range Organics
DUP: Field duplicate sample
GRO: Gasoline Range Organics
HBV: Health-Based Value
HRL: Human Risk Limit
J: The analyte was positively identified; the associated number value is the approximate concentration of the analyte in the sample
L: The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
NS: Not Sampled
NC: No Criteria
T: Sample received with improper preservation or temperature.
U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
DOD-QSM 4.2 definition : Analyte was not detected and is reported as less than the LOD or as
[1]Indicates duplicate sample collected
[2]Indicates sample was diluted by a dilution factor due to groundwater exceedances of naphthalene. Non detected values are compared to the diluted Limit of Detection. See Level IV for more details.

Notes:
Criteria from the Minnesota Department of Health (MDH) "Human Health-Based Water Guidance Table"
µg/L: micrograms per Liter
< : not detected at or above value
B: The analyte was found in the associated method blank at a level that is significant relative to the sample result as
D: The reported result is from a dilution.
DRO: Diesel Range Organics
DUP: Field duplicate sample
GRO: Gasoline Range Organics
HBV: Health-Based Value
HRL: Human Risk Limit
J: Estimated detected concentration.
NS: Not Sampled
NC: No Criteria
Bolded values indicate concentrations above detection limits
Shaded value indicates exceedance of criteria.
U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. DOD-QSM 4.2 definition : Analyte was not detected and is reported as less than the LOD or as defined by the project.

Created by: JR 10/20/2020 - Checked by:

Notes:

°C - degrees Celsius
mS/cm - milliSiemens per centimeter
mg/L - milligram per liter
mV - millivolt
NA - Not Applicable. Well volume was not calculated due to obstruction in well casing.
NTU - nephelometric turbidity unit
ORP - oxidation reduction potential
[1] Indicates that sample was collected after monitoring well was purged dry
Over Range - NTUs greater than the meter detection limit

Table 3
Groundwater Analytical Table
IRP Site 21, Duluth ANGB
Duluth, MN
