Notes:
Shaded value indicates exceedance of criterion.
Bolded values indicate concentrations above detection limits
Criteria from Minnesota Pollution Control Agency (MPCA) 2015
mg/L: milligrams per liter
µg/L: micrograms per liter
*: ANG Target Remedial Objective as set in the Site 21 2011 ROD. Current MPCA HRL is 0.4 ug/L
[1]Indicates duplicate sample collected
< : not detected at or above value
MDH: Minnesota Department of Health
HRL: Health risk Limit
HBV: Health Based Value
RAA: risk assessment advice
U: The analyte concentration is less than the Detection Limit
ND: Non Detect
Y: Replicate/Duplicate precision outside acceptance limits
Z: Specified calibration criteria was not met
M: Manually integration used to determine area response
J: Estimated detected concentration.
NC: No Criteria
NS: Not Sampled
Q: % REC exceeded control Limits. When applied to
UJ: Estimated detection limit concentration.

6.0 DECISION

On the basis of the findings at IRP Site 23 at the 148th FW, MNANG, Duluth, Minnesota, the groundwater at IRP Site 23 does not pose an unacceptable threat to human health or the environment for the current industrial land use. Adequate institutional controls are in place, through the base Master Plan, for both current land use, and for the future, in the event of a change in land use. No remedial action is necessary for groundwater at this site to ensure protection of human health and the environment, as long as the current land use is maintained and controlled. In accordance with National Oil and Hazardous Substances Pollution Contingency Plan (NCP) Section 300.430 (f)(4)(ii), a review will be conducted within five years after finalization of this Decision to ensure that this decision provides continued protection of human health and the environment.

Data Qualifiers:

J = Estimated concentration

J+ = Reported value may not be accurate or precise, but the result may be biased high.

U = Not detected at concentration shown

APPENDIX H – SITE 25 SUPPORTING INFORMATION

Table 1. Groundwater Cleanup Standards
148th Fighter Wing, Duluth Air National Guard Base, Duluth, Minnesota

Chemical	CAS Number	MDH Groundwater Value (µg/L)	MDH Groundwater Value Last Updated
Benzene	71-43-2	2	2009
Ethylbenzene	100-41-4	50	2011
Xylenes	1330-20-7	300	2020
1,2,4-TMB	95-63-6	30	2020
1,3,5-TMB	108-67-8	30	2020
1,2-DCA	107-06-2	1	2013
TCE	79-01-6	0.4	2015
TPH-DRO	NA	NE	NA

Note: MDH groundwater value includes the HRLs, HBVs, and RAAs. MDH develops HBVs when Minnesota agencies need guidance for chemicals that do not have HRLs. RAA is advice that MDH issues to Minnesota agencies. MDH provides RAA to assist the agencies in evaluating potential health risks to humans from exposures to a chemical. Generally, RAA contains greater uncertainty than HRLs and HBVs because the available information is more limited.

The applicable cleanup criterion for the site is the HRL. In the absence of a promulgated HRL, the cleanup criterion is the HBV. In the absence of an established HBV, the cleanup criterion is the RAA.

µg/L = Micrograms per Liter
1,2-DCA = 1,2-Dichloroethane
1,2,4-TMB = 1,2,4-Trimethylbenzene
1,3,5-TMB = 1,3,5-Trimethylbenzene
CAS = Chemical Abstract Service
HBV = Health-Based Value
HRL = Health Risk Limit
MDH = Minnesota Department of Health
NA = Not Available
NE = Not Established
RAA = Risk Assessment Advice
TCE = Trichloroethene
TPH-DRO = Total Petroleum Hydrocarbons-Diesel Range Organics

Bold denotes detected concentration.
Bold highlighted denotes concentration that exceeds MDH groundwater value.

Note: 025-023MW-07-01 and 025-030MW-07-01 are field duplicates.

Data Qualifiers:

J = Estimated: The analyte was positively identified; the quantitation is an estimation
U = Undetected at the Limit of Detection
UJ = Not detected and associated value estimated

µg/L = Micrograms per Liter
DRO = Diesel Range Organics
ft = Feet
ID = Identifier
MDH = Minnesota Department of Health
mg/L = Milligrams per Liter
NE = Not Established
TPH = Total Petroleum Hydrocarbons
VOC = Volatile Organic Compound

Notes:

* Result exceeds the Class 2A Surface Water Standard

** Minnesota Department of Health (MDH) Health-Based Value (HBV) - MDH develops HBVs when Minnesota agencies need guidance for chemicals that do not have Health Risk Limits (HRLs).

*** MDH Risk Assessment Advice (RAA) - RAA is advice that MDH issues to Minnesota agencies. MDH provides RAA to assist the agencies in evaluating potential health risks to humans from exposures to a chemical. Generally, RAA contains greater uncertainty than HRLs, HRVs, and HBVs because the available information is more limited.

The applicable cleanup criteria for the site is the HRL. In the absence of a promulgated HRL, the cleanup criteria is the HBV. In the absence of an established HBV, the cleanup criteria is the RAA.

025-030MW Well Sampled in December 2023

Shaded = Result exceeds the applicable MDH Groundwater Value

µg/L = Micrograms per Liter

NA= Not Analyzed

ND = Non-Detect

DCA = Dichloroethane

TCE = Trichloroethane

TMB = Trimethlybenzene

Notes:
amsl - above mean sea level
NA - not applicable
NM - not measured
[1]Well Casing - Well casing elevations taken from 2015 survey completed by ERM
[2]NM - Wells on airfield were not included in the 2015 survey
[3]NA - Groundwater elevation was not calculated
[4]NM - Depth to water not measured, monitoring well not located during initial gauging event

Table 2
Groundwater Field Parameters
IRP Site 29, Duluth ANGB

Notes:

°C - degrees Celsius

mg/L - milligram per liter

mS/cm - milliSiemens per centimeter

mV - millivolt

NTU - nephelometric turbidity unit

ORP - oxidation reduction potential

[1] Indicates that sample was collected after monitoring well was purged dry

Table 3
Groundwater Analytical Data
IRP Site 29, Duluth ANGB

Notes:
Shaded value indicates exceedance of criterion.
Bolded values indicate concentrations above detection limits
Criteria from Minnesota Pollution Control Agency (MPCA) 2015
Only compounds that have values detected above laboratory detection limit is shown
mg/L: milligrams per liter
µg/L: micrograms per liter
[1]Monitoring well ID's for GW29-B and GW29-C were mislabeled in during sampling.
[2]Indicates duplicate sample collected
Sample ID's on figures and tables have been corrected. Lab reports contain the mislabeled samples.
*: Compared criteria as set in the Site 29, 2013 ROD
< : not detected at or above value
HRL: Health Risk Level
DUP: Field duplicate sample
MDH: Minnesota Department of Health
B: Analyte detected in associated method blank
D: Diluted Out
J: Estimated detected concentration.
L: Significant peaks were detected outside the chromatographic window
M: Matrix spike and/or Matrix spike duplicate recovery outside acceptance limits.
NC: No Criteria
NS: Not Sampled
O: Complete BOD oxygen depletion
T: Sample received with improper preservation or temperature.
Q: % REC exceeded control Limits. When applied to sample analytes- denotes an associated LCS recovery that exceeded control limits.
U: Analyte concentration was not above the detection level.
UJ: Estimated detection limit concentration.
V: Raised Quantitation or Reporting Limit due to limited sample amount or dilution for matrix background interferences.
Y: Replicate/Duplicate precision outside acceptance limits
Z: Calibration criteria exceeded
HBV: Health Based Values
RAA: Risk Assessment Advice
=: validated result, which is detected and unqualified

APPENDIX J – TS737 AND TS738 SUPPORTING INFORMATION

Table 7-1: Summary of Chemicals of Potential Concern
Human Health Risk Assessment for the Trap Range and the Skeet Range
Duluth Air National Guard Base

Munitions Response Area	Chemical of Potential Concern	Media				
		Surface Soil	Subsurface Soil	Sediment	Surface Water	Groundwater
Trap Range	Antimony	X	X			
	Arsenic	X	X	X	X[t]	X[t,d]
	Copper	X		X	X[t]	
	Iron	X	X	X	X[t,d]	X[t,d]
	Lead	X	X		X[t]	
	Benzo(a)anthracene				X	
	Benzo(a)pyrene	X	X	X	X	
	Benzo(b)fluoranthene			X	X	
	Benzo(k)fluoranthene				X	
	Chrysene				X	
	Indeno(1,2,3-cd)pyrene			X		
Skeet Range	Antimony	X	X			
	Arsenic	X	X			
	Iron	X	X			
	Lead	X	X		X[t,1]	X[t,d]
	Benzo(a)anthracene	X	X			
	Benzo(a)pyrene	X	X	X[1]		
	Benzo(b)fluoranthene	X	X			
	Benzo(k)fluoranthene					
	Dibenz(a,h)anthracene	X	X			
	Indeno(1,2,3-cd)pyrene		X			

Notes:

X = Chemical was identified as a COPC for this media.

[t] = total metal, unfiltered water analyzed

[d] = dissolved metal, filtered water analyzed

[1] The same COPC was identified for both the in-grid and outside of grid areas.

Table 7-2: Summary of Exposure Point Concentrations
Humand Health Risk Assessment for the Trap Range and the Skeet Range
Duluth Air National Guard Base

Munitions Response Area	Chemical of Potential Concern	Exposure Point Concentrations by Media				
		Surface Soil (mg/kg)	Subsurface Soil (mg/kg)	Sediment (mg/kg)	Surface Water (ug/L)	Groundwater (ug/L)
Trap Range	Antimony	213.7	8.702			
	Arsenic	14.65	13.25	5.53	63.2	6.025/1.705[a]
	Copper	50.31		102	424.8	
	Iron	18684	18669	43212	400429/678.8[a]	19350/28600[a]
	Lead	6790	743.5		104	
	Benzo(a)anthracene			0.3	0.0083	
	Benzo(a)pyrene	0.032	0.0165	0.58	0.0086	
	Benzo(b)fluoranthene			X	0.018	
	Benzo(k)fluoranthene				0.5	
	Chrysene				0.0074	
	Indeno(1,2,3-cd)pyrene			0.27		
Skeet Range	Antimony	20.38	1.009			
	Arsenic	3.3	2.8			
	Iron	23000	24000			
	Lead	1034	156.8		35.7/22[b]	86.15/66.25[a]
	Benzo(a)anthracene	0.193	0.47			
	Benzo(a)pyrene	0.171	0.67	0.041/0.036[b]		
	Benzo(b)fluoranthene	0.276	0.82			
	Benzo(k)fluoranthene					
	Dibenz(a,h)anthracene	0.0315	0.14			
	Indeno(1,2,3-cd)pyrene		0.52			

Notes:

mg/kg = milligram per kilogram

ug/L = microgram per liter

[a] The first value is the total concentration and the second value is the dissolved concentration.

[b] The first value is for the media concentration within the grid, while the second is outside of the grid.

Table 7-3: Background Comparison for Metal COPCs, Trap Range and Skeet Range (mg/kg)

Chemical	Maximum Detection	EPC	95th Percentile Background Value	Maximum > 95th Background?	EPC > 95th Background?	Duluth ANGB Background Range	Maximum Above Background Range?	EPC Above Background Range?
Surface Soil Metal COPCs (mg/kg) - Trap Range								
Antimony	1280	213.7	N/A	--	--	N/A	--	--
Arsenic	215	14.7	3.065	Yes	Yes	1.36 – 3.72	Yes	Yes
Copper	188	50	39.7	Yes	Yes	6.09 – 71.2	Yes	No
Iron	38,000	18,684	24,402	Yes	No	14400 – 26100	Yes	No
Lead	75100	6,790	13.62	Yes	Yes	4.47 – 14.4	Yes	Yes
Subsurface Soil Metals COPCs (mg/kg) - Trap Range								
Antimony	32.75	8.702	N/A	--	--	N/A	--	--
Arsenic	40	13.3	3.065	Yes	Yes	0.21 – 29	Yes	No
Iron	27,000	18669	24,402	Yes	No	1,300 – 140,000	Yes	No
Lead	2750	744	13.62	Yes	Yes	0.19 – 40	Yes	Yes
Groundwater Metals COPC - Trap Range								
Arsenic, total	6.03	6.03	N/A	--	--	N/A	--	--
Arsenic, dissolved	1.71	1.71	N/A	--	--	N/A	--	--
Iron, total	19,350	19,350	328.5	Yes	Yes	25.2 – 328.5	Yes	Yes
Iron, dissolved	28,600	28,600	62.7	Yes	Yes	16.5 – 62.7	Yes	Yes
Surface Soil Metal COPCs (mg/kg) - Skeet Range								
Antimony	259	20.38	N/A	--	--	N/A	--	--
Arsenic	3.3	3.3	3.065	Yes	Yes	0.21 – 29	Yes	No
Iron	23,000	23,000	24,402	Yes	Yes	1,300 – 140,000	Yes	Yes
Lead	13,000	1,034	13.62	Yes	Yes	0.19 – 40	Yes	Yes
Subsurface Soil Metals COPCs (mg/kg) - Skeet Range								
Antimony	2.79	1.009	N/A	--	--	N/A	--	--
Arsenic	2.8	2.8	3.065	Yes	No	0.21 – 29	Yes	No
Iron	24,000	24,000	24,402	Yes	Yes	1,300 – 140,000	Yes	Yes
Lead	504.6	157	13.62	Yes	Yes	0.19 – 40	Yes	Yes
Groundwater Metals COPC - Trap Range								
Lead, total	86.2	86.2	0.512	Yes	Yes	0.00578 – 0.512	Yes	Yes
Lead, dissolved	66.3	66.3	N/A	--	--	N/A	--	--

Notes:

COPC = chemical of potential concern

EPC = exposure point concentration

mg/kg = milligrams per kilogram

ug/L = microgram per liter

N/A = not available; no background data are available for this metal

-- = comparison to background could not be made

Table 7-4: Summary of Risks (Excluding Lead[a])
Trap Tange and Skeet Range
Duluth Air National Guard Base

Munitions Response Area	Receptors	Estimated Risks and Hazards with Risk Drivers[b]											
		Surface Soil		Subsurface Soil		Sediment		Surface Water		Groundwater		Receptor Total

	Resident - Child	8E-06 Arsenic and BaP	1 Antimony	NE	NE	NE	NE	NE	NE	No Cancer COPCs	No Noncancer COPCs	8E-06	1
	Resident - Adult Plus Child	1E-05 Arsenic and BaP	—	NE	NE	NE	NE	NE	NE	No Cancer COPCs	—	1E-05	NE

Notes:
— = Adult + Child risks are not estimated for non-cancer hazards.
ILCR = incremental lifetime cancer risk
HI = hazard index

Table 7-5: Summary of Blood Lead Levels
Human Health Risk Assessment for the Trap Range and the Skeet Range
Duluth Air National Guard Base

Munitions Response Area	Media	Lead Statistics and Blood Lead Levels by Media						
		FOD	Range of Detects	Mean [a] (mg/kg)	Adult PRG (mg/kg)	Probability Fetal PbB >10 µg/dL [b]	Child PRG (mg/kg)	PbB (µg/dL) In Child [c,d]
Trap Range	Surface Soil	93/93	3.97 - 75100	2492	2,240	6.6%	418	17.6
	Subsurface Soil	22/22	4.15 - 2750	406.6	2,240	0.0%	418	4.6
Skeet Range	Surface Soil	75/76	4.025 - 13000	286.7	2,240	0.0%	418	3.5 (7.8)
	Subsurface Soil	30/30	2.9 - 504.6	58.83	2,240	0.0%	418	1.4 (6.0)

Notes:

FOD = frequency of detection; number of detections/total number of samples

mg/kg = milligram per kilogram

PRG = preliminary remediation goal

HQ =hazard quotient

PbB = blood lead level

µg/dL = micrograms per deciliter

[a] Both the Adult Lead Model and the Integrated Exposure Uptake Biokinetic Model recommend tat mean lead concentrations be used in estimating blood lead levels.

[b] USEPA, *Update of the Adult Lead Methodology's Default Baseline Blood Lead Concentration and Geometric Standard Deviation Parameters*, June 2009.

[c] USEPA, *Integrated Exposure Uptake Biokinetic Model for Lead in Children*, 2010.

[d] Blood lead levels in parantheses were calculated using the groundwater mean for dissolved lead in monitoring wells within the Skeet Range as input into the IEUBK model.

Table 10-1
Summary of Human Health Risk Assessment

Receptor	Exposure Pathways Potentially Contributing to Risk/HI	Summary of Human Health Risk Assessment
Trap Range Receptors		
Current/Future On-site Indoor Worker	***Surface Soil Exposures.*** Incidental ingestion of and dermal contact with surface soil.	USEPA's acceptable cancer risk management range of 10^{-6} to 10^{-4} was not exceeded for this receptor and the evaluated pathway(s). USEPA's target HI of 1 was not exceeded for this receptor and the evaluated pathway(s).
Current/Future On-site Outdoor Worker	***Surface Soil Exposures.*** Incidental ingestion of surface soil.	USEPA's acceptable cancer risk management range of 10^{-6} to 10^{-4} was not exceeded for this receptor and the evaluated pathway(s). Exposure to lead in surface soil by a female outdoor worker may result in elevated blood lead levels in a fetus above USEPA's target PbB level of 10 µg/dL.
Current/Future Recreational Visitor/Trespasser (adult and child)	***Surface Soil, Surface Water and Sediment Exposures.*** Incidental ingestion of and dermal contact with surface soil. Dermal contact with surface water. Incidental ingestion and dermal contact with sediment.	USEPA's acceptable cancer risk management range of 10^{-6} to 10^{-4} was not exceeded for this receptor and the evaluated pathway(s). USEPA's target HI of 1 was not exceeded for this receptor and the evaluated pathway(s).
Future Resident (adult and child)	***Surface Soil and Groundwater Exposures.*** Incidental ingestion of and dermal contact with surface soil. Dermal contact with groundwater (adult only).	USEPA's acceptable cancer risk management range of 10-6 to 10-4 was not exceeded for this receptor and the evaluated pathway(s). USEPA's target HI of 1 was exceeded for the hypothetical future child resident from potential exposure to antimony in surface soil. Exposure to lead in surface soil by a child may result in elevated blood lead levels above USEPA's target PbB level of 10 µg/dL.
Future Construction Worker	***Surface Soil Exposures.*** Incidental ingestion of surface soil.	USEPA's acceptable cancer risk management range of 10-6 to 10-4 was not exceeded for this receptor and the evaluated pathway(s). USEPA's target HI of 1 was exceeded for this receptor from potential exposure to antimony in surface soil. Exposure to lead in surface soil by a female construction worker may result in elevated blood lead levels in a fetus above USEPA's target PbB level of 10 µg/dL.
Skeet Range Receptors		
Current/Future On-site Indoor Worker	***Surface Soil Exposures.*** Incidental ingestion of surface soil.	USEPA's acceptable cancer risk management range of 10^{-6} to 10^{-4} was not exceeded for this receptor and the evaluated pathway(s). USEPA's target HI of 1 was not exceeded for this receptor and the evaluated pathway(s).
Current/Future On-site Outdoor Worker	***Surface Soil Exposures.*** Incidental ingestion of surface soil.	USEPA's acceptable cancer risk management range of 10^{-6} to 10^{-4} was not exceeded for this receptor and the evaluated pathway(s). USEPA's target HI of 1 was not exceeded for this receptor and the evaluated pathway(s).
Current/Future Recreational Visitor/Trespasser (adult and child)	***Surface Soil Exposures.*** Incidental ingestion of surface soil.	USEPA's acceptable cancer risk management range of 10^{-6} to 10^{-4} was not exceeded for this receptor and the evaluated pathway(s). USEPA's target HI of 1 was not exceeded for this receptor and the evaluated pathway(s).
Future Resident (adult and child)	***Surface Soil and Groundwater Exposures.*** Incidental ingestion of surface soil. Ingestion of groundwater.	USEPA's acceptable cancer risk management range of 10^{-6} to 10^{-4} was not exceeded for this receptor and the evaluated pathway(s). EPC for lead (66 µg/L) in groundwater exceeds the Federal action level for drinking water of 15 µg/L.
Future Construction Worker	***Surface Soil, Subsurface Soil and Groundwater.*** Estimated risks and HIs for all of the above exposure pathways are below 10^{-6} or 1, respectively.	USEPA's acceptable cancer risk management range of 10-6 to 10-4 was not exceeded for this receptor and the evaluated pathway(s). USEPA's target HI of 1 was not exceeded for this receptor and the evaluated pathway(s).

Notes:
BaP = benzo(a)pyrene
EPC = exposure point concentration
HI = hazard index
PbB = blood lead level
µg/dL = micrograms per deciliter
µg/L = micrograms per liter
Source: With the exception of lead, information for this table was obtained from Appendix L, Attachment L1, RAGS Part D Table 7. Information on lead was obtained from Appendix L, Attachment L4.

Table10-2
Summary of Ecological Risk Assessment for the Trap Range

Receptors	Exposure Pathways	Conservative SERA Risk Benchmarks	Step 3a Risk Benchmarks	Summary of Chemicals Exceeding Conservative SERA Risk Benchmarks Based On Maximum Detect Concentrations	Summary Chemicals Exceeding Step 3a Risk Benchmarks Based On 95% UCL or Maximum Detect Concentrations, Whichever is Lower 1
Trap Range					
Terrestrial Habitats					
Plants	***Surface Soil (0-0.5 ft bgs).*** Incidental ingestion of surface soil and contaminated forage organisms and direct contact with surface soil.	plant and soil invertebrates soil quality benchmarks (e.g. Eco-SSLs, EPA Region 5, ORNL)	plant and soil invertebrates soil quality benchmarks (e.g. Eco-SSLs, EPA Region 5, ORNL)	antimony (HQ=256), lead (HQ=656), arsenic (HQ=12), copper (HQ=2.7)	plant (antimony - HQ=42.7), lead - HQ=57)
Soil Invertebrates				antimony (HQ=16), lead (HQ=44), iron (HQ=190), arsenic (HQ=3.6), copper (HQ=2.4)	soil invertebrate (antimony - HQ=2.7), (lead - HQ=4.0)
Birds (e.g., herbivorous birds - mourning dove, omnivorous birds - horned lark, and carnivorous birds - American kestral)		bird and mammal soil quality benchmarks (e.g. Eco-SSLs, EPA Region 5)	lowest NOAEL ingestion dose TRVs for birds and mammals from EPA Eco-SSL literature. Lowest LOAEL based on NOAEL multiplied by 10.	all birds - lead (HQ=6,827), arsenic (HQ=5), copper (HQ=7.7), zinc (HQ=2.4)	unacceptable risk (NOAEL and LOAEL both have HQ>1) mourning dove (lead - HQ=28, 2.8), horned lark (lead - HQ=99,9.9) indeterminate risk (NOAEL HQ>1 and LOAEL HQ<1) American kestral (lead - HQ=1.3)
Mammals (e.g., herbivorous mammals - meadow vole, omnivorous mammals – house mouse, carnivorous mammals - mink)				all mammals - antimony (HQ=4,741), arsenic (HQ=4.7), copper (HQ=3.8), zinc (HQ=1.4)	unacceptable risk (NOAEL and LOAEL both have HQ>1) meadow vole (antimony - HQ=28, 2.8), house mouse (antimony - HQ=659, 66), house mouse (lead- HQ=43, 4.3) indeterminate risk (NOAEL HQ>1 and LOAEL HQ<1) meadow vole (lead - HQ=6.3), mink (antimony - HQ=2.9)
Plants	***Subsurface Soil (>0.5-2.0 ft bgs).*** Incidental ingestion of subsurface soil and contaminated forage organisms and direct contact with subsurface soil potentially transported to surface soil.	same as surface soil	same as surface soil	antimony (HQ=6.6), lead (HQ=23), arsenic (HQ=2.2)	plant (antimony - HQ=42.7), lead - HQ=57)
Soil Invertebrates				lead (HQ=1.6), iron (HQ=135)	soil invertebrate (antimony - HQ=2.7), (lead - HQ=4.0), both 95% UCL concentrations less the background
Birds		same as surface soil	same as surface soil	all birds - lead (HQ=250), copper (HQ=2.1)	unacceptable risk (NOAEL and LOAEL both have HQ>1) horned lark (lead - HQ=14, 1.4) indeterminate risk (NOAEL HQ>1 and LOAEL HQ<1) mourning dove (lead - HQ=3.3)
Mammals				all mammals - antimony (HQ=121), lead (HQ=49), copper (HQ=1.4)	unacceptable risk (NOAEL and LOAEL both have HQ>1) house mouse (antimony - HQ=26, 2.6) indeterminate risk (NOAEL HQ>1 and LOAEL HQ<1) meadow vole (lead - HQ=1.2), house mouse (lead 6.9)
Aquatic and Riparian/Wetlands Habitats					
Benthic Invertebrates	***Surface Sediment.*** Direct contact with benthic invertebrates living in or on the surface sediment.	sediment quality benchmarks (e.g., Minnesota Level I SQTs)	sediment quality benchmarks (e.g., Minnesota Level I and II SQTs)	SQT I - arsenic (HQ=4.1), copper (HQ=3.0), lead (HQ=1.6), acenaphthylene (HQ=19), indeno(1,2,3-cd)pyrene (HQ=1.4), benzo(a)pyrene (HQ=2.0), benzo(g,h,i)perylene (HQ=1.8), total PAHs (HQ=1.4), benz[a]anthracene (HQ=1.2), pyrene (HQ=1.2), chrysene (HQ=1.02)	SQT I HQ>1 - copper (HQ=3.2), iron (HQ=2.2), lead (HQ=1.04) SQT II HQ>1- iron (HQ=1.1), indeno(1,2,3-cd)pyrene (HQ=1.4) and benzo(g,h,i)perylene (HQ=1.8) remain because there are not SQT II benchmarks
Aquatic Organisms (e.g., aquatic plants, benthic invertebrates, and fish)	***Surface Water.*** Direct contact with aquatic organisms living in the water column	chronic standard (CS) water quality thresholds (criteria) - total recoverable, 100 mg/L total hardness (e.g., chronic Minnesota Class 2 Subparts 3a, 4a, and 5a)	chronic standard (CS) and maximum standard)+(MS) water quality thresholds (criteria) - total recoverable, 400 mg/L total hardness (e.g., chronic Minnesota Class 2 Subparts 3a, 4a, and 5a)	chronic standard (CS) criteria - unfiltered or total water samples: iron (HQ=1,813), copper (HQ=83), lead (HQ=72), arsenic (HQ=38) filtered or dissolved water samples: iron (HQ=3.4)	chronic standard (CS) criteria HQ>1- unfiltered or total water samples: iron (HQ=1,335), copper (HQ=18.5), lead (HQ=5.5), arsenic (HQ=31.6) maximum standard (MS) criteria HQ>1- unfiltered or total water samples: copper (HQ=6.5)
Aquatic Organisms (e.g., aquatic plants, benthic invertebrates, and fish)	***Groundwater.*** Potentially Discharging to Surface Water. Direct contact with aquatic organisms living in the water column at the point of discharge.			chronic standard (CS) criteria - unfiltered or total water samples: iron (HQ=65), copper (HQ=8.7), arsenic (HQ=3.0), lead (HQ=2.4), filtered or dissolved water samples: iron (HQ=95), copper (HQ=5.7), lead (HQ=1.4)	chronic standard (CS) criteria HQ>1- unfiltered or total water samples: copper (HQ=3.7), arsenic (HQ=3.0), iron (HQ=1,335) maximum standard (MS) criteria HQ>1- unfiltered or total water samples: copper (HQ=1.3), iron (HQ=1,335)
Fish	***Surface Water and Groundwater.*** Potentially Discharging to Surface Water	lowest NOAEL Critical Body Residues for fish from the scientific literature	lowest NOAEL and lowest LOAEL Critical Body Residues for fish from the scientific literature	surface water - copper (HQ=147), arsenic (HQ=17), benzo(k)fluoranthene (HQ=1.2) groundwater -benzo(k)fluoranthene (HQ=1.2)	unacceptable risk (NOAEL and LOAEL both have HQ>1) surface water: arsenic HQ=14, 4.2, copper HQ=77, 67 groundwater: copper HQ=15, 13
Birds (e.g., herbivorous and omnivorous birds - ring necked duck, carnivorous birds - belted kingfisher)	***Sediment, Surface Water or Groundwater.*** Incidental ingestion of surface sediment and contaminated forage organisms, direct contact with surface sediment, surface water and/or groundwater.	lowest NOAEL ingestion dose TRVs for birds from EPA Eco-SSL literature	lowest NOAEL ingestion dose TRVs for birds from EPA Eco-SSL literature. Lowest LOAEL based on NOAEL multiplied by 10.	sediment at wetland on the range: ring-necked duck - lead (HQ=71), copper (HQ=18) , surface water: belted kingfisher - arsenic (HQ=1.9), copper (HQ=299) , lead (HQ=1.8) groundwater: belted kingfisher - copper (HQ=31)	sediment: No NOAEL HQ>1 surface water: No NOAEL HQ>1 groundwater: No NOAEL HQ>1
Mammals (e.g., herbivorous and omnivorous mammals - muskrat, carnivorous mammals - mink)	***Sediment, Surface Water or Groundwater.*** Incidental ingestion of surface sediment and contaminated forage organisms, direct contact with surface sediment, surface water and/or groundwater.	lowest NOAEL ingestion dose TRVs for mammals from EPA Eco-SSL literature	lowest NOAEL ingestion dose TRVs for mammals from EPA Eco-SSL literature. Lowest LOAEL based on NOAEL multiplied by 10.	sediment at wetland on the range: muskrat - copper (HQ=16) lead (HQ=1.02) surface water: mink - arsenic (HQ=209), copper (HQ=157) groundwater: mink - copper (HQ=16)	sediment: No NOAEL HQ>1 surface water: No NOAEL HQ>1 groundwater: No NOAEL HQ>1

[1]- some metals, PAHs or semi volatile chemicals reported as non-detect have reporting limits that exceed SERA risk benchmarks.
Charters, D. and M. Greenberg 2004. The Rule of Five: A Novel Weight of Evidence Approach to Derive a Site Specific Cleanup Goal. Poster presented at the Society of Environmental Toxicology and Chemistry (SETAC) National Conference, Portland. OR, November 14-18, 2004.

BERA - Baseline Ecological Risk Assessment
COPEC - Chemical of Potential Ecological Concern
Eco-SSL - Ecological Soil Screening Level
EPA - Environmental Protection Agency, United States
EPC - exposure point concentration
LOAEL - Lowest-Observed-Adverse-Effect-Level
NOAEL - No-Observed-Adverse-Effect-Level
NRWQC - National Recommended Water Quality Criteria
ORNL - Oak Ridge National Laboratory
PAH - Polyaromatic Hydrocarbon
SERA - Screening-Level Ecological Risk Assessment
SQB - Soil Quality Benchmark
SQT - Sediment Quality Target
TEL - Threshold Effect Level
TRV - Toxicity Reference Value
UCL - upper confidence limit

Table 10-3
Summary of Ecological Risk Assessment for the Skeet Range

Receptors	Exposure Pathways	Conservative SERA Risk Benchmarks	Step 3a Risk Benchmarks	Summary of Chemicals Exceeding Conservative SERA Risk Benchmarks Based On Maximum Detect Concentrations	Summary Chemicals Exceeding Step 3a Risk Benchmarks Based On 95% UCL or Maximum Detect Concentrations, Whichever is Lower 1
Skeet Range					
Terrestrial Habitats					
Plants	***Surface Soil (0.0.5 ft bgs***). Incidental ingestion of surface soil and contaminated forage organisms and direct contact with surface soil.	soil quality benchmarks (e.g. Eco-SSLs, EPA Region 5, ORNL)	plant and soil invertebrates soil quality benchmarks (e.g. Eco-SSLs, EPA Region 5, ORNL)	plants - antimony (HQ=52), lead (HQ=108), copper (HQ=1.01)	plants - antimony (HQ=4.1), lead (HQ=8.6), copper (HQ=1.01)
Soil Invertebrates				soil invertebrates - antimony (HQ=3.3), lead (HQ=7.6), iron (HQ=115)	soil invertebrate - iron (HQ=115), 95% UCL concentration less the background
Birds (e.g., herbivorous birds - mourning dove, omnivorous birds - horned lark, and carnivorous birds - American kestrel)		soil quality benchmarks (e.g. Eco-SSLs, EPA Region 5)	lowest NOAEL ingestion dose TRVs for birds and mammals from EPA Eco-SSL literature. Lowest LOAEL based on NOAEL multiplied by 10.	all birds - lead (HQ=1,182), copper (HQ=2.5), zinc (HQ=1.6)	unacceptable risk (NOAEL and LOAEL both have HQ>1) horned lark (lead - HQ=19, 1.9) indeterminate risk (NOAEL HQ>1 and LOAEL HQ<1) mourning dove (lead - HQ=4.5), horned lark (copper - HQ=1.05)
Mammals (e.g., herbivorous mammals - meadow vole, omnivorous mammals – house mouse, carnivorous mammals - mink)				all mammals - antimony (HQ=959), arsenic (HQ=232), copper (HQ=1.4)	unacceptable risk (NOAEL and LOAEL both have HQ>1) house mouse (lead - HQ=63, 6.3) indeterminate risk (NOAEL HQ>1 and LOAEL HQ<1) meadow vole (antimony HQ=2.9, lead - HQ=1.2), house mouse lead - HQ=9.1, copper HQ=1.2), mink (antimony HQ=14, lead - HQ=1.98)
Plants	***Subsurface Soil (>0.5-2.0 ft bgs).*** Incidental ingestion of subsurface soil and contaminated forage organisms and direct contact with subsurface soil potentially transported to surface soil.	soil quality benchmarks (e.g. Eco-SSLs, EPA Region 5, ORNL)	same as surface soil	plants - lead (HQ=4.2)	plant (antimony - HQ=1.3)
Soil Invertebrates				soil invertebrates - iron (HQ=120)	soil invertebrate (iron - HQ=120), 95% UCL concentration less the background
Birds		soil quality benchmarks (e.g. Eco-SSLs, EPA Region 5)	same as surface soil	all birds - lead (HQ=46), copper (HQ=1.1), zinc (HQ=1.1)	unacceptable risk (NOAEL and LOAEL both have HQ>1) No NOAEL or LOAEL HQ>1 indeterminate risk (NOAEL HQ>1 and LOAEL HQ<1) horned lark(lead - HQ=3.8)
Mammals				all mammals - antimony (HQ=9.0), lead (HQ=10.3), Total HMWPAHs (HQ=5.7)	unacceptable risk (NOAEL and LOAEL both have HQ>1) No NOAEL or LOAEL HQ>1 indeterminate risk (NOAEL HQ>1 and LOAEL HQ<1) meadow vole (antimony - HQ=3.1, lead - HQ=1.9, Total HMWPAHs HQ=4.8), mink (copper HQ=1.05)
Aquatic and Riparian/Wetlands Habitats					
Benthic Invertebrates	***Surface Sediment.*** Direct contact with benthic invertebrates living in or on the surface sediment.	sediment quality benchmarks (e.g., Minnesota Level I SQTs, EPA Region 5, TELs)	sediment quality benchmarks (e.g., Minnesota Level I and II SQTs)	SQT I - Wetland on Range - lead (HQ=1.6) Wetland on South Boundary of Range - lead (HQ=8.1)	SQT I Wetland on Range - lead (HQ=1.6) Wetland on South Boundary of Range - lead (HQ=2.2) SQT II Wetland on Range - No SQT I HQ >1 Wetland on South Boundary of Range - lead (HQ=2.2)
Aquatic Organisms (e.g., aquatic plants, benthic invertebrates, and fish)	***Surface Water.*** Direct contact with aquatic organisms living in the water column	water quality thresholds (criteria) - total recoverable, 100 mg/L total hardness (e.g., chronic Minnesota Class 2 Subparts 3a, 4a, and 5a, EPA Region 5, NRWQC)	chronic standard (CS) and maximum standard (MS) water quality thresholds (criteria) - total recoverable, 400 mg/L total hardness (e.g., chronic Minnesota Class 2 Subparts 3a, 4a, and 5a)	chronic standard (CS) criteria Wetland on Range unfiltered or total water samples: lead (HQ=11), antimony (all non-detect, HQ=36.4 for maximum non-detect concentration) filtered or dissolved water samples: No detected metals HQ >1 Wetland on South Boundary of Range unfiltered or total water samples: lead (HQ=6.9) filtered or dissolved water samples: No detected metals HQ >1	chronic standard (CS) criteria and maximum standard (MS) criteria Wetland on Range unfiltered or total water samples: lead (CS HQ=2.7, MS HQ= 0.1), antimony (all non-detect CS HQ=36.4, MS HQ=2.2 for maximum non-detect concentration) filtered or dissolved water samples: No detected metals HQ >1 in SERA Wetland on South Boundary of Range unfiltered or total water samples: lead (CS HQ=1.2, MS HQ=0.05), antimony (all non-detect CS HQ=36.4, MS HQ=2.2 for maximum non-detect concentration) filtered or dissolved water samples: No detected metals HQ >1 in SERA
Aquatic Organisms (e.g., aquatic plants, benthic invertebrates, and fish)	***Groundwater.*** Potentially Discharging to Surface Water. Direct contact with aquatic organisms living in the water column at the point of discharge.			chronic standard (CS) criteria unfiltered or total water samples: lead (HQ=26.9), antimony (all non-detect, HQ=36.4 for maximum non-detect concentration) filtered or dissolved water samples: No detected metals HQ >1	unfiltered or total water samples: lead (CS HQ=4.5, MS HQ= 0.2), antimony (all non-detect CS HQ=36.4, MS HQ=2.2 for maximum non-detect concentration) filtered or dissolved water samples: No detected metals HQ >1 in SERA
Fish	**Surface Water and Groundwater.** Potentially Discharging to Surface Water	lowest NOAEL Critical Body Residues from the scientific literature	lowest NOAEL and lowest LOAEL Critical Body Residues for fish from the scientific literature	No COPECs in fish exceed an HQ of 1 from exposure to surface water and groundwater at the wetland on the range or the wetland south of the range	No SERA HQ>1
Birds (e.g., herbivorous and omnivorous birds - ring necked duck, carnivorous birds - belted kingfisher)	***Sediment, Surface Water or Groundwater.*** Incidental ingestion of surface sediment and contaminated forage organisms, direct contact with surface sediment, surface water and/or groundwater.	lowest NOAEL ingestion dose TRVs for Birds from the scientific literature	lowest NOAEL ingestion dose TRVs for birds from EPA Eco-SSL literature. Lowest LOAEL based on NOAEL multiplied by 10.	Wetland on Range sediment: ring-necked duck - lead (HQ=88) surface water: No NOAEL HQ>1 groundwater: No NOAEL HQ>1 Wetland on South Boundary of Range sediment: ring-necked duck - lead (HQ=368) surface water: No NOAEL HQ>1	Wetland on Range sediment: No SERA HQ>1 surface water: No SERA HQ>1 groundwater: No SERA HQ>1 Wetland on South Boundary of Range sediment: No SERA HQ>1 surface water: No SERA HQ>1
Mammals (e.g., herbivorous and omnivorous mammals - muskrat, carnivorous mammals - mink)	***Sediment, Surface Water or Groundwater.*** Incidental ingestion of surface sediment and contaminated forage organisms, direct contact with surface sediment, surface water and/or groundwater.	lowest NOAEL ingestion dose TRVs for mammals from the scientific literature	lowest NOAEL ingestion dose TRVs for mammals from EPA Eco-SSL literature. Lowest LOAEL based on NOAEL multiplied by 10.	Wetland on Range sediment: muskrat (HQ=1.3) surface water: No NOAEL HQ>1) groundwater: No NOAEL HQ>1 Wetland on South Boundary of Range sediment: muskrat (HQ=5.2), muskrat antimony (HQ=6.3) surface water: No NOAEL HQ>1)	Wetland on Range sediment: No SERA HQ>1)) surface water: No SERA HQ>1) groundwater: No SERA HQ>1) Wetland on South Boundary of Range sediment: No NOAEL HQ>1) surface water: No SERA HQ>1)

APPENDIX K – LUCS/ICS CHECKLIST

ANNUAL LAND USE CONTROL CHECKLIST **INSTALLATION: Duluth Air National Guard Base**

Site	Description of LUC	Action Required	Date Action Completed	Follow Up Necessary? Yes/No	Description of Follow Up Actions	Issue Resolved? Yes/No	Description of Resolution (if necessary)
All	Administrative	**Verify** that GeoBase includes an outline of all IRP Sites and Areas of Concern and indicates if Land Use Controls Exist.					
Active Sites	Annual Monitoring Well Inventory	**Verify** that annual monitoring well inventory is completed by current contractor. If no current contractor, complete annual monitoring well inventory and submit to NGB/A4VR.					
FT002 - Site FT-1 FDTA	CERCLA Required LUCs for soil and groundwater	Maintain current industrial land use and control exposures to constituents remaining in place at the site. In the event this land should pass out of the control of the DoD, CERCLA Section 120 (h) provisions will be implemented to ensure adequate LUCs/Ics are maintained.					
	AF/ANG Required LUCs for groundwater	**Verify** that groundwater is not to be used for any purpose (irrigation, etc.) other than environmental monitoring and that no production wells have been installed at the site. If land transfer occurs, **verify** that land use restrictions are communicated to the new owner by the Real Property Office. Provide a record of this communication to the ANG Restoration Program Manager.					
RW010 - Site RD-1 Low Level Radioactive Waste	AF/ANG Required LUCs for groundwater	**Verify** that groundwater is not to be used for any purpose (irrigation, etc.) other than environmental monitoring and that no production wells have been installed at the site. **Verify** that surface water use is restricted, other than for monitoring, in GeoBase. If land transfer occurs, **verify** that land use restrictions are communicated to the new owner by the Real Property Office. Provide a record of this communication to the ANG Restoration Program Manager.					
SS003 - Site S-2 DPDO Storage Area C	Interim LUCs for groundwater	**Verify** that groundwater is not to be used for any purpose (irrigation, etc.) other than environmental monitoring and that no production wells have been installed at the site. If land transfer occurs, **verify** that land use restrictions are communicated to the new owner by the Real Property Office. Provide a record of this communication to the ANG Restoration Program Manager.					
SS004 - Fuel Storage Area S-1	Interim LUCs for groundwater	**Verify** that groundwater is not to be used for any purpose (irrigation, etc.) other than environmental monitoring and that no production wells have been installed at the site. If land transfer occurs, **verify** that land use restrictions are communicated to the new owner by the Real Property Office. Provide a record of this communication to the ANG Restoration Program Manager.					
SS008 - Site S-1 Old DPDO Storage Area	AF/ANG Required LUCs for soil and groundwater	**Verify** there has been no residential construction (housing, daycares, schools, etc.) at these sites through review of construction project files, discussion with CE, and/or visiting the site. **Verify** that groundwater is not to be used for any purpose (irrigation, etc.) other than environmental monitoring and that no production wells have been installed at the site. If land transfer occurs, **verify** that land use restrictions are communicated to the new owner by the Real Property Office. Provide a record of this communication to the ANG Restoration Program Manager.					
SS017 - Base Support Storage Area S-3	AF/ANG Required LUCs for soil	**Verify** there has been no residential construction (housing, daycares, schools, etc.) at these sites through review of construction project files, discussion with CE, and/or visiting the site. If land transfer occurs, **verify** that land use restrictions are communicated to the new owner by the Real Property Office. Provide a record of this communication to the ANG Restoration Program Manager.					
SS023 - Aircraft Parking Ramp	CERCLA Required LUCs for soil and groundwater	Maintain current industrial land use and control exposures to constituents remaining in place at the site. In the event this land should pass out of the control of the DoD, CERCLA Section 120 (h) provisions will be implemented to ensure adequate LUCs/Ics are maintained.					
	AF/ANG Required LUCs for groundwater	**Verify** that groundwater is not to be used for any purpose (irrigation, etc.) other than environmental monitoring and that no production wells have been installed at the site. If land transfer occurs, **verify** that land use restrictions are communicated to the new owner by the Real Property Office. Provide a record of this communication to the ANG Restoration Program Manager.					
SS029 - Former Refueler Parking Area	Interim LUCs for groundwater	**Verify** that groundwater is not to be used for any purpose (irrigation, etc.) other than environmental monitoring and that no production wells have been installed at the site. If land transfer occurs, **verify** that land use restrictions are communicated to the new owner by the Real Property Office. Provide a record of this communication to the ANG Restoration Program Manager.					

ANNUAL LAND USE CONTROL CHECKLIST **INSTALLATION: Duluth Air National Guard Base**

Site	Description of LUC	Action Required	Date Action Completed	Follow Up Necessary? Yes/No	Description of Follow Up Actions	Issue Resolved? Yes/No	Description of Resolution (if necessary)
ST025 - Old Motor Pool Area	CERCLA Required LUCs for groundwater	**Verify** that LUCs/ICs, including construction controls and engineering controls are in place until the interim RA-O is achieved.					
	Interim LUCs for groundwater	**Verify** that groundwater is not to be used for any purpose (irrigation, etc.) other than environmental monitoring and that no production wells have been installed at the site. If land transfer occurs, **verify** that land use restrictions are communicated to the new owner by the Real Property Office. Provide a record of this communication to the ANG Restoration Program Manager.					
TS737 - Trap Range	Interim LUCs for soil	**Verify** there has been no residential construction (housing, daycares, schools, etc.) at these sites through review of construction project files, discussion with CE, and/or visiting the site. If land transfer occurs, **verify** that land use restrictions are communicated to the new owner by the Real Property Office. Provide a record of this communication to the ANG Restoration Program Manager.					
TS738 - Skeet Range	Interim LUCs for soil	**Verify** there has been no residential construction (housing, daycares, schools, etc.) at these sites through review of construction project files, discussion with CE, and/or visiting the site. If land transfer occurs, **verify** that land use restrictions are communicated to the new owner by the Real Property Office. Provide a record of this communication to the ANG Restoration Program Manager.					
WP021 - Imhoff Tank Treatment System	CERCLA Required LUCs for groundwater	**Verify** groundwater ICs, including warning signs, are posted to deter unauthorized use of the site, placing a land use restriction on the Intsallation Master Use Plan, prohibiting the use of groundwater and conducting Five-Year Reviews until the regulatory criteria are achieved.					
	Interim LUCs for groundwater	**Verify** that groundwater is not to be used for any purpose (irrigation, etc.) other than environmental monitoring and that no production wells have been installed at the site. If land transfer occurs, **verify** that land use restrictions are communicated to the new owner by the Real Property Office. Provide a record of this communication to the ANG Restoration Program Manager.					
WP022 - Building 125 and NDI Septic System	AF/ANG Required LUCs for soil	**Verify** there has been no residential construction (housing, daycares, schools, etc.) at these sites through review of construction project files, discussion with CE, and/or visiting the site. If land transfer occurs, **verify** that land use restrictions are communicated to the new owner by the Real Property Office. Provide a record of this communication to the ANG Restoration Program Manager.					

1. Five Year Review (FYR) to be completed by external source for Required LUCs only.
2. Annual inspections are to be completed by the Base EM. Will occur annually unless specified in action required column.
3. If the LUC is AF/ANG required or interim, then the use of the term LUC is not applicable to CERCLA in the formal sense but rather a best management practice. However, for practical purposes, the term LUC will be used for both connotations.
4. For site boundaries and figures refer to GeoBase data and figures provided as reference.

VIA EMAIL

William Myer (COL Ret), PG
ANG Environmental Program Manager
NGB-A4VR

RE: Review of Draft Final Five-Year Review Report for Sites 2, 3, 4, 21, 23, 25, 29, TS737, and TS738, Minnesota Air National Guard Duluth Air National Guard Base Site, Duluth Minnesota, dated February 2025
MPCA Site IDs: SR0000252, SR0000253, SR0000254, SR0000366, MND0007733, SR0000355, SR0000367

Dear William Myer:

The Minnesota Pollution Control Agency (MPCA) staff in the Superfund Program have reviewed the Draft Final Five-Year Review Report (FYR) for several sites listed above and located on the Minnesota Air National Guard (MANG) Duluth Air National Guard Base Site, Duluth, Minnesota (the Site). The FYR was prepared by BB&E, Inc. on behalf of the National Guard Bureau (NGB), the lead agency responsible for administering response actions at the Site. The MPCA, MANG, NGB, and BB&E met on April 17, 2025, to discuss MPCA's comments on the draft FYR. Following that meeting, MPCA has prepared comments:

General Comments

1. The MPCA requests clarification on why all response sites with completed remedies and contaminants remaining with concentrations of contaminants not allowing for unlimited use/unrestricted exposure (UU/UE) are not included in this FYR. For example, IRP Sites 17, 20, and 22 were included in the previous FYR, but not in this 2025 FYR. All sites with remaining contamination and not eligible of UU/UE should be identified with the status indicated. The MPCA agrees that sites with No Further Action (NFA) determinations and no requirements for active monitoring and maintenance do not need to be evaluated and discussed in depth in the Technical Assessment Section. However, documenting inspections and any issues for all sites not meeting UU/UE requirements should be included in the FYR and the status and applicable land use controls (LUCs) and institutional controls (ICs) should be included in Table 5 and Appendix K of the FYR for all sites.

2. The FYR should include a formal discussion on specific LUCs and ICs used by MANG/NGB to maintain protectiveness of response sites with completed remedies but not meeting UU/UE requirements. This discussion should include but not be limited to controls that are in place, how they are implemented and tracked, the governing authority, and how this information is made available to property owners and other stakeholders. Several tracking mechanisms used by the MANG/NGB at other sites or in the process of being developed by the MANG/NGB, including an Installation Development Plan (IDP) and electronic staff summary sheets were discussed as possibly being used for LUC/IC tracking at the FYR meeting with the MPCA and MANG/NGB on April 17, 2025. The MPCA requests more detailed information how these tracking systems could be used for implementing and documenting LUCs/ICs.

3. The FYR indicates that remedy decision documents serve as LUC/ICs by specifying the LUCs/ICs that are required for the remedies to remain protective. A formal plan or system for implementing, enforcing, and tracking LUCs/ICs for all MANG/NGB response sites on the Duluth International Airport (DIA) is needed. This plan should include a description of all LUCs/ICs and how they ensure remedy protectiveness, how they are monitored and tracked, and who has the authority to implement and enforce these controls.

Specific FYR Report Comments

1. Section I, Introduction, Site 2 Former Fire Fighting Training Areas: Also include in the background description that these areas were used for firefighting training which included the use of aqueous film-forming foam (AFFF) which is a source of per- and polyfluoroalkyl substances (PFAS) contamination released in these areas.

2. Section I, Introduction, Site 21: Include here that in addition to releases from the former Imhoff treatment systems, that releases from nearby stormwater outfalls connected to other portions of the MANG/NGB base also appear to have contributed to the identified impacts.

3. Section II, Response Actions, Site 2: Include explanation here that following issuance of an NFA for this site, new conditions and risk associated with PFAS contamination related to AFFF use at this former firefighting training area have been identified, and that this area is now being investigated as a significant source of PFAS contamination in the area. This comment also applies to Sites 21, 23, and 25 where PFAS contaminated soil and groundwater were discovered in the footprint of these areas during the 2015 PFAS Assessment and where Remedial Investigation (RI) work related to PFAS is currently being conducted by NGB.

4. Section II, Response Actions: For LUCs/ICs summary Tables 1-4:
    a) Under the Objectives column include the following: Ensure that a response action plan is prepared and approved by the MPCA/NGB/MANG for any development or construction activities that occur in this area. This would include plans for characterizing and managing any media that will be disturbed or moved.
    b) Under the last column (Title of LUCs/ICs Instruments) include the base-wide management plan.

5. Section II, Sites 21, 29, 3, and 25 Response Actions: These sections indicate that response action objectives will be considered to be attained when contaminant of concern (COC) concentrations specified in the Record of Decision (ROD) are met even though the current Minnesota health risk limits (HRLs) may be lower, specifically for trichloroethylene (TCE). The MPCA concurs with this as long as no receptors are impacted, and the area of contamination is stable and managed with no off-site migration. The MPCA may require further response actions based on current standards if conditions change that could result in impacts to receptors or the remedy no longer being protective.

6. Section IV. Five-Year Process
    a) The Report indicates the MANG/NGB has determined public notice and broader public participation is not warranted for this FYR. The MPCA recommends and requests providing this report and requesting comments from primary stakeholders that own, lease, manage, or operate on property on the DIA and project areas such as the City of Duluth, the DIA, and Cirrus Aircraft.

b) The MPCA recommends and requests that MANG/NGB prepares and implements a Community Involvement Plan related to PFAS investigations, which we acknowledge are outside of the scope of this FYR.

7. Section V. Question A, Is the Remedy Functioning as Intended by The Decision Document?
    a) For the seven response site project areas (Sites) identified (2, 3, 4, 21, 23, 25, and 29), it should be documented in this section of the report that all of these are still being actively monitored and completed remedies are still being evaluated for protectiveness.
    b) For these seven sites it should be stated that remedies are functioning as intended in the short-term. Each of these remedies are still being evaluated through long term monitoring (LTM). These sites still have COCs present above remedial action objective (RAO) concentrations and do not meet requirements for UU/UE status. Also indicate that LUCs/ICs are needed for these sites to ensure remedy protectiveness in the short-term.
    c) List the other sites with no ongoing monitoring or active operation and monitoring (O&M) requirements or NFA determinations, but that are not eligible of UU/UE and indicate that the remedies are functioning as intended for these as long as appropriate LUCs/ICs are in place so that the remedies remain protective.

8. Section V. Question B, Are exposure assumption, toxicity data, cleanup levels, and RAOs used at the time of the remedy selection still valid?
    a) Add to this section the presence of PFAS are an emerging concern that has been identified at several of the project sites and may affect other sites. Sites 2, 21, 23, and 25 are in the footprint of areas where PFAS contamination has been identified since cleanup decisions were made, and these PFAS releases are being investigated under a separate program. As discussed in the FYR meeting on April 17, protectiveness deferred determination should be made for PFAS releases for these response sites in the FYR or addendum. The FYR should include a discussion on the ongoing RI work being conducted under a separate project for these areas.
    b) The MPCA had requested a PFAS assessment be conducted for operational areas coinciding with Sites 3, 4, and 29 based on the potential for these types of contaminants to be associated with previous MANG/NGB and USAF activities in these areas and this request remains unaddressed.
    c) The RAOs for many of the sites with completed remedies are based on restoring groundwater to meet numeric Minnesota HRLs for COC concentrations. Some of the HRL values for COCs present at many of the sites, including for TCE, 1,4-dioxane, and cis 1,2 DCE for example, have decreased since the remedy decisions were made. The MPCA generally agrees that the remedies remain protective for these sites. This requires that no receptors are impacted, appropriate LUCs/ICs are in place and implemented to prevent exposure to COCs, and that the areas of contamination are defined and documented, and off-site migration does not occur.

9. Section V. Question C, Has Other Information Come to Light that could call into question the remedy?
    a) See responses to Question B.

10. Section VI. Issues and Recommendations
    a) The MPCA recommends and requests that in addition to the seven response sites included, that the FYR also identifies all of the additional inactive sites that are not eligible of UU/UE. This could be a basic list indicating the NFA status with no current monitoring or active O&M required and the LUCs/ICs that are in place to ensure protectiveness. Explain that these are tracked and documented in the IDP to ensure that no development or disturbance occurs without approved plans.
    b) Add to the report response and issues section information about the IDP which is being developed to document and track the status of all of the response sites, including both open and closed sites.
    c) Additionally, explain how the IDP can serve as a primary IC for documenting issues and restrictions related to response sites and the authority the MANG/NGB have to enforce the applicable LUCs/ICs and restrictions. Describe the authority the MANG/NGB have to control the use of properties they are leasing and to prevent lease termination? Does the MANG/NGB have the authority to require ICs and other restrictions to remain after leases are terminated under the current lease agreements?
    d) Per- and polyfluoroalkyl substances are emerging contaminants present at many of these response sites that are being investigated under a separate program. Several sites, including 3, 4, and 29 still need to be assessed for the potential presence of PFAS. The presence of PFAS at these sites could affect future O&M activities and response actions.

We look forward to continuing to the work with the National Guard Bureau and the Minnesota Air National Guard 148th Fighter Wing on completing this Five-Year Review for sites located on the Duluth Air National Guard Base. Attachment A provides disclaimers to the review. If you have any questions regarding this letter, please contact Dan Cervin, 218-302-6633, dan.cervin@state.mn.us or Mark Elliott, 218-302-6649, mark.elliott@state.mn.us.

Sincerely,

Dan Cervin

Disclaimers

Duluth Air National Guard Base

MPCA Site ID: SR0000252

1. Reservation of authorities

   The Minnesota Pollution Control Agency (MPCA) Commissioner reserves the authority to take any appropriate actions with respect to any release, threatened release, or other conditions at the Site. The MPCA Commissioner also reserves the authority to take such actions if the voluntary party does not proceed in the manner described in this letter or if actions taken or omitted by the voluntary party with respect to the Site contribute to any release or threatened release, or create an imminent and substantial danger to public health and welfare.

2. No MPCA assumption of liability

   The MPCA, its Commissioner and staff do not assume any liability for any release, threatened release or other conditions at the Site or for any actions taken or omitted by the voluntary party with regard to the release, threatened release, or other conditions at the Site, whether the actions taken or omitted are in accordance with this letter or otherwise.

3. Letter based on current information

   All statements, conclusions and representations in this letter are based upon information known to the MPCA Commissioner and staff at the time this letter was issued. The MPCA Commissioner and staff reserve the authority to modify or rescind any such statement, conclusion or representation and to take any appropriate action under her authority if the MPCA Commissioner or staff acquires information after issuance of this letter that provides a basis for such modification or action.

4. Disclaimer regarding use or development of the property

   The MPCA, its Commissioner and staff do not warrant that the Site is suitable or appropriate for any particular use.

5. Disclaimer regarding investigative or response action at the property

   Nothing in this letter is intended to authorize any response action under Minn. Stat. § 115B.17, subd. 12.

6. This approval does not supplant any applicable state or local stormwater permits, ordinances, or other regulatory documents.

RE: Response to Comments on the *Draft Final Five-Year Review Report for Duluth Air National Guard Base – IRP Sites 2, 3, 4, 21, 23, 25, 29, TS737, and TS738*

Dear Mr. Cervin,

On behalf of the Air National Guard (ANG), BB&E, Inc. (BB&E) is providing this letter in response to the Minnesota Pollution Control Agency (MPCA) comments on the Draft Final Five-Year Review (FYR) Report for Duluth Air National Guard Base, Installation Restoration Program Sites 2, 3, 4, 21, 23, 25, 29, TS737, and TS738. This letter addresses the 13 comments included in the May 29, 2025, MPCA letter. A red-line strike out version of the FYR Report has been prepared to track changes to the document based on MPCA's comments, along with the (clean) Final FYR Report.

MPCA General Comment 1:

The MPCA requests clarification on why all response sites with completed remedies and contaminants remaining with concentrations of contaminants not allowing for unlimited use/unrestricted exposure (UU/UE) are not included in this FYR. For example, Installation Restoration Program (IRP) Sites 17, 20, and 22 were included in the previous FYR, but not in this 2025 FYR. All sites with remaining contamination and not eligible of UU/UE should be identified with the status indicated. The MPCA agrees that sites with No Further Action (NFA) determinations and no requirements for active monitoring and maintenance do not need to be evaluated and discussed in depth in the Technical Assessment Section. However, documenting inspections and any issues for all sites not meeting UU/UE requirements should be included in the FYR, and the status and applicable land use controls (LUCs) and institutional controls (ICs) should be included in Table 5 and Appendix K of the FYR for all sites.

BB&E Response to General Comment 1:

As discussed during the April 17, 2025 meeting, following a legal review of the ANG's LUC and FYR program, an internal ANG policy document was developed dated 13 October 2020 which detailed a change in how LUCs are managed when a site is closed, and does not meet UU/UE requirements, but does not have LUCs/ICs specified in the Record of Decision (ROD; BB&E 2020). This policy change led to Sites 17, 20, and 22 being excluded from this FYR Report. Site 17 and Site 22 are still tracked by the ANG as having "Air Force/ANG required LUCs" (not Comprehensive Environmental Response, Compensation, and Liability Act [CERCLA]-required LUCs); Site 20 is no longer being tracked as having LUCs based on the updated policy (BB&E 2020). A copy of the latest completed Annual LUCs Checklist is included as **Attachment 1** to this response to comment letter for reference purposes. The version of the checklist included as an appendix to the FYR will remain the same. Sites that are not eligible for UU/UE, that are not included in this FYR, still have LUCs/ICs that are managed

internally by the ANG; how those LUCs/ICs are tracked/managed by the ANG was discussed with MPCA during the April 17, 2025 meeting and initial Duluth FYR meeting, and is also described further below.

MPCA General Comment 2:

The FYR should include a formal discussion on specific LUCs and ICs used by MANG/NGB to maintain protectiveness of response sites with completed remedies but not meeting UU/UE requirements. This discussion should include but not be limited to controls that are in place, how they are implemented and tracked, the governing authority, and how this information is made available to property owners and other stakeholders. Several tracking mechanisms used by the MANG/NGB at other sites or in the process of being developed by the MANG/NGB, including an Installation Development Plan (IDP) and electronic staff summary sheets were discussed as possibly being used for LUC/IC tracking at the FYR meeting with the MPCA and MANG/NGB on April 17, 2025. The MPCA requests more detailed information on how these tracking systems could be used for implementing and documenting LUCs/ICs.

BB&E Response to General Comment 2:

As described during the April 17, 2025 meeting and below, LUCs/ICs are managed properly by the ANG utilizing multiple tools. In the event of a property transfer/potential land development, LUCs/ICs are also properly communicated to the property owner and/or other stakeholders. Tools utilized by the ANG for tracking/managing LUCs/ICs include, but are not limited to the following:

- ANG's Geographic Information System (GIS) system (GeoBase): GeoBase can be used to depict IRP site boundaries and the associated LUC/IC description, as applicable.
- Enterprise Environmental Safety and Occupational Health – Management Information System (EESOH-MIS): EESOH-MIS is a web-based information system used by the Air Force/ANG to collect and track environmental data. It is used to track hazardous waste, hazardous materials, air quality, and in this case, environmental liabilities/cleanup data and information for the Environmental Restoration Program (ERP) including LUCs/ICs at sites. EESOH-MIS is required to be updated routinely/frequently to ensure information is up to date/accurate, including updating the LUCs/ICs information on an annual basis, at a minimum.
- Annual LUCs/ICs Tracking/Checklist: LUCs/ICs are inspected/maintained on an annual basis via completion of the Annual LUCs/ICs Checklist. To ensure accountability at the base level, the annual LUCs/ICs checklist, when prepared (and/or updated) is transmitted from NGB to the Base via an electronic Staff Summary Sheet (eSSS). The eSSS is an electronic document used in the Air Force/ANG for coordinating and tracking staff packages, and includes key elements like coordination, identification, and a summary, ensuring that the information and requirements are reviewed and signed off on by the appropriate personnel at the base. In the instance of the LUCs/ICs eSSS, the package is routed up to the Base Civil Engineer (BCE) level.
- Installation Development Plans (IDPs): IDPs are developed/prepared for bases to support on-installation planning decisions and align strategic, operational, and tactical requirements with mission support requirements while considering other constraints such

as natural resources, incompatible land uses, etc. IDPs are often used by the Air Force/ANG to ensure the appropriate personnel at the Base are informed of any land use restrictions (e.g., areas that may have LUCs/ICs in place).

- FYRs: FYRs are used as a component under CERCLA to evaluate the status of LUCs/ICs at sites where a site did not meet UU/UE criteria and LUCs/ICs were identified in the ROD. The FYR process is utilized for sites with LUCs/ICs to ensure that cleanup actions at sites are still effective and continue to protect human health and the environment.

All of the above tools are used across the ANG for tracking/maintaining LUCs/ICs. The IDP is still in the process of being updated to include the LUCs/ICs for the sites at Duluth; BB&E will continue working with the ANG regarding incorporation of the LUCs/ICs into the IDP.

This information has been further elaborated on in the revised FYR Report.

MPCA General Comment 3:

The FYR indicates that remedy decision documents serve as LUC/ICs by specifying the LUCs/ICs that are required for the remedies to remain protective. A formal plan or system for implementing, enforcing, and tracking LUCs/ICs for all MANG/NGB response sites on the Duluth International Airport (DIA) is needed. This plan should include a description of all LUCs/ICs and how they ensure remedy protectiveness, how they are monitored and tracked, and who has the authority to implement and enforce these controls.

BB&E Response to General Comment 3:

The recommendations section of the FYR includes a recommendation for the development of a Land Use Control Implementation Plan (LUCIP) to include additional information for communicating LUCs/ICs to property owners and/or tenants of land not owned and/or controlled by the Department of Defense. The LUCs/ICs at the Base are currently being managed in accordance with the responses provided for General Comment 1 and General Comment 2.

MPCA Specific Comment 1:

Section I, Introduction, Site 2 Former Fire Fighting Training Areas: Also include in the background description that these areas were used for firefighting training which included the use of aqueous film-forming foam (AFFF) which is a source of per- and polyfluoroalkyl substances (PFAS) contamination released in these areas.

BB&E Response to Specific Comment 1:

The text for Site 2 in Section I has been revised to indicate that PFAS contamination within the footprint of Site 2 is being investigated as Site AT028, and therefore, PFAS within the footprint of Site 2 will not be addressed further in the FYR.

MPCA Specific Comment 2:

Section I, Introduction, Site 21: Include here that in addition to releases from the former Imhoff treatment systems, that releases from nearby stormwater outfalls connected to other portions of the MANG/NGB base also appear to have contributed to the identified impacts.

BB&E Response to Specific Comment 2:

The text currently states in Section I for Site 21"It appeared there were multiple small releases near Building 252 or a release of diluted dissolved-phase contamination from a stormwater outfall at the former Imhoff tank treatment system". The ROD and recent groundwater monitoring reports were reviewed to confirm the conceptual site model; these documents indicate that the only outfall that may be a potential source is the outfall at the Imhoff tank treatment system. Therefore, no revision is required, as BB&E does not currently have data/information to further support the statement.

MPCA Specific Comment 3:

Section II, Response Actions, Site 2: Include explanation here that following issuance of an NFA for this site, new conditions and risk associated with PFAS contamination related to AFFF use at this former firefighting training area have been identified, and that this area is now being investigated as a significant source of PFAS contamination in the area. This comment also applies to Sites 21, 23, and 25 where PFAS contaminated soil and groundwater were discovered in the footprint of these areas during the 2015 PFAS Assessment and where Remedial Investigation (RI) work related to PFAS is currently being conducted by NGB.

BB&E Response to Specific Comment 3:

The text for Site 2 in Section I has been revised per MPCA Specific Comment 1. Since PFAS is being investigated as a separate site, AT028, and Site 2 has not been reopened for PFAS, further discussion of PFAS in relation to Site 2 will not be included as part of the FYR.

Information regarding reopening Site 23 to address PFAS is addressed in Question C of Section V.

Question C of Section V states that any commingled PFAS and IRP sites included in this FYR will be addressed upon completion of the RI in the next FYR. Due to the RI not being complete, the aforementioned sites (Sites 2, 21, 23, and 25) are not fully addressed in this FYR as no risk assessment has been completed for PFAS. For these reasons, Section II will not be revised at this time; these sites will be re-evaluated during the next FYR.

MPCA Specific Comment 4:

Section II, Response Actions: For LUCs/ICs summary Tables 1-4:

a) Under the Objectives column include the following: Ensure that a response action plan is prepared and approved by the MPCA/NGB/MANG for any development or construction activities that occur in this area. This would include plans for characterizing and managing any media that will be disturbed or moved.

b) Under the last column (Title of LUCs/ICs Instruments) include the base-wide management plan.

BB&E Response to Specific Comment 4:

a) The LUCs/ICs objectives column for in-text Tables 1-4 list the specific LUCs/ICs that apply to the media, and the language is directly from the respective ROD or Decision Document (DD). No revision is required. This requested information (i.e., preparation of a response

action plan prior to development/construction activities) will be incorporated into the recommended LUCIP, which would become the LUCs/ICs instrument; as described above, the recommendations section has been updated with the recommendation to develop a LUCIP for the base, subject to the availability of funds.

b) Once LUCs/ICs have been incorporated into the IDP and/or a LUCIP, those documents will be added to the last column (Title of LUCs/ICs Instrument Implemented). No revision is required at this time.

MPCA Specific Comment 5:

Section II, Sites 21, 29, 3, and 25 Response Actions: These sections indicate that response action objectives will be considered to be attained when contaminant of concern (COC) concentrations specified in the Record of Decision (ROD) are met even though the current Minnesota health risk limits (HRLs) may be lower, specifically for trichloroethylene (TCE). The MPCA concurs with this as long as no receptors are impacted, and the area of contamination is stable and managed with no off-site migration. The MPCA may require further response actions based on current standards if conditions change that could result in impacts to receptors or the remedy no longer being protective.

BB&E Response to Specific Comment 5:

Comment acknowledged. The FYR Report acknowledges that criteria for certain COCs have been revised after implementation of the ROD; specifically, the current Minnesota Department of Health (MDH) criterion for TCE is 0.4 micrograms per liter (µg/L), and the MDH criterion at the time of the ROD documents was 5 µg/L. The MPCA will continue to be involved in the ANG's execution of the ERP, including when sites are proposed for site closeout; the need for further actions can be evaluated at that time. No change to the FYR Report.

MPCA Specific Comment 6:

Section IV. Five-Year Process

a) The Report indicates the MANG/NGB has determined public notice and broader public participation is not warranted for this FYR. The MPCA recommends and requests providing this report and requesting comments from primary stakeholders that own, lease, manage, or operate on property on the DIA and project areas such as the City of Duluth, the DIA, and Cirrus Aircraft.

b) The MPCA recommends and requests that MANG/NGB prepares and implements a Community Involvement Plan related to PFAS investigations, which we acknowledge are outside of the scope of this FYR.

BB&E Response to Specific Comment 6:

a) The ANG will provide a copy of the FYR to the property owner, the Duluth Airport Authority (DAA), for DAA to provide to appropriate tenants (e.g., Cirrus Aircraft). Regarding broader public participation, as described in the FYR Report, this FYR and other investigation documents can be viewed online in the Administrative Record or at the Information Repository. If additional Proposed Plans or DDs are drafted for these sites, the ANG will solicit public comments. No change to the FYR Report.

b) Comment acknowledged. PFAS investigations are discussed in the 2022 Community Involvement Plan prepared by Jacobs. Under CERCLA, CIPs are typically updated every five to seven years; the ANG is currently working to update CIPs every two years. PFAS will be handled in the same manner as other constituents of concern in future CIP documents. No change to the FYR Report.

MPCA Specific Comment 7:

Section V. Question A, Is the Remedy Functioning as Intended by The Decision Document?

a) For the seven response site project areas (Sites) identified (2, 3, 4, 21, 23, 25, and 29), it should be documented in this section of the report that all of these are still being actively monitored and completed remedies are still being evaluated for protectiveness.

b) For these seven sites it should be stated that remedies are functioning as intended in the short term. Each of these remedies are still being evaluated through long term monitoring (LTM). These sites still have COCs present above remedial action objective (RAO) concentrations and do not meet requirements for UU/UE status. Also indicate that LUCs/ICs are needed for these sites to ensure remedy protectiveness in the short term.

c) List the other sites with no ongoing monitoring or active operation and monitoring (O&M) requirements or NFA determinations, but that are not eligible of UU/UE and indicate that the remedies are functioning as intended for these as long as appropriate LUCs/ICs are in place so that the remedies remain protective.

BB&E Response to Specific Comment 7:

a) The text has been revised to indicate that Sites 3, 4, 21, 25, and 29 are being actively monitored to evaluate protectiveness and progress towards achieving RAOs. Due to Site 23 being reopened, there is an ongoing investigation to determine the nature and extent of PFAS at the site.

b) The text has been revised to indicate the remedies are functioning as intended and documented in the RODs, so long as LUCs/ICs remain in place until the sites meet the requirements for UU/UE status or are closed with LUCs/ICs.

c) As stated in the response to General Comment 1, other sites that are not eligible for UU/UE and have not been included in this FYR will not be included in the document as their RODs did not specify LUCs/ICs. For sites where "informal" (i.e., Air Force/ANG required) LUCs/ICs are in place, these sites are still tracked and managed as described above in response to response to general comment 1 and general comment 2; however, they have not been added to the FYR report. No change to the FYR Report.

MPCA Specific Comment 8:

Section V. Question B, Are exposure assumption, toxicity data, cleanup levels, and RAOs used at the time of the remedy selection still valid?

a) Add to this section the presence of PFAS are an emerging concern that has been identified at several of the project sites and may affect other sites. Sites 2, 21, 23, and 25 are in the footprint of areas where PFAS contamination has been identified since cleanup decisions

were made, and these PFAS releases are being investigated under a separate program. As discussed in the FYR meeting on April 17, protectiveness deferred determination should be made for PFAS releases for these response sites in the FYR or addendum. The FYR should include a discussion on the ongoing RI work being conducted under a separate project for these areas.

b) The MPCA had requested a PFAS assessment be conducted for operational areas coinciding with Sites 3, 4, and 29 based on the potential for these types of contaminants to be associated with previous MANG/NGB and USAF activities in these areas and this request remains unaddressed.

c) The RAOs for many of the sites with completed remedies are based on restoring groundwater to meet numeric Minnesota HRLs for COC concentrations. Some of the HRL values for COCs present at many of the sites, including for TCE, 1,4-dioxane, and cis 1,2 DCE for example, have decreased since the remedy decisions were made. The MPCA generally agrees that the remedies remain protective for these sites. This requires that no receptors are impacted, appropriate LUCs/ICs are in place and implemented to prevent exposure to COCs, and that the areas of contamination are defined and documented, and off-site migration does not occur.

BB&E Response to Specific Comment 8:

a) Per Department of Air Force Guidance, only compounds included in the ROD or DD for the sites are to be discussed in Question B. Since PFAS are not listed as a constituent of concern in the ROD/DD for any of the sites, PFAS are addressed in Question C. While PFAS have been identified within the footprints of the sites, the RI is ongoing, and risks related to PFAS have not been determined. If unacceptable risk is determined to be present at the sites following the RI, and response actions are deemed necessary, then PFAS may be included as part of the new PFAS IRP site. It is anticipated that these determinations will be made prior to the next FYR, and as such, additional PFAS evaluation and discussion will be included in the next FYR. A protectiveness deferred determination due to PFAS releases was (and is) included in the FYR Report for Site 23, with a FYR Addendum planned for 2028. No change to the FYR Report.

b) While Sites 3, 4, and 29 are not included for investigation for Phase I RI activities at the base, a Phase II RI will likely be completed and may incorporate these sites. In addition, a Non-Aqueous Film Forming Foam PFAS Due Diligence effort is ongoing at the Base. The Due Diligence effort is comparable to a CERCLA Preliminary Assessment. Sites identified during the Due Diligence effort for further investigation will continue through the CERCLA process. The Non-AFFF PFAS Due Diligence report included evaluation of the requested three sites (Sites 3, 4, and 29) for potential release of non-AFFF PFAS sources as the evaluation is base-wide effort.

c) Comment acknowledged. The FYR Report acknowledges that criteria for certain COCs have been revised after implementation of the ROD (e.g., TCE). The MPCA will continue to be involved in the ANG's execution of the ERP, including when sites are proposed for site closeout; the need for further actions can be evaluated at that time (e.g., to ensure

appropriate LUCs/ICs are in place and implemented to prevent exposure to COCs, etc.), and off-site migration does not occur. No change to the FYR Report.

MPCA Specific Comment 9:

Section V. Question C, Has Other Information Come to Light that could call into question the remedy?

a) See responses to Question B.

BB&E Response to Specific Comment 9:

See above responses for MPCA Specific Comment 8.

MPCA Specific Comment 10:

Section VI. Issues and Recommendations

a) The MPCA recommends and requests that in addition to the seven response sites included, the FYR also identifies all of the additional inactive sites that are not eligible of UU/UE. This could be a basic list indicating the NFA status with no current monitoring or active O&M required and the LUCs/ICs that are in place to ensure protectiveness. Explain that these are tracked and documented in the IDP to ensure that no development or disturbance occurs without approved plans.

b) Add to the report response and issues section information about the IDP which is being developed to document and track the status of all of the response sites, including both open and closed sites.

c) Additionally, explain how the IDP can serve as a primary IC for documenting issues and restrictions related to response sites and the authority the MANG/NGB have to enforce the applicable LUCs/ICs and restrictions. Describe the authority the MANG/NGB have to control the use of properties they are leasing and to prevent lease termination? Does the MANG/NGB have the authority to require ICs and other restrictions to remain after leases are terminated under the current lease agreements?

d) Per- and polyfluoroalkyl substances are emerging contaminants present at many of these response sites that are being investigated under a separate program. Several sites, including 3, 4, and 29 still need to be assessed for the potential presence of PFAS. The presence of PFAS at these sites could affect future O&M activities and response actions.

BB&E Response to Specific Comment 10:

a) See response to General Comment 1 regarding sites not eligible for UU/UE that are not included as part of this FYR.

b) The incorporation of LUCs/ICs into the IDP has not yet been completed, and BB&E is coordinating with ANG for incorporating the LUCs/ICs into the IDP for the next FYR. The FYR currently recommends the preparation of a LUCIP, that may be able to be developed prior to or in lieu of the addition of LUCs/ICs into the IDP. The following was added to the Recommendations Section of the FYR Report: “In addition to the LUC Implementation Plan, it is recommended that the ANG update the IDP to include sites with LUCs/ICs, and that the

ANG's GIS system (GeoBase) continue to be updated/maintained along with other tracking tools (e.g., EESOH-MIS, completion of the Annual LUCs/ICs checklist, etc.)."

c) As indicated during the April 17, 2025 meeting, internal procedures are in place if land transfers occur to notify the current property owner/future property owner. The Minnesota Air National Guard/National Guard Bureau (MANG/NGB) does not have the authority to control the use of properties they are leasing in a "formal" means (i.e., adding a formal restriction such as a Restrictive Covenant/Deed Restriction); however, upon lease termination and transfer, LUCs/ICs will be coordinated with property owners at that time, and may include more formal restrictions if the property owner is amenable. More "informal" means for controlling the property are described above (e.g., completion of the LUCs/ICs inspections by ANG, EESOH-MIS LUC tracking, etc.).

   Further, the MANG/NGB does not have the authority to require LUCs/ICs and other restrictions to remain after leases are terminated; however, similar to the above scenario, the MANG/NGB will work with the different parties to put in place more formal restrictions due to the residual contamination (e.g., a Restrictive Covenant/Deed Restriction), and/or some other sort of agreement that would describe that the land transfer is happening with residual contamination in place and what the expectations are (e.g., ANG can continue accessing the property for LTM, completion of Five Year Reviews, etc.), and/or other steps that may need to be taken to prevent exposure (e.g., installation of a pre-emptive Vapor Barrier). As discussed with MPCA during the April 17, 2025 meeting, these conversations are currently on-going with DAA, Cirrus, and the MANG/NGB as it relates to the anticipated land transfer for Site 4 and Site 29; any requirements will be formally documented in required real property documentation (e.g., if ANG has to maintain access to the property) and/or others (e.g., a Deed Restriction, LUCIP, etc.).

d) See response to Specific Comment 8b, above. While Sites 3, 4, and 29 are not included for investigation for Phase I RI activities at the base, a Phase II RI will likely be completed and may incorporate these sites. In addition, a Non-Aqueous Film Forming Foam PFAS Due Diligence effort is ongoing at the Base. The Due Diligence effort is comparable to a CERCLA Preliminary Assessment. Sites identified during the Due Diligence effort for further investigation will continue through the CERCLA process. The MPCA will receive a copy of the document for review.

Attachment 1

Completed LUCs/ICs Checklist

ANNUAL LAND USE CONTROL CHECKLIST **INSTALLATION: Duluth Air National Guard Base**

Site	Description of LUC	Action Required	Date Action Completed	Follow Up Necessary? Yes/No	Description of Follow Up Actions	Issue Resolved? Yes/No	Description of Resolution (if necessary)
All	Administrative	**Verify** that GeoBase includes an outline of all IRP Sites and Areas of Concern and indicates if Land Use Controls Exist.	-	Yes	ERP layer exists, but need	Yes/No	
Active Sites	Annual Monitoring Well Inventory	**Verify** that annual monitoring well inventory is completed by current contractor. If no current contractor, complete annual monitoring well inventory and submit to NGB/A4VR.	-	Yes	New contract for Sites	Yes/No	
FT002 - Site FT-1 FDTA	Required LUCs for groundwater	**Verify** that Institutional controls (ICs) are in place to maintain the current land use and control exposures to consituents remaining in place at the site. **Verify** the Base Master Plan includes adequate land use controls. If land transfer occurs, **verify** that CERCLA Section 120 (h) provisions are implemented to ensure adequate ICs are maintained and that land use restrictions are communicated to the new owner by the Real Property Office. Provide a record of this communication to the ANG Restoration Program Manager.	09/06/2024	No		Yes/No	
RW010 - Site RD-1 Low Level Radioactive Waste	AF/ANG Required LUCs for groundwater	**Verify** that groundwater is not to be used for any purpose (irrigation, etc.) other than environmental monitoring and that no production wells have been installed at the site. **Verify** that surface water use is restricted, other than for monitoring, in GeoBase. If land transfer occurs, **verify** that land use restrictions are communicated to the new owner by the Real Property Office. Provide a record of this communication to the ANG Restoration Program Manager.	09/06/2024	Yes	- LUCs in GeoBase need to be confirmed. - Groundwater is not used	Yes/No	
SS003 - Site S-2 DPDO Storage Area C	Interim LUCs for groundwater	**Verify** that groundwater is not to be used for any purpose (irrigation, etc.) other than environmental monitoring and that no production wells have been installed at the site. If land transfer occurs, **verify** that land use restrictions are communicated to the new owner by the Real Property Office. Provide a record of this communication to the ANG Restoration Program Manager.	09/06/2024	No		Yes/No	
SS004 - Fuel Storage Area S-1	Interim LUCs for groundwater	**Verify** that groundwater is not to be used for any purpose (irrigation, etc.) other than environmental monitoring and that no production wells have been installed at the site. If land transfer occurs, **verify** that land use restrictions are communicated to the new owner by the Real Property Office. Provide a record of this communication to the ANG Restoration Program Manager.	09/06/2024	No		Yes/No	
SS008 - Site S-1 Old DPDO Storage Area	AF/ANG Required LUCs for soil and groundwater	**Verify** there has been no residential construction (housing, daycares, schools, etc.) at these sites through review of construction project files, discussion with CE, and/or visiting the site. **Verify** that groundwater is not to be used for any purpose (irrigation, etc.) other than environmental monitoring and that no production wells have been installed at the site. If land transfer occurs, **verify** that land use restrictions are communicated to the new owner by the Real Property Office. Provide a record of this communication to the ANG Restoration Program Manager.	09/06/2024	No		Yes/No	
SS017 - Base Support Storage Area S-3	AF/ANG Required LUCs for soil	**Verify** there has been no residential construction (housing, daycares, schools, etc.) at these sites through review of construction project files, discussion with CE, and/or visiting the site. If land transfer occurs, **verify** that land use restrictions are communicated to the new owner by the Real Property Office. If land transfer occurs, **verify** that land use restrictions are communicated to the new owner by the Real Property Office. Provide a record of this communication to the ANG Restoration Program Manager.	09/06/2024	No		Yes/No	

1. Five Year Review (FYR) to be completed by external source for Required LUCs only.
2. Annual inspections are to be completed by the Base EM. Will occur annually unless specified in action required column.
3. If the LUC is AF/ANG required, then the use of the term LUC is not applicable to CERCLA in the formal sense but rather a best management practice. However, for practical purposes, the term LUC will be used for both connotations.
4. For site boundaries and figures refer to GeoBase data and figures provided as reference.

RE: Review of Response to Comments on the Draft Final Five-Year Review Report for IRP Sites 2, 3, 4, 21, 23, 25, 29, TS737, and TS738, Minnesota Air National Guard Duluth Air National Guard Base Site, Duluth, Minnesota, dated July 3, 2025
MPCA Site IDs: SR0000252, SR0000253, SR0000254, SR0000366, MND0007733, SR0000355, SR0000367

Dear William Myer:

The Minnesota Pollution Control Agency (MPCA) staff in the Superfund Program have reviewed the above-referenced Response to Comments (RTC) Letter and revised Draft Final Five-Year Review Report (FYR) dated July 2, 2025, for several sites listed above and located on the Minnesota Air National Guard (MANG) Duluth Air National Guard (DANG) Base Site, Duluth, Minnesota.

The FYR and RTC were prepared by BB&E, Inc. on behalf of the National Guard Bureau (NGB), the lead agency responsible for administering response actions at the DANG and MANG. The MPCA, MANG, NGB, and BB&E met on April 17, 2025, to discuss the MPCA's comments on the initial draft FYR. Following that meeting, the MPCA prepared comments on the FYR in a letter addressed to the NGB-A4VR dated May 29, 2025.

This letter is written in response to the revised FYR and RTC submitted to the MPCA on July 2, 2025. The MPCA appreciates the response to our comments and the corresponding revisions and additional information added to the draft FYR. In accordance with our review of these documents, the MPCA agrees the Draft FYR should be completed as final with the changes presented in the revised Draft FYR and contingent on including the MPCA's May 29, 2025 comment letter and the ANG Response to comments as attachments to the FYR.

Some additional requests from the MPCA regarding how the status and restrictions for active and closed installation restoration program (IRP) sites are managed and tracked are presented below:

- As indicated in the recommendations section of the RTC, the MPCA requests the ANG/MANG prepare and begin implementing a Land Use Control and Implementation Plan (LUCIP) within the next year (or by June 30, 2026). This plan should identify all active and inactive IRP sites and should provide a plan for tracking information on their status and condition.

  This plan should include a description of all land use controls (LUCs) and institutional controls (ICs) and how they ensure remedy protectiveness, how they are monitored and tracked, and who has the authority to implement and enforce these controls and how this information is made available to property owners and other stakeholders. The MPCA requests the opportunity to review and comment on the LUCIP. This plan must identify how all LUC/ICs are implemented and enforced by the ANG and property owners.

- The LUCIP should include a system for tracking and documenting the status and condition of all IRP sites on the DANG, including inactive and closed sites as proposed in the BB&E response to MPCA Comment #2 (Response to Comments, 7/2/2025). Several tracking mechanisms used by the MANG/NGB at other sites or in the process of being developed by the MANG/NGB, including an Installation Development Plan (IDP) and electronic staff summary sheets were discussed as possibly being used for LUC/IC tracking at the FYR meeting with the MPCA and MANG/NGB on April 17, 2025.

  The MPCA requests the tracking system should include:

  - Identification of all active and inactive and closed IRP sites even if no ICs or LUCs were required by the Record of Decision.
  - A description of any restrictions needed for each site.
  - Annual updates with site inspections results and a summary of the status and condition of each site.
  - Corrective action needs identified for each site.

This information should be incorporated in the tracking tools proposed to be used by the ANG in the RTC letter.

We look forward to continuing to work with the NGB and the MANG 148th Fighter Wing on the implementation of the recommendations from the Five-Year Review. Attachment A provides disclaimers to the review. If you have any questions regarding this letter, please contact Dan Cervin, 218-302-6633, dan.cervin@state.mn.us or Mark Elliott, 218-302-6649, mark.elliott@state.mn.us.

Sincerely,

Dan Cervin

Disclaimers

Duluth Air National Guard Base

MPCA Site ID: SR0000252

1. Reservation of authorities

   The Minnesota Pollution Control Agency (MPCA) Commissioner reserves the authority to take any appropriate actions with respect to any release, threatened release, or other conditions at the Site. The MPCA Commissioner also reserves the authority to take such actions if the voluntary party does not proceed in the manner described in this letter or if actions taken or omitted by the voluntary party with respect to the Site contribute to any release or threatened release, or create an imminent and substantial danger to public health and welfare.

2. No MPCA assumption of liability

   The MPCA, its Commissioner and staff do not assume any liability for any release, threatened release or other conditions at the Site or for any actions taken or omitted by the voluntary party with regard to the release, threatened release, or other conditions at the Site, whether the actions taken or omitted are in accordance with this letter or otherwise.

3. Letter based on current information

   All statements, conclusions and representations in this letter are based upon information known to the MPCA Commissioner and staff at the time this letter was issued. The MPCA Commissioner and staff reserve the authority to modify or rescind any such statement, conclusion or representation and to take any appropriate action under her authority if the MPCA Commissioner or staff acquires information after issuance of this letter that provides a basis for such modification or action.

4. Disclaimer regarding use or development of the property

   The MPCA, its Commissioner and staff do not warrant that the Site is suitable or appropriate for any particular use.

5. Disclaimer regarding investigative or response action at the property

   Nothing in this letter is intended to authorize any response action under Minn. Stat. § 115B.17, subd. 12.

6. This approval does not supplant any applicable state or local stormwater permits, ordinances, or other regulatory documents.

Qualifications of the Environmental Personnel

KERI AUFDENCAMP

SENIOR PROJECT SCIENTIST

Ms. Aufdencamp is a senior project scientist who has managed Phase I and II ESAs and construction monitoring projects for MnDOT's Office of Environmental Stewardship, Metropolitan Council, Municipalities, and private clients. She has assisted clients with due diligence from early design planning stages through construction to secure regulatory approvals.

24 years

OF EXPERIENCE

EXPERIENCE

SP 6982-353 Fiber Optic Installation (Minnesota Department of Transportation) – Duluth, MN

Project manager for the Phase I ESA and Phase II ESA. The project extends from the Lief Erickson tunnel to the end of I-35 at 26th Avenue East in Duluth, Minnesota. MnDOT plans to complete fiber optic installation along the Project alignment. The Phase I ESA identified twelve high, forty medium, and fifteen low rank sites along the Project corridor.

River to River Greenway Trail Connections & Robert Street Underpass (Dakota County) – West Saint Paul, MN

Senior level review of the Phase I ESA and assisted with the Phase II ESA. The project is located between CSAH 6 (Thompson Avenue) and CSAH 8 (East Wentworth Avenue) in the City of West. St. Paul. SEH assisted Dakota County with final design of 0.65 mile greenway through a busy commercial district in West St. Paul that includes a 16 ft. wide by 10 ft. high concrete box culvert under Robert Street. Project involves significant agency coordination with MnDOT, County, City and private property owners and local businesses.

I-29/85th Street Environmental Assessment (85th Street Owner's Joint Venture) – Sioux Falls, SD

Senior level review of the Phase I ESA. The project will consist of a new interchange at 85th Street in Lincoln County with a braided exit ramp for WB I-229 to SB I-29 exiting traffic. This project includes two new bridge structures, drainage design, wetland mitigation, signals, lighting, and permitting. This project will be let through the SDDOT. The project also includes work with the City of Sioux Falls, City of Tea and Lincoln County.

Green Line Extension also known as the Southwest LRT Construction Monitoring (Metropolitan Council Metro Transit) – Eden Prairie, Minnetonka, Hopkins, Saint Louis Park, and Minneapolis, MN

Project Manager for contaminated materials construction monitoring oversight (Response Action Plan Implementation). Responsible for coordination, field oversight for proper management of contaminated materials and Response Action Plan Implementation Reports, Tank Excavation Worksheets, etc. for contaminated materials encountered on the 14.5-mile transit corridor.

TH 36 St. Croix River Crossing (Minnesota Department of Transportation) – Stillwater, MN

MnDOT project manager responsible for managing Phase I and II ESA, RAP development, contract special provisions, construction monitoring and liability assurance work; contracting environmental consultants; and overseeing cleanup during construction of a 5,070-foot bridge. Project work included work in Wisconsin.

Executive Summary

Phase II Environmental Investigation

Short Elliott Hendrickson Inc. (SEH®) was retained by the Duluth Airport Authority (DAA) to conduct a Phase II Environmental Investigation for the Taxiway A Reconstruction - Phase 7 project located at the Duluth International Airport (DLH) in Duluth, St. Louis County, Minnesota (herein referred to as "Site"). The Site location is depicted on **Figure 1**.

Taxiway A is the parallel taxiway for the main runway (Runway 9/27) serving the DLH. The existing Taxiway A is approximately 10,700 feet in length and the reconstruction is proposed to be completed in nine phases, based on the result of the 2021 DLH Airport Master Plan and discussions with the DAA and Federal Aviation Administration (FAA). The overall reconstruction project includes realignment of the taxiway in the same general area as the existing Taxiway A. The Phase 7 project will also include the reconstruction and realignment of Taxiway A1 and Taxiway A2, which join Runway 9/27 with Taxiway A to meet current Federal Aviation Administration (FAA) design standards, which include having a right-angle intersection with the runway. The project also includes the expansion of the existing stormwater pond southeast of the DLH Terminal, and the dredging of the existing Northern Stormwater Pond to restore capacity.

The project work will include removal of existing airfield pavements, concrete taxiway pavement installation, asphalt shoulder pavement construction, and storm sewer infrastructure and drainage improvements. Taxiway edge lighting, airfield signage, and related airfield electrical circuits will be reconstructed with this project. Project work will also include turf establishment and installation of airfield pavement markings. The extent of the Phase 7 project areas are depicted on Figure 2.

The DLH includes the base of the Minnesota Air National Guards (ANG's) 148th Fighter Wing (FW). The 148th FW facilities are located on leased properties at several locations in the vicinity of the main east-west runway at the DLH and the main base is located on the eastern side of the DLH. The 148th FW base houses aircraft, vehicles, and equipment. Current and past operations at the base have involved the use of products such as fuels, oils, lubricants, paints, paint thinners, solvents, and aqueous film forming foam (AFFF).

A base-wide per- and polyfluoroalkyl substances (PFAS) Remedial Investigation (RI) is currently on-going at the DLH as the Minnesota ANG is evaluating PFAS impacts through a similar process used under the Installation Restoration Program (IRP) and consistent with the provisions of Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), as amended. Based on a review of the interim results provided by the Minnesota ANG, several detections of perfluorooctanoic acid (PFOA) and perfluorodecanoic acid (PFDA) exceeding their respective Minnesota Pollution Control Agency (MPCA) Commercial/Industrial Soil Reference Values (ISRVs) and/or Residential/Recreational SRVs (RSRVs) were located either within or adjacent to the Taxiway A Reconstruction and Northern Stormwater Pond Dredge portions of the Subject Property.

This investigation was performed to investigate the Site for the presence of contaminated soil that may be encountered during project construction-related activities and to provide necessary data for the development of a Response Action Plan (RAP)/Construction Contingency Plan (CCP), as needed. Drilling and sampling was completed on April 20 and 21, 2026.

The Phase II Environmental Investigation included thirteen hand auger soil borings (HA-01 through HA-13) completed to depths ranging between 3 to 5 feet below ground surface (bgs). Three sediment

samples were collected of the dredge material in the Northern Stormwater Pond as well as a surface water sample. The borings were completed along the existing Taxiway A, which will be reconstructed, in areas where the taxiway will be extended or where taxiway connector pavements will be constructed within the Phase 7 construction area, as well as around the footprint of the proposed stormwater pond expansion southeast of the DLH Terminal. Fill material was encountered throughout the borings extending to 5 feet bgs. No debris was observed. PID headspace readings were recorded between 0.0 to 2.1 parts per million (ppm), within background levels. No visual or olfactory indications of contamination were noted during the investigation.

Groundwater was not encountered while drilling. However, surface water located in the Northern Stormwater Pond contains PFAS contaminants above regulatory levels that will require proper management during dredging activities.

On the western extent of the Taxiway A area, PFDA (up to 9.24 nanogram per gram [ng/g]) and PFOA (4.34 ng/g) exceeded the MPCA ISRVs in boring HA-01 at depths ranging from 1 to 3 feet bgs. PFOS (up to 180 ng/g) and PFOA (0.366 ng/g) exceeded the MPCA RSRVs in borings HA-01 (at 1 and 3 feet bgs) and HA-02 (at 1 foot bgs). However no exceedances were identified at 3 feet bgs in HA-02. All other PFAS analytes in HA-01, HA-02, and HA-03 were below their respective RLs. On the eastern extent of the Taxiway A area, PFOS (up to 27.4 ng/g) and PFOA (up to 1.24 ng/g) exceeded the MPCA RSRVs in borings HA-09 (at 1 and 3 feet bgs) and HA-07 (at 1 and 3 feet bgs). All other PFAS analytes in HA-06, HA-07, HA-08, and HA-09 were below their respective RLs.

Soil encountered elsewhere during this Phase II Environmental Investigation met MPCA UFC, SRVs, and SLVs.

We recommend a RAP/CCP be prepared that describes the handling of PFAS contaminated soils along Taxiway A, the dredging procedures in the Northern Stormwater Pond, and procedures that would be employed in the event unknown contamination is encountered during excavation activities during the Taxiway A Reconstruction – Phase 7 project.

Phase II Environmental Investigation

Taxiway A Reconstruction - Phase 7

Prepared for the Duluth Airport Authority

1 Introduction

Short Elliott Hendrickson Inc. (SEH®) was retained by the Duluth Airport Authority (DAA) to conduct a Phase II Environmental Investigation for the proposed improvements for the Taxiway A Reconstruction - Phase 7 project located at the Duluth International Airport (DLH) in Duluth, St. Louis County, Minnesota (herein referred to as the "Site"). The Site location is depicted on **Figure 1**. The Site is described in further detail in **Section 1.1**.

1.1 Site Description

Taxiway A is the parallel taxiway for the main runway (Runway 9/27) serving the DLH. The existing Taxiway A is approximately 10,700 feet in length and the reconstruction is proposed to be completed in nine phases, based on the result of the 2021 DLH Airport Master Plan and discussions with the DAA and Federal Aviation Administration (FAA). The overall reconstruction project includes realignment of the taxiway in the same general area as the existing Taxiway A. The Phase 7 project will also include the reconstruction and realignment of Taxiway A1 and Taxiway A2, which join Runway 9/27 with Taxiway A to meet current FAA design standards, which include having a right-angle intersection with the runway. The project also includes the expansion of the existing stormwater pond southeast of the DLH Terminal, and the dredging of the existing Northern Stormwater Pond to restore capacity.

The project work will include removal of existing airfield pavements, concrete taxiway pavement installation, asphalt shoulder pavement construction, and storm sewer infrastructure and drainage improvements. Taxiway edge lighting, airfield signage, and related airfield electrical circuits will be reconstructed with this project. Project work will also include turf establishment and installation of airfield pavement markings. The extent of the Phase 7 project areas are depicted on **Figure 2**.

1.2 Purpose of Investigation

This investigation was performed for the following purposes.

- To investigate the project area for the presence of contaminated soil that may be encountered during project construction-related activities.
- To provide necessary data for the development of a Response Action Plan (RAP)/Construction Contingency Plan (CCP).

1.3 Scope of Work and Limitations

The Phase II Work Plans were developed using information gathered in the previously completed Modified Phase I Environmental Site Assessment (ESA) (SEH, May 2026), the work plans are

included in **Appendix A**. The proposed work was based on the design information available at the time. Therefore, the Phase II Environmental Investigation addressed general assumptions regarding anticipated construction considerations available at the time of the work plan development. Borings were completed adjacent to proposed construction areas identified from design files.

Modifications to the work plans were made based on field observations, accessibility, and other considerations. Photoionization detector (PID) soil headspace readings are summarized on **Table 1**. Detected soil and water sample analytical results are summarized on **Table 2** and **Table 3**, respectively.

SEH advanced a total of thirteen borings (HA-01 through HA-13) for the project on April 20 and April 21, 2026. One surface water sample (WS-01) and three sediment samples (SS-01 through SS-03) were also collected from the Northern Stormwater Pond on April 21, 2026. The investigation included field screening, geological logging, PID soil headspace screening, and soil and water collection and analysis. Results of the Phase II Environmental Investigation are summarized on attached tables and figures and discussed in **Section 4** of this report.

1.4 User Reliance

This Phase II Environmental Investigation and all reports, verbal and written, are solely for the use of DAA. Any third party may have different interests, purposes, and motives than DAA with regard to this assessment and report. Any reliance on the Phase II Environmental Investigation Report by any other party shall be at such party's sole risk, unless that party has written authorization from SEH and DAA, and is a party to the Agreement between SEH and DAA.

2 Site and Surrounding Area Background

2.1 Site Location

Figure 1 illustrates the location of the Site. The Site is located at the DLH in Duluth, St. Louis County, Minnesota. The Site occupies portions of the following parcel identification numbers (PINs):

- 010-2747-00160
- 010-2747-00210
- 010-2747-00220
- 280-0031-00455
- 280-0031-00456
- 395-0010-00330
- 395-0010-00348
- 395-0010-00349
- 395-0010-00350
- 395-0010-00550

2.2 Findings of the Taxiway A Reconstruction - Phase 7 - Phase I Environmental Site Assessment

SEH was retained by the DAA to conduct a Phase I Environmental Site Assessment (ESA) of the project areas associated with the proposed Taxiway A Reconstruction – Phase 7 project (SEH, 2026). The Phase I included a review of the land use history and previous investigations completed in the area around the Phase 7 areas.

The Subject Property includes three project areas that are identified as the Taxiway A Reconstruction area, the Terminal Stormwater Pond Expansion area, and the Northern Stormwater Pond Dredge area. These project areas are all separated and are generally located in the western, southeastern, and northern parts of the DLH, respectively. The areas are depicted on **Figure 2**.

The Subject Property was identified in numerous regulatory databases related to historic and current uses including Leak sites, spills, Resource Conservation Recovery Act (RCRA) hazardous waste generators, construction stormwater permits, and air emissions permits. Although the database report identified these listings for the Subject Property, a majority were located greater than 1,000 feet from the Subject Property areas with a select few located as close as 500 feet to the Subject Property areas.

Twelve regulated spills associated with the DLH were also identified as either unlocatable or as within the DLH property in the database reports. Although the exact location of these spills are unknown, it is not likely that all of these releases have affected the Subject Property. Given the use of the Taxiway A Reconstruction portion of the Subject Property and surrounding area, it is likely that some spills related to fueling activities have occurred on or adjacent to the Taxiway A Reconstruction portion of the Subject Property.

The remaining facilities included in the database report are unlikely to have current or former releases of hazardous substances or petroleum products with the potential to migrate to the Subject Property based on a variety of factors including, but not limited to: the overall setting in which the Subject Property is located, potential depth to groundwater and assumed groundwater flow direction, existing or past uses of the surrounding properties, the potential migration distance of hazardous substances and/or petroleum products in the area, and distance from the Subject Property.

The DLH includes the base of the Minnesota Air National Guards (ANG's) 148th Fighter Wing (FW). The 148th FW facilities are located on leased properties at several locations in the vicinity of the main east-west runway at the DLH and the main base is located on the eastern side of the DLH. The 148th FW base houses aircraft, vehicles, and equipment. Current and past operations at the base have involved the use of products such as fuels, oils, lubricants, paints, paint thinners, solvents, and aqueous film forming foam (AFFF). Based on a review of the 2019 and 2025 Five-Year Review Reports, the operable units (OUs) associated with the 148th FW base are not considered a REC for the Subject Property.

A base-wide per- and polyfluoroalkyl substances (PFAS) Remedial Investigation (RI) is currently on-going at the DLH as the Minnesota ANG is evaluating PFAS impacts through a similar process used under the Installation Restoration Program (IRP) and consistent with the provisions of Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), as amended. Based on a review of the interim results provided by the Minnesota ANG, several

detections of perfluorooctanoic acid (PFOA) and perfluorodecanoic acid (PFDA) exceeding their respective Minnesota Pollution Control Agency (MPCA) Commercial/Industrial Soil Reference Values (ISRVs) and/or Residential/Recreational SRVs (RSRVs) were located either within or adjacent to the Taxiway A Reconstruction and Northern Stormwater Pond Dredge portions of the Subject Property.

2.3 Regional Physical Setting

The Taxiway A alignment is the high spot at the project Site, at an approximate elevation of 1420 feet above mean sea level (amsl). The taxiway gently slopes to the southeast and a low area is located east of the taxiway at an approximate elevation of 1410 feet amsl.

2.3.1 Regional Geology

Based on previously completed investigations in the area of the project Site (**Section 2.2**), fill soils consisting generally of sand and silt with sand was encountered below paved areas extending to depths of 4 to 10 feet bgs (Braun, 2021). Published geology indicates native deposits in this area are glacial lake deposits of the Cromwell Formation of the Wrenshall Member of the Michigan Sub-episode and consist of brown silt and clay with minor sand (Minnesota Geological Survey [MGS], 2009).

The uppermost bedrock unit is the Gabbroic zone of the Duluth Complex at approximately 1320 to 1370 feet above amsl or around 50 to 100 feet bgs. The Gabbroic zone of the Duluth Complex is described as medium-grained, intergranular, foliated and locally layered olivine oxide gabbro. The Gabbroic zone of the Duluth Complex ranges from 2,300 to 5,000 feet thick (MGS, 2008).

2.3.2 Regional Hydrogeology

Based on previously completed investigations in the area of the project Sites (see **Section 2.2**), the DLH is situated on a groundwater mound. Groundwater flow in the northern half of the DLH is to the north, while groundwater flow in the southern half of the DLH is to the south (EMR, 2004).

Depth to groundwater is variable across the DLH. Well records obtained through the Minnesota Department of Health's (MDH's) Minnesota Well Index (MWI) online mapping tool indicate groundwater in the southwestern portion of the DLH (near the Taxiway A Reconstruction portion of the Subject Property) is at approximately 8 feet bgs (approximate elevation of 1403 amsl), and groundwater in the southeastern portion of the DLH (near the Terminal Pond Expansion portion of the Subject Property) is at approximately 10 feet bgs (approximate elevation of 1377 feet amsl). Standing water was observed in both the Terminal Stormwater Pond (approximate elevation of 1370 feet amsl) and North Stormwater Pond Dredge (approximate elevation of 1395 feet amsl) portions of the Subject Property during the site reconnaissance.

3 Overview of the Phase II Investigation

The following sections describe the scope and goals of the Phase II Environmental Investigation. Also included is methodology, quality assurance/quality control (QA/QC) information and regulatory/guidance levels. The Phase II Environmental Investigation areas are depicted on **Figure 2** and **Figure 3**. Results of the Phase II Environmental Investigation are discussed in **Section 4**. Completed borings, field screening results, and soil sample locations and results are captured on attached figures and tables.

3.1 Field Investigation and Sampling Methods

Soil borings (boreholes) were completed by SEH using a powered hand auger and a non-powered hand auger. Lubricants or solvents with petroleum products or hazardous substances were not used for downhole drilling or on sampling equipment. Each borehole was properly abandoned in accordance with local regulations. The location of each borehole is depicted on **Figure 3**.

3.1.1 Soil Field Screening

Soil samples were collected for field screening from each boring by placing soil into a new, clean, quart-size, labeled, resealable bag. The bags used for field screening were used for one sample only. Soil clumps were manually agitated and the bags were shaken vigorously at the beginning and end of the headspace development period. The bags were placed in a sunny location. Weather conditions at the time of the investigation were calm.

PID headspace readings were collected in general accordance with MPCA guidelines. A MiniRae PID with a 10.6 electron volt (eV) bulb calibrated to isobutylene was inserted through a small opening in the bag and the highest reading was recorded. Empty bag readings were recorded periodically throughout the investigation and are considered “background.” Empty bags had readings ranging from 0.0 to 0.3 ppm. The results of the headspace readings are summarized on **Table 1**.

3.1.2 Soil Sampling

Soil samples were collected using the hand auger for field screening and placed into the appropriate jars for laboratory analysis.

The SEH scientist wore a new clean pair of disposable Nitrile® gloves while collecting each sample. All remaining soil from each sample and borehole cuttings were thin spread on-site. Sample containers were placed in coolers with ice and were protected from sunlight. Samples were transported to Eurofins within 48 hours of their collection with proper chain-of-custody documentation. Specific information on samples collected (e.g. total number of samples collected, sample depths, etc.) is included within **Section 4**.

Analytical samples collected were labeled corresponding to the boring number from which they were collected (for example HA-06). Additionally, soil samples were labeled for the depth from which they were collected. For example, a sample collected from a three foot depth in HA-06 is labeled HA-06-3. Samples were collected from the interval ± 0.5 foot on either side of the noted sample depth. For example: a sample with a noted depth of 3 feet bgs contains material from 2.5 to 3.5 feet bgs.

3.1.3 Water Sampling

Water samples were collected using a disposable bailer. The SEH scientist wore a new clean pair of disposable Nitrile® gloves while collecting each water sample. The water samples were placed in the appropriate laboratory containers in accordance with the laboratory’s specifications. The sample containers were placed in a cooler with ice and protected from sunlight. The samples were then transported to Eurofins within 48 hours of their collection with proper chain-of-custody documentation.

Specific information on samples collected at each site (e.g., total number of samples collected, samples depths, etc.) is included within **Section 4**.

Water sampling was completed in the area of proposed dredging of the Northern Stormwater Pond. The purpose of water sampling was to investigate water most likely to be dewatered during construction and dredging activities.

3.1.4 Chemical Analytical Methodologies

Soil sample analytes included:

- Diesel Range Organics (DRO) (Wisconsin Method DRO)
- DRO with Silica Gel Cleanup (DRO) (Wisconsin Method DRO – Silica Gel Cleanup)
- Gasoline Range Organics (GRO) (Wisconsin Method GRO)
- Volatile Organic Compounds (VOCs) (Environmental Protection Agency [EPA] Method 8260D)
- Polycyclic Aromatic Hydrocarbons (PAHs) (EPA Method 8270E by selective ion monitoring (SIM))
- Resource Conservation and Recovery Act (RCRA) 8 Metals (EPA Method 7471B/6020B)
- Moisture (SW3550C)
- Per- and polyfluoroalkyl substances (PFAS) (EPA 1633, Revision A, by liquid chromatography/mass spectrometry [LC-MS/MS])

Water sample analytes included:

- DRO (Wisconsin Method DRO)
- GRO (Wisconsin Method GRO)
- VOCs (EPA Method 8260D)
- PAHs (EPA Method 8270E by SIM)
- RCRA 8 Metals (EPA Method 7471B/6020B)
- PFAS (EPA Draft-4 1633, Revision A, by LC-MS/MS)

3.2 Notes on Analytical Methods

The following descriptions provide background information and terminology for DRO, Silica Gel Clean-Up, GRO, and PFAS.

3.2.1 DRO

The Wisconsin DRO Method is designed to measure mid-range petroleum products such as diesel or fuel oil. This method provides gas chromatographic conditions for the detection of semi-volatile petroleum fractions such as diesel, fuel oil #2, or kerosene. DRO analysis includes hydrocarbons within the range of C10 - C28 and a boiling point range between approximately 170 degrees Celsius (º C) and 430°C. Quantitation is based on a direct comparison of the total area within this range to the total area of the Diesel Component Standard. As defined in the method, other organic compounds, including chlorinated hydrocarbons, phenols, phthalate esters, PAHs, kerosene, fuel oils and heavier oils are measurable within the range of C10 - C28. DRO results include these compounds/products. Components greater than C28 present in products such as

motor oils or lubricating oils are detectable under the conditions of the method (Wisconsin DNRa, 1995).

3.2.2 Silica Gel Clean-up

DRO samples may be complicated by biogenic interference which includes materials such as naturally occurring organics. The resulting concentrations may occur at levels well above the regulatory limit.

Silica gel cleanup is used to separate analytes of different polarity. The majority of “fresh” or non-biodegraded petroleum hydrocarbons are considered non-polar compounds. Depending upon the soil makeup, the majority of the biogenic compounds may be polar or semi-polar in nature. The silica gel cleanup procedure will preferentially remove polar and semi-polar compounds, thus leaving the non-polar or petroleum hydrocarbons behind.

The cleanup procedure typically takes place after the initial DRO extract has been analyzed and the client evaluates the results. It is important that the original extract be used to minimize the variable of non-homogeneous samples. The original extract is taken back to the laboratory for cleanup and re-injected along with the batch QC samples.

3.2.3 GRO

The Wisconsin GRO Method is designed to measure the concentration of GRO in water and soil. GRO analysis includes hydrocarbon within the range of C6 - C10 and a boiling point range between approximately 60°C and 220°C. All the chromatographic response falling between the onset of the methyl-tertiary-butyl ether peak and the conclusion of the naphthalene peak. Quantitation is based on a direct comparison of the total area within this range to the total area of the Gasoline Component Standard.

As defined in the method, other organic compounds including chlorinated solvents, ketones, ethers, mineral spirits, stoddard solvents, and napthas are measurable within the range of C6 - C10. High levels of heavier petroleum products such as diesel fuel may contain some volatile components producing a response within the retention time range for GRO. As defined in the method, results for GRO include petroleum fractions such as gasoline, stoddard solvent, or mineral spirits as well as other measurable organic compounds such as chlorinated solvents, ketones, and ethers (Wisconsin DNRb, 1995).

3.2.4 PFAS EPA Method 1633

The EPA has developed the 1633 method to test for 40 PFAS compounds in wastewater, surface water, groundwater, soil, biosolids, sediment, landfill leachate, and fish tissue. Method 1633 can be used in several applications including National Pollution Discharge Elimination System (NPDES) discharge permits and is approved method within MPCA Guidance Document p-eao2-28 (MPCA, 2022). This method is a performance-based approach to accommodate the unique challenges PFAS compounds possess. Samples are extracted using a methanol solution, cleaned with carbon and other filters, and then analyzed with a liquid chromatography–tandem mass spectrometry instrument. This filtering and cleaning removes materials that may interfere with accurate results. Care needs to be taken with sample collection, preparation, and analysis to prevent cross contamination. The method specifies that strict quality control and detailed record-keeping measures be taken in order to ensure reliable and repeatable results. (EPA, December 2024; MPCA, January 2022).

3.3 Quality Assurance/Quality Control

Eurofins is a Minnesota-certified laboratory and has a current QA/QC manual on file with the MDH and the MPCA. A QA/QC report "Project Narrative" is attached near the beginning of each Eurofins laboratory report (**Appendix B**). The QA/QC report includes:

- General information
- Hold time
- Sample preparation
- Initial calibrations
- Continuing calibrations
- Surrogates
- Method blanks
- Laboratory control spikes
- Matrix spikes
- Duplicate samples
- Additional comments

Based on review of the laboratory results and QA/QC data, the quality of the data is acceptable for the purposes of this report.

3.4 Regulatory and Guidance Levels

To evaluate the magnitude of impacts, MPCA regulatory levels and guidelines, where established, are compared to analytical results for detected chemicals.

3.4.1 Soil

Soil results are compared to MPCA RSRVs, ISRVs, Soil Leaching Values (SLVs), and UFC.

3.4.1.1 Soil Reference Values

Revised SRVs were published by the MPCA in May 2026 (MPCA, 2026), and are incorporated into this report. The MPCA intends to complete annual updates to the SRVs. The MPCA SRVs are intended to be risk-based screening values and were derived using methodology from the EPA's Superfund Program, exposure parameters based on land use categories, contaminants toxicity values, and a contaminant's chemical-specific parameters.

3.4.1.2 Screening Soil Leaching Values

The MPCA has established SLVs that provide a conservative estimate of whether groundwater contaminant concentrations could result from leaching to groundwater from contaminated soils in direct contact with groundwater. The current Screening SLVs were established in 2013 (as discussed in MPCA Guidance Document c-r1-04 [MPCA, May 2013]) and are referenced in the MPCA Guidance Document c-rem1-01, *Best Management Practices for the Off-Site Reuse of Unregulated Fill* (MPCA, 2024).

3.4.1.3 MPCA Unregulated Fill Criteria

The MPCA has defined unregulated fill in guidance document c-rem1-01, *Best Management Practices for the Off-Site Reuse of Unregulated Fill* (MPCA, 2024). The guidance document

states that soil that meets all SLV and SRV limits, is free from solid waste, debris, asbestos containing materials (ACM), visual staining and odors, and has organic vapors less than 10 parts per million (ppm) (measured using a PID) is considered to meet the definition of unregulated fill. This document also defines limits for DRO and gasoline range organics (GRO) of 100 milligrams per kilogram (mg/kg) in soil are as meeting the definition of unregulated fill. ACM is material containing greater than 1% asbestos, as defined in Minnesota Statutes, Section 326.71, Subdivision 3.

3.4.2 Water

Water results are compared to Minnesota Department of Health (MDH) Health Based Guidance (HBG) that have been established to evaluate drinking water, NPDES General Permit Limits (GPLs) for contaminated groundwater discharges, and EPA maximum contaminant levels (MCLs) for drinking water contaminants.

The MDH HBGs, NPDES GPLs, and EPA MCLs are used as a proxy for evaluating the chemicals detected in water; however, for construction purposes the treatment limits for dewatering discharge would be established in the issued discharge permit for the project. Results for this project are compared to MDH HBGs, NPDES GPLs, and EPA MCLs on **Table 3**.

3.4.2.1 Minnesota Department of Health – Health Based Guidance

Water results are compared to MDH HBGs that have been established to evaluate drinking water. These values include Health Risk Limits (HRLs), Health Based Values (HBVs), and Risk Assessment Advice (RAA) levels. The MDH developed guidance (published in November 2018) for petroleum contaminated drinking water wells which supersedes guidance of Total Petroleum Hydrocarbons (TPH) criteria developed in 2000. Petroleum products contain many chemicals and drinking water criteria are available for only a small fraction of them. This guidance provides a margin of safety in situations where drinking water is contaminated with petroleum residuals that do not exceed individual chemical criteria. The MDH recommends a RAA of 50 ug/L TPH which is based on a pyrene surrogate. The MDH guidance indicates that the DRO and GRO values should be added, and other volatile petroleum concentrations should be subtracted from the cumulative total. For the purpose of this Phase II Environmental Investigation, these values (except for RAAs) are used as a proxy for evaluating the chemicals detected in groundwater. A simplified approach of using 50 ug/L as the MDH HBG for DRO and GRO without the calculation and subtraction is being utilized. It should also be noted that RLs for this project are greater than 50 ug/L for DRO and GRO (MDH, 2018).

3.4.2.2 NPDES - General Permit Limits

The NPDES general permit (MNG790000) identifies discharge limits for contaminated water discharges. The general permit (MNG790000) was reissued on May 1, 2022, and expires April 30, 2027 (MPCA, May 2022). The general permit regulates the discharge of groundwater extracted at cleanup and redevelopment sites. This includes discharges which have been contaminated by past or present activities, from both known and unknown sources of contamination. GPLs are used in this report as a comparison for groundwater contaminant concentrations. The permit limits used in this report are compared to three different types of groundwater discharge; 1) land application, 2) surface waters not designated as drinking water, and 3) trout streams/surface waters designated as drinking water.

3.4.2.3 Environmental Protection Agency – Maximum Contaminant Levels

The EPA has established National Primary Drinking Water Regulations (NPDWRs) that set mandatory water quality standards for drinking water contaminants that apply to public water systems. Standards called MCLs are established to protect the public against consumption of drinking water contaminants that present a risk to human health. MCLs are not enforceable standards that apply to construction related handling of groundwater (EPA, January 2022).

3.4.3 Regulatory Levels vs. Laboratory Reporting Limits

The following sections describe situations when the achievable laboratory reporting limits (RLs) are above the established regulatory guidance. Tables of analytical results attached to this report include only detected parameters. In some cases, laboratory RLs are greater than the regulatory limits. If a parameter is not detected in any sample, the parameter is not included on the attached tables. All analytical results are included in **Appendix B**.

3.4.3.1 Soil Leaching Values

Several concentrations of VOCs in soil have laboratory RLs that exceed MPCA SLVs (SLVs are as low 0.000015 mg/kg). In these cases, the SLV is not achievable by the laboratory analytical method. RLs that exceed regulatory limits also commonly occur when the sample diluted (required by high level of target, non-target analytes or matrix interferences).

3.4.3.2 PAH Detection Limits

The effluent limitations contained in the General Permit for total carcinogenic PAHs, total non-carcinogenic PAHs, and anthracene are below the method detection limit (MDL) of currently available and approved analytical test methods. The limit at which compliance or noncompliance is determined will be based on the Minimum Level (ML) of EPA method 625 or any updates to that method as published in 40 CFR Part 136, Appendix A. ML is synonymous with RL. If during the life of the General Permit a more sensitive test method is approved by EPA for wastewater analyses, then the General Permit effluent limitation will become the enforceable limitation rather than the analytical detection limit (EPA, 2016).

4 Phase II Environmental Investigation Results

SEH advanced thirteen soil borings (HA-01 through HA-13) and collected 26 soil samples for laboratory analysis. SEH also collected three sediment samples (SS-01 through SS-03) of material to be dredged from the Northern Stormwater Pond for laboratory analysis, as well as a surface water sample (WS-01) from the Northern Stormwater Pond for laboratory analysis. Borings were advanced to maximum depths of 5.0 feet bgs. **Figure 3** depicts boring and sample locations. The Investigation results are summarized on **Figure 3**. PID soil headspace readings are summarized on **Table 1**. Detected soil sample analytical results are summarized on **Table 2**. Detected water sample analytical results are summarized on **Table 3**. Work plan documents, laboratory reports and boring logs are included as **Appendix A**, **Appendix B**, and **Appendix C**, respectively.

4.1 Geologic, Hydrogeologic, and Field Screening Results

Fill material, consisting of clayey sand with gravel, silty sand with gravel, and sandy clay with cobbles, was observed extending to the termination depth of the hand auger borings (5 feet bgs). Refusal was encountered at HA-07 at 3.0 feet bgs due to frost in the ground from the remnants of

an adjacent snow storage pile. No debris was observed in the borings and native deposits were not encountered.

PID headspace readings were recorded between 0.0 to 2.1 ppm, within background levels. No visual or olfactory indications of contamination were noted in observed soils. PID headspace results are summarized on **Table 1**.

Groundwater was not encountered during the advancement of the hand auger borings.

4.2 Results of Subsurface Investigation – Taxiway A Reconstruction Area

Nine borings (HA-01 through HA-09) were completed along the existing Taxiway A, which will be reconstructed, and in areas where the taxiway will be extended or where taxiway connector pavements will be constructed within the Phase 7 project area. Select soil samples were collected and analyzed for DRO, GRO, VOCs, PAHs, RCRA Metals, and PFAS. Soil samples were collected for chemical analyses with sampling intervals targeted to zones where indications of contamination were observed, if applicable, and to evaluate potential impacts in soil that will likely be excavated during redevelopment to establish limited subgrade frost penetrations zones.

All soil sample analytical results for DRO, GRO, VOCs, PAHs, and RCRA Metals were reported below their respective MPCA SLVs, SRVs, and UFC.

On the western extent of the Taxiway A area, perfluorodecanoic acid (PFDA) (9.24 nanogram per gram [ng/g]) exceeded the ISRV (0.36 ng/g) in boring HA-01 at 1 foot bgs and exceeded the ISRV at 3 feet bgs (4.98 ng/g). Perfluorooctanoic acid (PFOA) (4.34 ng/g) also exceeded the ISRV (2 ng/g) in boring HA-01 at 3 feet bgs. Perfluorooctanesulfonic acid (PFOS) (176 ng/g) above the RSRV (13 ng/g) and PFOA (0.669 ng/g) above the RSRV (0.36 ng/g) were identified in boring HA-01 at 1 foot bgs. PFOA (0.366 ng/g) above the RSRV (0.36 ng/g) was also identified in boring HA-02 at 1 foot bgs, however no exceedances were identified at 3 feet bgs in HA-02. All other PFAS analytes in HA-01, HA-02, and HA-03 were below their respective RLs.

On the eastern extent of the Taxiway A area, PFOS (16.0 ng/g) above the RSRV (13 ng/g) was identified in boring HA-09 at 1 feet bgs, and PFOA (0.892 ng/g) above the RSRV (0.36 ng/g) was identified at 3 feet bgs. PFOS (27.4 ng/g) above the RSRV (13 ng/g) was identified in boring HA-07 at 1 feet bgs, and PFOA (up to 1.24 ng/g) above the RSRV (0.36 ng/g) was identified at 1 and 3 feet bgs. All other PFAS analytes in HA-06, HA-07, HA-08, and HA-09 were below their respective RLs.

PFAS was not analyzed in HA-04 and HA-05 as borings were located adjacent to ANG borings BGSL-09 and BGSL-10 that were collected on April 29, 2024, with no laboratory analytical exceedances of the MPCA RSRVs.

4.3 Results of Subsurface Investigation – Terminal Stormwater Pond Expansion Area

Four borings (HA-10 through HA-13) were completed around the proposed expansion area of the Terminal Stormwater Pond, which will be expanded on the west side of the existing pond, and in areas where the existing pond discharges. Select soil samples were collected and analyzed for DRO, GRO, VOCs, PAHs, RCRA Metals, and PFAS. Soil samples were collected for chemical

analyses with sampling intervals targeted to zones where indications of contamination were observed, if applicable, and to evaluate potential impacts in soil that will likely be excavated during expansion.

All soil sample analytical results were reported below their respective MPCA SLVs, SRVs, and UFC.

4.4 Results of Subsurface Investigation – Northern Stormwater Pond Dredging

Three sediment samples (SS-01 through SS-03) were completed in the area of the proposed dredging of the existing Northern Stormwater Pond, which will be dredged to restore capacity on the south side of the existing pond. Select soil samples were collected and analyzed for DRO, DRO Silica gel, GRO, VOCs, PAHs, RCRA Metals, and PFAS. Sediment samples were collected for chemical analyses with sampling intervals targeted to zones where indications of contamination were observed, if applicable, and to evaluate potential impacts in sediment that will likely be excavated during restoration of pond capacity.

All sediment sample analytical results were reported below their respective MPCA SLVs, SRVs, and UFC.

One surface water sample (WS-01) was taken of the stormwater pond. The reporting limit for GRO (<100 ug/l) in the sample was above the EPA MCL (50 ug/l) but was below the MPCA NPDES GPLs (200 ug/l). Various PFAS substances were above the MDH HBG in the water sample including; perfluorobutanesulfonic acid (PFBS) (48.0 ng/l) above the MDH HBG (0.1 ng/l), perfluorobutanoic acid (PFBA) (15.9 ng/l) above the MDH HBG (7 ng/l), and perfluorohexanoic acid (PFHxA) (54.3 ng/l) above the MDH HBG (0.2 ng/l). Additionally, the following PFAS substances were identified above the EPA MCL; perfluorohexanesulfonic acid (PFHxS) (246 ng/l) above the EPA MCL (10 ng/l), PFOS (165 ng/l) above the EPA MCL (4 ng/l), and PFOA (41.0 ng/l) above the EPA MCL (4 ng/l).

5 Conclusions and Recommendations

The Phase II Environmental Investigation included thirteen hand auger soil borings (HA-01 through HA-13) completed to depths ranging between 3 to 5 feet bgs. Three sediment samples (SS-01 through SS-03) were collected of the dredge material in the Northern Stormwater Pond as well as a surface water sample. The borings were completed along the existing Taxiway A, which will be reconstructed, in areas where the taxiway will be extended or where taxiway connector pavements will be constructed within the Phase 7 construction area, as well as around the footprint of the proposed stormwater pond expansion southeast of the DLH Terminal. Fill material was encountered throughout the borings extending to 5 feet bgs. No debris was observed. PID headspace readings were recorded between 0.0 to 2.1 ppm, within background levels. No visual or olfactory indications of contamination were noted during the investigation.

Groundwater was not encountered while drilling. However, surface water located in the Northern Stormwater Pond contains PFAS contaminants above regulatory levels that will require proper management during dredging activities.

On the western extent of the Taxiway A area, PFDA (up to 9.24 ng/g) and PFOA (4.34 ng/g) exceeded the MPCA ISRVs in boring HA-01 at depths ranging from 1 to 3 feet bgs. PFOS (up to

180 ng/g) and PFOA (0.366 ng/g) exceeded the MPCA RSRVs in borings HA-01 (at 1 and 3 feet bgs) and HA-02 (at 1 foot bgs). However, no exceedances were identified at 3 feet bgs in HA-02. All other PFAS analytes in HA-01, HA-02, and HA-03 were below their respective RLs.

On the eastern extent of the Taxiway A area, PFOS (up to 27.4 ng/g) and PFOA (up to 1.24 ng/g) exceeded the MPCA RSRVs in borings HA-09 (at 1 and 3 feet bgs) and HA-07 (at 1 and 3 feet bgs). All other PFAS analytes in HA-06, HA-07, HA-08, and HA-09 were below their respective RLs.

Soil encountered elsewhere during this Phase II Environmental Investigation met MPCA UFC, SRVs, and SLVs.

We recommend a RAP/CCP be prepared that describes the handling of PFAS contaminated soils along Taxiway A, the dredging procedures in the Northern Stormwater Pond, and procedures that would be employed in the event unknown contamination is encountered during excavation activities during the Taxiway A Reconstruction – Phase 7 project.

- Detections below MPCA 2026 RSRVs and ISRVs
- Detections exceeding 2026 MPCA ISRVs
- Detections exceeding MPCA 2026 RSRVs

Hand Auger Boring (HA), Sediment Sample (SS), Water Sample (WS)

HA-01
EOB = 10 (1, 15) — Termination Depth (ft); Sample Depths
Soil Analytical Results
(3) Diesel Range Organics - 108 — Analytical Results (ng/g)
Groundwater Observation Summary
PFOS - 0.01 — Sample Depth (ft); Analytical Results (ng/L)
Soil Observation Summary
0.5 ppm — Maximum PID Measurement
Fill to EOB — Soil Description

- Soil parameter concentrations shown exceed Minnesota Pollution Control Agency (MPCA) Screening Soil Reference Values (SLVs), Residential/Recreational Soil Reference Values (RSRVs), and Commercial Industrial SRVs (ISRVs).
- **Bold** soil detections indicate and exceedance of the ISRV.
- Water parameter concentrations shown exceed Minnesota Department of Health (MDH) Health Based Guidance (HBGs), Environmental Protection Agency (EPA) Maximum Contaminant Levels (MCLs), and National Pollutant Discharge Elimination System (NPDES) General Permit Limits (GPLs).
- Depth = Sample depth in feet below ground surface (bgs).
- EOB = End of Boring (Termination Depth of Hand Auger Boring).
- ppm = parts per million
- Soil detections shown are in nanograms per gram (ng/g).
- Water detections shown are in nanograms per liter (ng/L).
- Air National Guard (ANG)
- 1H,1H,2H,2H-Perfluorooctane sulfonic acid (6:2 FTS)
- Per- and polyfluoroalkyl Substances (PFAS)
- Perfluorobutanesulfonic acid (PFBS)
- Perfluorobutanoic acid (PFBA)
- Perfluoroheptanesulfonic acid (PFHpS)
- Perfluoroheptanoic acid (PFHpA)
- Perfluorohexanesulfonic acid (PFHxS)
- Perfluorohexanoic acid (PFHxA)

1 - PFAS samples collected to be run as needed depending on initial samples results. Initial PFAS samples run will be HA-01, HA-03, HA-06, and HA-09 based on 2024 PFAS sampling in the Taxiway A area.
2 - Deep samples collected at 3 feet bgs will be held at the lab and run if needed, depending on results of shallower samples.

ANALYTICAL REPORT

PREPARED FOR

Attn: Keri Aufdencamp
Short Elliott Hendrickson, Inc. dba SEH
3535 Vadnais Center Drive
St. Paul, Minnesota 55110

Generated 5/5/2026 3:02:38 PM

JOB DESCRIPTION

Duluth Airport Taxiway A

JOB NUMBER

310-330206-1

Eurofins Cedar Falls
3019 Venture Way
Cedar Falls IA 50613

See page two for job notes and contact information.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

Job Narrative
310-330206-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 4/22/2026 1:20 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 1.9°C, 4.0°C, 4.3°C and 5.1°C.

GC/MS VOA
Method 8260D: The method requirement for no headspace was not met. The following volatile sample was analyzed with headspace in the sample container(s): Trip Blank - Water (310-330206-33).

Method 8260D: The continuing calibration verification (CCV) associated with batch 310-487059 recovered above the upper control limit for Chloroethane(23%D), Trichlorofluoromethane(24%D), Dichlorofluoromethane(25%D), and Bromomethane(26%D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is:(CCV 310-487059/4).

Method 8260D: The continuing calibration verification (CCV) associated with batch 310-487062 recovered above the upper control limit for Acetone(24%D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is:(CCV 310-487062/3).

Method 8260D: The continuing calibration verification (CCV) associated with batch 310-487062 recovered above the upper control limit for Chloroethane(44%D), Vinyl chloride(22%D), Dichlorofluoromethane(27%D), and Bromomethane(60%D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is:(CCV 310-487062/4).

Method 8260D: The continuing calibration verification (CCV) associated with batch 310-487186 recovered outside of the control limits for 2,2-Dichloropropane(-23%D). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The associated sample is impacted: (CCV 310-487186/3).

Method 8260D: The continuing calibration verification (CCV) associated with batch 310-487186 recovered above the upper control limit for Chloroethane(53%D) and Bromomethane(52%D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is:(CCV 310-487186/4).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E: The continuing calibration verification (CCV) associated with batch 310-487274 recovered above the upper control limit for 4,4-DDD (31 %D), Endosulfan Sulfate (21 %D), Endrin (29 %D) and Methoxychlor (29 %D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is:(CCV 310-487274/3).

Method 8270E: The continuing calibration verification (CCV) analyzed in 310-487299 was outside the method criteria for the following analyte(s): nitrobenzene-d5 (39%D). As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Job ID: 310-330206-1 (Continued) Eurofins Cedar Falls

Method 8270E: The continuing calibration verification (CCV) associated with batch 310-487299 recovered above the upper control limit for acenaphthylene (22%D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is:(CCV 310-487299/15).

Method 8270E: The surrogate recovery for the blank associated with preparation batch 310-487020 and analytical batch 310-487054 was outside the upper control limits.

Method 8270E: Surrogate recovery was outside acceptance limits for the following matrix spike/matrix spike duplicate (MS/MSD) sample: (310-330206-B-2-C MSD). The parent sample's surrogate recovery was within limits. The MS/MSD sample has been qualified and reported.

Method 8270E: Surrogate recovery for the following sample was outside control limits: HA-06-1 (310-330206-3). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8270E: The following sample was diluted due to the nature of the sample matrix: HA-07-1 (310-330206-15). Elevated reporting limits (RLs) are provided.

Method 8270E: The continuing calibration verification (CCV) associated with batch 310-487149 recovered above the upper control limit for 2-methylnaphthalene (23%D) and acenaphthene (22%D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is:(CCV 310-487149/4).

Method 8270E: The continuing calibration verification (CCV) analyzed in 310-487291 was outside the method criteria for the following analyte(s): nitrobenzene-d5 (26%D). As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: Surrogate recovery was outside acceptance limits for the following matrix spike/matrix spike duplicate (MS/MSD) sample: (310-330206-B-23-A MS). The parent sample's surrogate recovery was within limits. The MS/MSD sample has been qualified and reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Gasoline Range Organics
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
Method WI-DRO: Significant peaks, readily distinguished from background, were detected in the following samples within five minutes after the end of the analytical window defined by the last component eluting in the Diesel Range Organics (DRO) mix (i.e., n-Octacosane): HA-08-1 (310-330206-1), HA-08-3 (310-330206-2), HA-06-1 (310-330206-3), HA-05-1 (310-330206-5), HA-03-1 (310-330206-9), HA-03-3 (310-330206-10), HA-01-3 (310-330206-12), HA-02-1 (310-330206-13), HA-02-3 (310-330206-14), HA-07-1 (310-330206-15), HA-07-2.5 (310-330206-16), HA-09-1 (310-330206-17) and HA-09-3 (310-330206-18).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

PFAS
Method 1633A: The continuing calibration verification (CCV) recovered outside of control limits for IDA compound(s) (flagged). Section 14.3.3 of the finalized EPA 1633 states that the recovery of target analytes for the CCV must be within 70 - 130%, unless the analyte is not of concern for a given project. Since target analyte(s) associated with this IDA are within spec, data is reported. The following samples are impacted: HA-09-1 (310-330206-17), SS-01 (310-330206-20), SS-02 (310-330206-21), SS-03 (310-330206-22), HA-10-1 (310-330206-23), HA-10-3 (310-330206-24), HA-11-1 (310-330206-25), HA-11-3 (310-330206-26), HA-12-1 (310-330206-27), HA-12-3 (310-330206-28) and HA-13-1 (310-330206-29).

Method 1633A: The continuing calibration verification (CCV) associated with batch 240-699825 recovered above the upper control limit for Nonafluoro-3,6-dioxaheptanoic acid (NFDHA). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are:HA-06-1 (310-330206-3), HA-03-1 (310-330206-9) and HA-01-1 (310-330206-11).

Method 1633A: The continuing calibration verification (CCV) recovered outside of control limits for IDA compound(s) (flagged). Section 14.3.3 of the finalized EPA 1633 states that the recovery of target analytes for the CCV must be within 70 - 130%, unless the analyte is not of concern for a given project. Since target analyte(s) associated with this IDA are within spec, data is reported. The following samples are impacted: HA-06-1 (310-330206-3) and HA-01-1 (310-330206-11).

Job ID: 310-330206-1 (Continued) Eurofins Cedar Falls

Method 1633A: Samples re-extracted at 1.00g due to low/no IDA recoveries. Since low IDA was likely due to matrix effects. Sample was analyzed at a dilution and may have elevated RLs. Laboratory proceeded with re-analysis. HA-03-1 (310-330206-9)

Method 1633A: The continuing calibration verification (CCV) associated with batch 240-700142 recovered above the upper control limit for Perfluorododecanesulfonic acid (PFDoS). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
S1+	Surrogate recovery exceeds control limits, high biased.

LCMS

Qualifier	Qualifier Description
I	Ion ratio outside limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Accreditation/Certification Summary

Client: Short Elliott Hendrickson, Inc. dba SEH
Job ID: 310-330206-1
Project/Site: Duluth Airport Taxiway A

Laboratory: Eurofins Cedar Falls

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Minnesota	NELAP	019-999-319	12-31-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Moisture		Solid	Percent Moisture
Moisture		Solid	Percent Solids

Laboratory: Eurofins Cleveland

The accreditations/certifications listed below are applicable to this report.

Authority	Program	Identification Number	Expiration Date
Minnesota	NELAP	039-999-348	12-31-26

Method Summary

Client: Short Elliott Hendrickson, Inc. dba SEH
Job ID: 310-330206-1
Project/Site: Duluth Airport Taxiway A

Method	Method Description	Protocol	Laboratory
8260D	Volatile Organic Compounds by GC/MS	SW846	EET CF
8270E	Semivolatile Organic Compounds (GC-MS/MS)	SW846	EET CF
WI-GRO	Wisconsin - Gasoline Range Organics (GC)	WI-GRO	EET CF
WI-DRO	Wisconsin - Diesel Range Organics (GC)	WI-DRO	EET CF
1633A	Per- and Polyfluoroalkyl Substances by LC/MS/MS, 1633A	EPA	EET CLE
6020B	Metals (ICP/MS)	SW846	EET CLE
7470A	Mercury (CVAA)	SW846	EET CLE
7471B	Mercury (CVAA)	SW846	EET CLE
Moisture	Percent Moisture	EPA	EET CF
1633	Solid-Phase Extraction (SPE)	EPA	EET CLE
1633 Shake	Shake Extraction with SPE	EPA	EET CLE
3005A	Preparation, Total Recoverable or Dissolved Metals	SW846	EET CLE
3050B	Preparation, Metals	SW846	EET CLE
3511	Microextraction of Organic Compounds	SW846	EET CF
3546	Microwave Extraction	SW846	EET CF
5030B	Purge and Trap	SW846	EET CF
5035	Closed System Purge and Trap	SW846	EET CF
7470A	Preparation, Mercury	SW846	EET CLE
7471B	Preparation, Mercury	SW846	EET CLE
WI DRO PREP	Wisconsin Extraction (Diesel Range Organics)	WI-DRO	EET CF
WI GRO	Closed System Purge and Trap	WI-GRO	EET CF

310-330206 Chain of Custody

Cooler/Sample Receipt and Temperature Log Form

Client Information

Client: SEH

City/State: CITY | STATE | Project:

Receipt Information

Date/Time Received: DATE 4.22.26 | TIME 1320 | Received By: PH

Delivery Type: ☐ UPS ☐ FedEx ☐ FedEx Ground ☐ US Mail ☐ Spee-Dee
☑ Lab Courier ☐ Lab Field Services ☐ Client Drop-off ☐ Other:_____

Condition of Cooler/Containers

Sample(s) received in Cooler? ☑ Yes ☐ No *If yes:* Cooler ID:

Multiple Coolers? ☑ Yes ☐ No *If yes:* Cooler # 1 of 4

Cooler Custody Seals Present? ☐ Yes ☑ No *If yes:* Cooler custody seals intact? ☐ Yes ☐ No

Sample Custody Seals Present? ☐ Yes ☑ No *If yes:* Sample custody seals intact? ☐ Yes ☐ No

Trip Blank Present? ☑ Yes ☐ No *If yes:* Which VOA samples are in cooler? ↓

HA-03-1, 01-3, 02-1,3, 07-1, 2.5, 09-1,3

Temperature Record

Coolant: ☑ Wet ice ☐ Blue ice ☐ Dry ice ☐ Other:_____ ☐ NONE

Thermometer ID: CC | Correction Factor (°C): 0

• Temp Blank Temperature – If no temp blank, or temp blank temperature above criteria, proceed to Sample Container Temperature

Uncorrected Temp (°C): 5.1 | Corrected Temp (°C): 5.1

• Sample Container Temperature

	CONTAINER 1	CONTAINER 2
Container(s) used:		
Uncorrected Temp (°C):		
Corrected Temp (°C):		

Exceptions Noted

1) If temperature exceeds criteria, was sample(s) received same day of sampling? ☐ Yes ☐ No
   a) *If yes:* Is there evidence that the chilling process began? ☐ Yes ☐ No

2) If temperature is <0°C, are there obvious signs that the integrity of sample containers is compromised? (e g , bulging septa, broken/cracked bottles, frozen solid?) ☐ Yes ☐ No

NOTE: If yes, contact PM before proceeding. If no, proceed with login

Receipt Information

Date/Time Received: DATE 4.22.26 | TIME 1320 | Received By: PH

Delivery Type: ☐ UPS ☐ FedEx ☐ FedEx Ground ☐ US Mail ☐ Spee-Dee ☑ Lab Courier ☐ Lab Field Services ☐ Client Drop-off ☐ Other:_____

Condition of Cooler/Containers

Sample(s) received in Cooler? ☑ Yes ☐ No *If yes:* Cooler ID:

Multiple Coolers? ☑ Yes ☐ No *If yes:* Cooler # 3 of 4

Cooler Custody Seals Present? ☐ Yes ☑ No *If yes:* Cooler custody seals intact? ☐ Yes ☐ No

Sample Custody Seals Present? ☐ Yes ☑ No *If yes:* Sample custody seals intact? ☐ Yes ☐ No

Trip Blank Present? ☑ Yes ☐ No *If yes:* Which VOA samples are in cooler? ↓

HA-10-1, 3, 11-1, 3, 12-1, 3, 13-1, 3

Temperature Record

Coolant: ☑ Wet ice ☐ Blue ice ☐ Dry ice ☐ Other:_____ ☐ NONE

Thermometer ID: CC | Correction Factor (°C): 0

• Temp Blank Temperature – If no temp blank, or temp blank temperature above criteria, proceed to Sample Container Temperature

Uncorrected Temp (°C): 4.3 | Corrected Temp (°C): 4.3

• Sample Container Temperature

	CONTAINER 1	CONTAINER 2
Container(s) used:		
Uncorrected Temp (°C):		
Corrected Temp (°C):		

Exceptions Noted

1) If temperature exceeds criteria, was sample(s) received same day of sampling? ☐ Yes ☐ No
   a) *If yes:* Is there evidence that the chilling process began? ☐ Yes ☐ No

2) If temperature is <0°C, are there obvious signs that the integrity of sample containers is compromised? (e.g , bulging septa, broken/cracked bottles, frozen solid?) ☐ Yes ☐ No

NOTE: If yes, contact PM before proceeding If no, proceed with login

Eurofins – Cleveland Sample Receipt Form/Narrative **Login # :** _____
Barberton Facility

Client Eurofins Site Name _____ Cooler unpacked by:

Cooler Received on 4/23/26 Opened on 4/23/26

FedEx: 1st Grd Exp UPS FAS Waypoint Client Drop Off Eurofins Courier Other _____

Receipt After-hours: Drop-off Date/Time _____ Storage Location _____

Eurofins Cooler # _____ Foam Box Client Cooler Box Other _____

Packing material used: Bubble Wrap Foam Plastic Bag None Other _____

COOLANT: Wet Ice Blue Ice Dry Ice Water None

1. Cooler temperature upon receipt ☑ See Multiple Cooler Form

IR GUN # 02 (CF -0.1 °C) Observed Cooler Temp. ____.____ °C Corrected Cooler Temp. ____.____ °C

2. Were tamper/custody seals on the outside of the cooler(s)? If Yes Quantity 1	Yes	No
-Were the seals on the outside of the cooler(s) signed & dated?	Yes	No NA
-Were tamper/custody seals on the bottle(s) or bottle kits (LLHg/MeHg)?	Yes	No
-Were tamper/custody seals intact and uncompromised?	Yes	No NA
3. Shippers' packing slip attached to the cooler(s)?	Yes	No
4. Did custody papers accompany the sample(s)?	Yes	No
5. Were the custody papers relinquished & signed in the appropriate place?	Yes	No
6. Was/were the person(s) who collected the samples clearly identified on the COC?	Yes	No
7. Did all bottles arrive in good condition (Unbroken)?	Yes	No
8. Could all bottle labels (ID/Date/Time) be reconciled with the COC?	Yes	No
9. For each sample, does the COC specify preservatives (Y/N), # of containers (Y/N), and sample type of grab/comp(Y/N)?		
10. Were correct bottle(s) used for the test(s) indicated?	Yes	No
11. Sufficient quantity received to perform indicated analyses?	Yes	No
12. Are these work share samples and all listed on the COC?	Yes	No
If yes, Questions 13-17 have been checked at the originating laboratory.		
13. Were all preserved sample(s) at the correct pH upon receipt?	Yes	No NA pH Strip Lot# HC574455
14. Were VOAs on the COC?	Yes	No
15. Were air bubbles >6 mm in any VOA vials? ● ← Larger than this.	Yes	No NA
16. Was a VOA trip blank present in the cooler(s)? Trip Blank Lot# _____	Yes	No
17. Was a LL Hg or Me Hg trip blank present? _____	Yes	No

Tests that are not checked for pH by Receiving:
VOAs
Oil and Grease

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

Job Narrative
310-330206-2

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 4/22/2026 1:20 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 1.9°C, 4.0°C, 4.3°C and 5.1°C.

PFAS
Method 1633A: The continuing calibration verification (CCV) recovered outside of control limits for IDA compound(s) (flagged). Section 14.3.3 of the finalized EPA 1633 states that the recovery of target analytes for the CCV(s) must be within 70 - 130%, unless the analyte is not of concern for a given project. Since target analyte(s) associated with this IDA are within spec, data is reported. The following sample is impacted: HA-07-2.5 (310-330206-16).

Method 1633A: The continuing calibration verification (CCV) recovered outside of control limits for IDA compound(s) (flagged). Section 14.3.3 of the finalized EPA 1633 states that the recovery of target analytes for the CCV(s) must be within 70 - 130%, unless the analyte is not of concern for a given project. Since target analytes associated with this IDA are within spec, data is reported. The following sample is impacted: HA-07-1 (310-330206-15).

Method 1633A: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the Continuing Calibration Blank (CCB). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries. The CCB is non- detect for associated target analyte(s), therefore, the associated samples are reported. The following sample is affected: HA-07-1 (310-330206-15).

Method 1633A: The continuing calibration verification (CCV) associated with batch 240-699825 recovered above the upper control limit for Nonafluoro-3,6-dioxaheptanoic acid (NFDHA). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are:HA-08-1 (310-330206-1), HA-08-3 (310-330206-2), HA-01-3 (310-330206-12), HA-02-1 (310-330206-13) and HA-02-3 (310-330206-14).

Method 1633A: The continuing calibration verification (CCV) recovered outside of control limits for IDA compound(s) (flagged). Section 14.3.3 of the finalized EPA 1633 states that the recovery of target analytes for the CCV must be within 70 - 130%, unless the analyte is not of concern for a given project. Since target analyte(s) associated with this IDA are within spec, data is reported. The following samples are impacted: HA-08-1 (310-330206-1), HA-08-3 (310-330206-2), HA-01-3 (310-330206-12), HA-02-1 (310-330206-13) and HA-02-3 (310-330206-14).

Method 1633A: The low level continuing calibration verification (CCVL) associated with batch 240-699827 recovered outside of control limits for IDA compound(s) (flagged). Section 14.3.3 of the finalized EPA 1633 states that the recovery of target analytes for the CCV(s) must be within 70 - 130%, unless the analyte is not of concern for a given project. Since target analytes associated with this IDA are within spec, data is reported.

Method 1633A: The continuing calibration verification (CCV) associated with batch 240-700756 recovered above the upper control limit for 3-Perfluoropropylpropanoic acid (3:3 FTCA). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Definitions/Glossary

Client: Short Elliott Hendrickson, Inc. dba SEH
Job ID: 310-330206-2
Project/Site: Duluth Airport Taxiway A

Qualifiers

LCMS

Qualifier	Qualifier Description
I	Ion ratio outside limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Method: 1633A - Per- and Polyfluoroalkyl Substances by LC/MS/MS, 1633A

Lab Sample ID: MB 240-699386/1-A
Matrix: Solid
Analysis Batch: 699448

Client Sample ID: Method Blank
Prep Type: Total/NA
Prep Batch: 699386

Cooler/Sample Receipt and Temperature Log Form

Client Information

Client: SEH

City/State: CITY | STATE | Project:

Receipt Information

Date/Time Received: DATE 4.22.26 | TIME 1320 | Received By: PH

Delivery Type: ☐ UPS ☐ FedEx ☐ FedEx Ground ☐ US Mail ☐ Spee-Dee
☑ Lab Courier ☐ Lab Field Services ☐ Client Drop-off ☐ Other:_____

Condition of Cooler/Containers

Sample(s) received in Cooler? ☑ Yes ☐ No *If yes:* Cooler ID:

Multiple Coolers? ☑ Yes ☐ No *If yes:* Cooler # 1 of 4

Cooler Custody Seals Present? ☐ Yes ☑ No *If yes:* Cooler custody seals intact? ☐ Yes ☐ No

Sample Custody Seals Present? ☐ Yes ☑ No *If yes:* Sample custody seals intact? ☐ Yes ☐ No

Trip Blank Present? ☑ Yes ☐ No *If yes:* Which VOA samples are in cooler? ↓

HA-03-1, 01-3, 02-1,3, 07-1, 2.5, 09-1,3

Temperature Record

Coolant: ☑ Wet ice ☐ Blue ice ☐ Dry ice ☐ Other:_____ ☐ NONE

Thermometer ID: CC | Correction Factor (°C): 0

• Temp Blank Temperature – If no temp blank, or temp blank temperature above criteria, proceed to Sample Container Temperature

Uncorrected Temp (°C): 5.1 | Corrected Temp (°C): 5.1

• Sample Container Temperature

	CONTAINER 1	CONTAINER 2
Container(s) used:		
Uncorrected Temp (°C):		
Corrected Temp (°C):		

Exceptions Noted

1) If temperature exceeds criteria, was sample(s) received same day of sampling? ☐ Yes ☐ No
   a) *If yes:* Is there evidence that the chilling process began? ☐ Yes ☐ No

2) If temperature is <0°C, are there obvious signs that the integrity of sample containers is compromised? (e g , bulging septa, broken/cracked bottles, frozen solid?) ☐ Yes ☐ No

NOTE: If yes, contact PM before proceeding. If no, proceed with login

Trip Blank Present? ☑ Yes ☐ No *If yes:* Which VOA samples are in cooler? ↓

HA-08-1, 3, 06-1, 3, 05-1, 3, 04-1, 3, 03-3, 01-1

Temperature Record

Coolant: ☑ Wet ice ☐ Blue ice ☐ Dry ice ☐ Other:_____ ☐ NONE

Thermometer ID: CC | Correction Factor (°C): 0

• Temp Blank Temperature – If no temp blank, or temp blank temperature above criteria, proceed to Sample Container Temperature

Uncorrected Temp (°C): 4.0 | Corrected Temp (°C): 4.0

• Sample Container Temperature

	CONTAINER 1	CONTAINER 2
Container(s) used:		
Uncorrected Temp (°C):		
Corrected Temp (°C):		

Exceptions Noted

1) If temperature exceeds criteria, was sample(s) received same day of sampling? ☐ Yes ☐ No
   a) *If yes:* Is there evidence that the chilling process began? ☐ Yes ☐ No

2) If temperature is <0°C, are there obvious signs that the integrity of sample containers is compromised? (e.g., bulging septa, broken/cracked bottles, frozen solid?) ☐ Yes ☐ No

NOTE. If yes, contact PM before proceeding If no, proceed with login

Job Number: 310-330206-2

Login Number: 330206

List Source: Eurofins Cedar Falls

List Number: 1

Creator: Homolar, Dana J

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

This receipt checklist is generated for all samples received in this Login. It may not be applicable to all Jobs associated with this Login.

Response Action Plan/Construction Contingency Plan - Taxiway A Reconstruction - Phase 7

Duluth International Airport

Prepared for the Duluth Airport Authority

1 Introduction

Short Elliott Hendrickson Inc. (SEH®) was retained by the Duluth Airport Authority (DAA) to develop a Response Action Plan (RAP)/Construction Contingency Plan (CCP) that will be implemented during the Taxiway A Reconstruction – Phase 7 project located at the Duluth International Airport (DLH) in Duluth, St. Louis County, Minnesota (herein referred to as the "Site"). The Site location is presented on **Figure 1.**

Taxiway A is the parallel taxiway for the main runway (Runway 9/27) serving the DLH. The existing Taxiway A is approximately 10,700 feet in length and the reconstruction is proposed to be completed in nine phases.

Phase 7 of the Taxiway A Reconstruction project will include the reconstruction and realignment of Taxiway A1 and A2, which joins Runway 9/27 with Taxiway A. Phase 7 of the project will also include the dredging of an existing sedimentation stormwater pond north of the airport, and the expansion of an existing stormwater pond southeast of the DLH terminal building. The project areas are shown on **Figure 2**.

An environmental investigation was completed in preparation for the Taxiway A Reconstruction - Phase 7 project (SEH, 2026) and is discussed in **Section 2**.

1.1 Response Action Plan Scope and Objectives

The RAP/CCP addresses contamination issues that are anticipated to be encountered during the project. Following reconstruction, the Site will continue to be used for commercial air traffic use.

The objective of the RAP is to manage contaminated materials at the Site in a manner that protects human health, welfare and the environment from releases or threatened releases of hazardous substances, pollutants, or contaminants. The RAP provides a description of the actions that will be taken to handle and dispose of contaminated materials so that contamination is not exacerbated by the project construction activities.

Any unanticipated/unidentified contaminated materials encountered during construction will be evaluated using the Minnesota Pollution Control Agency's (MPCA's) risk-based approach and will be managed in accordance with the CCP.

The scope of the RAP is limited to construction-related actions. Response actions are not intended to remediate the entirety of the Site (although, as with any construction project, beneficial remediation will occur through the excavation and disposal of contaminated materials as part of the construction process). Contaminated materials that are not disturbed by the project because they are outside project excavation areas will remain in-place.

1.2 Limitations

Design for the Taxiway A Reconstruction – Phase 7 project are currently at 95% of the design phase. Select plan sheets are included as **Appendix A**.

The scope of the RAP is limited, in that anticipated contaminated materials may change during construction; however, the RAP can still meet its main objective which is to provide a description of the actions that will be taken to complete the project in a manner that protects human health, welfare and the environment from releases or threatened releases of hazardous substances, pollutants, or contaminants.

1.3 Responsibilities

The following parties and their representatives are those currently involved in development of the Project:

Project Owner and Occupant:
DAA
4701 Grinden Drive
Duluth, MN 55811
Contact: Ryan Welch
(218) 625-7767
rwelch@duluthairport.com

Environmental Consultant:
Short Elliott Hendrickson, Inc.
3535 Vadnais Center Drive
Vadnais Heights, Minnesota 55110
Contact: Keri Aufdencamp
(651) 318-0354
kaufdencamp@sehinc.com

General Contractor
To be determined

Disposal Facility
To be determined

2 Project Site Background

2.1 Project Site Location and Description

The Site is located in Duluth, St. Louis County, Minnesota and includes portions of the following parcel identification numbers (PINs):

- 010-2747-00160

- 010-2747-00210
- 010-2747-00220
- 280-0031-00455
- 280-0031-00456
- 395-0010-00330
- 395-0010-00348
- 395-0010-00349
- 395-0010-00350
- 395-0010-00550

The Site is developed with an air traffic taxiway and stormwater ponds. The remainder of the Site is undeveloped and consists of maintained greenspace (see **Figure 2**). The airport land use is considered industrial.

Taxiway A Reconstruction Area, the Terminal Stormwater Pond Expansion Area, and the Northern Stormwater Pond Dredge project areas are generally located in the western, southeastern, and northern parts of the DLH respectively (The extent of the project areas are depicted on **Figure 2**).The Site is bordered to the north by Runway 9/27, to the east by extensions of the existing Taxiway A, and to the west and south by maintained greenspace and the airport perimeter roads.

2.2 Findings of the Taxiway A Reconstruction - Phase 7 Environmental Investigation

The DLH includes the base of the Minnesota Air National Guards (ANG's) 148th Fighter Wing (FW). The 148th FW facilities are located on leased properties at several locations in the vicinity of the main east-west runway at the DLH and the main base is located on the eastern side of the DLH. The 148th FW base houses aircraft, vehicles, and equipment. Current and past operations at the base have involved the use of products such as fuels, oils, lubricants, paints, paint thinners, solvents, and aqueous film forming foam (AFFF).

A base-wide per- and polyfluoroalkyl substances (PFAS) Remedial Investigation (RI) is currently on-going at the DLH as the Minnesota ANG is evaluating PFAS impacts through a similar process used under the Installation Restoration Program (IRP) and consistent with the provisions of Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), as amended. Based on a review of the interim results provided by the Minnesota ANG, several detections of perfluorooctanoic acid (PFOA) and perfluorodecanoic acid (PFDA) exceeding their respective MPCA Soil Leaching Values (SLVs), Commercial/Industrial Soil Reference Values (ISRVs) and/or Residential/Recreational SRVs (RSRVs) were located either within or adjacent to the Taxiway A Reconstruction and Northern Stormwater Pond Dredge portions of the project Site.

This investigation was performed to investigate the Site for the presence of contaminated soil that may be encountered during project construction-related activities and to provide necessary data for the development of a RAP/CCP, as needed. Drilling and sampling was completed on April 20 and 21, 2026.

The Environmental Investigation included thirteen hand auger soil borings (HA-01 through HA-13) completed to depths ranging between 3 to 5 feet below ground surface (bgs). Three sediment

samples were collected of the dredge material in the Northern Stormwater Pond as well as a surface water sample. The borings were completed along the existing Taxiway A, which will be reconstructed, in areas where the taxiway will be extended or where taxiway connector pavements will be constructed within the Phase 7 construction area, as well as around the footprint of the proposed stormwater pond expansion southeast of the DLH terminal building. Fill material was encountered throughout the borings extending to 5 feet bgs. No debris was observed. PID headspace readings were recorded between 0.0 to 2.1 parts per million (ppm), within background levels. No visual or olfactory indications of contamination were noted during the investigation.

Groundwater was not encountered while drilling. However, surface water located in the Northern Stormwater Pond contains PFAS contaminants above regulatory levels that will require proper management.

On the western extent of the Taxiway A area, PFDA (up to 9.24 nanograms per gram [ng/g]) and PFOA (4.34 ng/g) exceeded the MPCA ISRVs in boring HA-01 at depths ranging from 1 to 3 feet bgs. Perfluorooctanesulfonic acid (PFOS - up to 180 ng/g) and PFOA (0.366 ng/g) exceeded the MPCA RSRVs in borings HA-01 (at 1 and 3 feet bgs) and HA-02 (at 1 foot bgs). However, no exceedances were identified at 3 feet bgs in HA-02. All other PFAS analytes in HA-01, HA-02, and HA-03 were below their respective laboratory reporting limits (RLs). On the eastern extent of the Taxiway A area, PFOS (up to 27.4 ng/g) and PFOA (up to 1.24 ng/g) exceeded the MPCA RSRVs in borings HA-09 (at 1 and 3 feet bgs) and HA-07 (at 1 and 3 feet bgs). All other PFAS analytes in HA-06, HA-07, HA-08, and HA-09 were below their respective RLs.

Soil encountered elsewhere during this Phase II Environmental Investigation met MPCA Unregulated Fill Criteria (UFC), SRVs, and Soil Leaching Value (SLVs). The results from the 2026 Phase II Environmental Investigation are included as **Figure 3**.

3 Proposed Project

Taxiway A is the parallel taxiway for the main runway (Runway 9/27) serving the DLH. The existing Taxiway A is approximately 10,700 feet in length and the reconstruction is proposed to be completed in nine phases, based on the result of the 2021 DLH Airport Master Plan and discussions with the DAA and Federal Aviation Administration (FAA). The overall reconstruction project includes realignment of the taxiway in the same general area as the existing Taxiway A. The Phase 7 project will also include the reconstruction and realignment of Taxiway A1 and Taxiway A2, which join Runway 9/27 with Taxiway A to meet current FAA design standards, which include having a right-angle intersection with the runway. The project also includes the expansion of the existing stormwater pond southeast of the DLH Terminal, and the dredging of the existing Northern Stormwater Pond to expand capacity.

The project work will include removal of existing airfield pavements, concrete taxiway pavement installation, asphalt shoulder pavement construction, and storm sewer infrastructure and drainage improvements. Taxiway edge lighting, airfield signage, and related airfield electrical circuits will be reconstructed with this project. Project work will also include turf establishment and installation of airfield pavement markings.

This RAP/CCP pertains to the excavation and construction activities associated with the reconstruction of Taxiway A and the dredging of the existing Northern Stormwater Pond.

The extent of the Phase 7 project this RAP/CCP covers is depicted on **Figure 2**. Select plan sheets are included as **Appendix A**.

4 Site Conceptual Model and Cleanup Objectives

4.1.1 Soil Regulatory Limits and Cleanup Criteria

Soil results are compared to MPCA 2026 RSRVs, ISRVs, the MPCA 2013 SLVs, and the MPCA UFC.

4.1.1.1 Soil Reference Values

Revised Residential/Recreational and Commercial/Industrial SRVs were published by the MPCA in May 2026 (MPCA, May 2026) and are incorporated into this report. The MPCA intends to complete annual updates to the SRVs. The MPCA SRVs are intended to be risk-based screening values and were derived using methodology from the Environmental Protection Agency's (EPA's) Superfund Program, exposure parameters based on land use categories, contaminants toxicity values, and a contaminant's chemical-specific parameters.

4.1.1.2 Screening Soil Leaching Values

The MPCA has established SLVs that provide a conservative estimate of whether groundwater contaminant concentrations could result from leaching to groundwater from contaminated soils in direct contact with groundwater. The current Screening SLVs were established in 2013 (as discussed in MPCA Guidance Document c-r1-04 [MPCA, May 2013]) and are referenced in the MPCA Guidance Document c-rem1-01, Best Management Practices for the Off-Site Reuse of Unregulated Fill (MPCA, March 2024).

4.1.1.3 MPCA Unregulated Fill Criteria

The MPCA has defined limits for diesel range organics (DRO) and gasoline range organics (GRO) of 100 milligrams per kilogram (mg/kg) in soil in MPCA Guidance Document c-rem1-01, Best Management Practices for the Off-Site Reuse of Unregulated Fill (MPCA, March 2024). The guidance document defines soil that meets these limits, is free from solid waste, debris, asbestos-containing material (ACM), visual staining and odors, and has organic vapors less than 10 ppm (measured using a photoionization detector [PID]) is considered unregulated fill. ACM is material containing greater than 1% asbestos, as defined in Minnesota Statutes, Section 326.71, Subdivision 3. To assess the potential for unregulated off-site use of excess excavated material from the project, Phase II Environmental Investigation results are evaluated using this guidance.

The project Site land use is considered to be industrial and the cleanup objectives for the project include implementation of response actions to allow for site use that is consistent with the existing site use (Taxiway A Reconstruction Area will continue to be used for aircraft transportation/staging, the Northern Stormwater Pond Dredge Area will continue being used as a stormwater pond, etc.). Therefore, the MPCA 2026 ISRVs, UFC and 2013 SLVs (for volatile organic compounds [VOCs]) will be used to guide decisions regarding soil cleanup.

The cleanup objectives also include proper management of soil to be exported from the Site to accommodate the proposed development in accordance with MPCA Best Management Practices. Decisions regarding offsite re-use will be made using the MPCA's Best Management Practices for the Off-Site Reuse of Unregulated Fill (MPCA, March 2024).

4.1.2 Water Regulatory Limits and Cleanup Criteria

During the Phase II Environmental Investigation (SEH, 2026), surface water was sampled within the proposed Northern Stormwater Pond Dredge area.

The Phase II Environmental Investigation compared surface water analytical results to Minnesota Department of Health (MDH) Health Based Guidance (HBGs) that have been established to evaluate drinking water. The HBGs include Health Risk Limits (HRLs), Health Based Values (HBVs), and Risk Assessment Advice (RAAs) levels. The HBGs also reference to the EPA Maximum Contaminant Levels (MCLs) where State HRLs, HBVs, and RAAs are not established. Surface water results are also compared to the National Pollutant Discharge Elimination System (NPDES) Groundwater Pump-Out General Permit (MNG790000) which identifies limits for discharge of contaminated groundwater. The general permit regulates the discharge of groundwater extracted at cleanup and redevelopment sites. This includes discharges which have been contaminated by past or present activities, from both known and previously undiscovered sources of contamination. The Phase II Environmental Investigation also used NPDES General Permit Limits (GPLs) for general comparative purposes for surface water contaminant concentrations.

4.2 Physical Setting

The Taxiway A – Phase 7 alignment is the furthest west portion of the existing Taxiway A, which sits directly south of Runway 9/27. The high spot at the project Site, at an approximate elevation of 1420 feet above mean sea level (amsl). The taxiway gently slopes to the southeast and a low area is located east of the taxiway at an approximate elevation of 1410 feet above mean sea level (amsl).

The Northern Stormwater Pond is located approximately 0.7 miles north of Runway 9/27, directly north of Warhawk Drive. The area currently consists of a 200 foot by 135 foot stormwater pond with a gravel access road running north from the gate at the end of Warhawk Drive. Stormwater is carried to the existing pond via a drainage channel that runs south to north from the airport.

4.3 Occurrence of Regulated Soil/Material

Based on the 2026 Environmental Investigation (SEH, 2026), the occurrence of regulated soil is limited at the Taxiway A Reconstruction – Phase 7 Site. The investigation identified PFAS impacts to soils exceeding MPCA ISRVs in portions of the Site on the western side of the existing Taxiway A1. The soils were encountered above the ISRVs up to 5 feet bgs directly west of the existing Taxiway A1. Soil excavated from this area is classified as Industrial SRV Exceedance Soil (see **Section 5.1**) and will be handled as described in **Section 5.3.3**.

Soils exceeding the MPCA RSRVs, but below MPCA ISRVs, were identified on the western and eastern extent of the Taxiway A Reconstruction Area. Soil samples taken directly east of Taxiway A1 up to 2 feet bgs contain concentrations of PFAS that exceed MPCA RSRVs. Soil samples taken from soils up to 5 feet bgs on the eastern side of the site (directly west and east of Taxiway A2) contain concentrations of PFAS that exceed MPCA RSRVs. Soil excavated from these areas are classified as Regulated Soil (see **Section 5.1**) and will be handled as described in **Section 5.3.2**.

If chemical impacts to soil other than those associated with the known PFAS impacts are encountered during project excavations, the CCP presented in **Section 7.0** will be implemented.

4.4 Occurrence of Groundwater Impacts

Based on the excavation depths and results of previous environmental investigations, there is potential that groundwater will be encountered within the Taxiway A Reconstruction Area. Groundwater was not encountered during the 2026 Phase II Environmental Investigation and if dewatering is necessary, the CCP presented in **Section 7.0** will be implemented.

4.5 Occurrence of Surface Water Impacts

Based on the 2026 Environmental Investigation, surface water in the existing Northern Stormwater Pond has PFAS impacts exceeding both the MDH HBGs and EPA MCLs. Dredging activities that occur at the Northern Stormwater Pond will need to be properly managed. If dewatering is necessary, the CCP presented in **Section 7.0** will be implemented.

5 Response Actions

5.1 Soil Management Categories

Based on the Phase II Environmental Investigation, soil within the project Site can be grouped into the following three general categories 1) Unregulated Soil, 2) Regulated Soil, and 3) ISRV Exceedance Soil as defined below:

- Unregulated Soil – meets the MPCA definition of unregulated fill discussed (also includes non-impacted, naturally occurring native soil).
- Regulated Soil – exceeds the MPCA definition of unregulated fill but is also characterized by the following:
  - Soil analytical concentrations less than SLV
  - Soil analytical concentrations exceeding 2026 residential SRVs, but less than the 2026 Commercial/Industrial SRVs.
  - PID soil headspace results less than 200 ppm.
  - Debris less than 5% of total volume of soil. For reuse, debris > 5% must be geotechnically suitable for reuse and meet a MPCA Standing Beneficial Use Determination (SBUD). No regulated materials (i.e., asbestos) are allowed.
- Industrial SRV Exceedance Soil – exceeds the following criteria:
  - Soil analytical concentrations exceed the 2026 Commercial/Industrial SRVs.
  - PID soil headspace results exceed 200 ppm.
  - Debris greater than 5% of total volume of soil. Uncontaminated concrete, brick or bituminous may be segregated for reuse in accordance with MPCA SBUD.

5.1.1 Phase II Investigation Results and RAP Management Areas

5.1.1.1 Unregulated Soil

Unregulated soil encountered during the Phase II Environmental Investigation (SEH, 2026) are depicted by green shading on **Figure 3**.

5.1.1.2 Regulated Soil

Regulated soil areas were identified in the Phase II Investigations with soil analytical results above unregulated soil criteria. The types or levels of contamination in these areas cannot readily

be detected by field screening methods; therefore, the fate of the soil is determined from the results of the Phase II Investigation. All excavated soil from these areas are classified as regulated soil.

Regulated soil was identified at the following locations:

- HA-02 – PFAS related compounds (specifically PFOA) from 0 to 3 feet bgs.
- HA-07 – PFAS related compounds (specifically PFOS and PFOA) from 0 to 5 feet bgs.
- HA-09 – PFAS related compounds (specifically PFOS and PFOA) from 0 to 5 feet bgs.

Regulated soil areas are depicted with yellow shading on the attached **Figure 3**. The extent of impacts in this area have not yet been fully defined and the area will be delineated by an additional test pit investigation (see **Section 5.2**).

5.1.1.3 Industrial Exceedance Soil

During the Phase II Investigation, only one sample location (HA-01), located adjacent to the southwest of Taxiway A1, identified soil that exceeded the MPCA ISRVs. The extent of impacts in this area have not yet been fully defined and the area will be delineated by an additional test pit investigation (see **Section 5.2**).

Soils with PID headspace results greater than 200 ppm were not encountered during the Phase II investigation and are not anticipated to be encountered during the project construction activities.

Areas with debris at quantities > than 5% were also not encountered during the Phase II investigation and are not anticipated to be encountered during the project construction activities.

For areas with debris at quantities > than 5%, uncontaminated concrete, brick or bituminous may be segregated for reuse in accordance with MPCA SBUD

The industrial exceedance soil area is depicted with red shading on the attached **Figure 3**.

5.2 Test Pit Investigation

Prior to the start of the project grading activities within the Taxiway A Reconstruction Area, delineation test pit excavations will be excavated at a radius of 25 feet, 50 feet, and 75 feet from previously completed sample locations HA-01, HA-02, HA-07, HA-09 to the north, south, east, and west.

Because sample location BGSL-11 was completed to the south of the proposed Taxiway A Reconstruction Area. Delineation test pit excavations will be excavated at a radius of 25 feet, 50 feet, and 75 feet from the southern project boundary to the northeast and northwest.

The following table depicts the location of the previously completed sample locations that the test pit investigation will be completed from:

BORING ID	UTM Zone 15 N (meters)		NAD 1983 HARN Adj MN St. Louis South (US Feet)	
	Easting	Northing	Easting	Northing
HA-01	559423.173905	5187790.815921	557390.920042	169754.930666
HA-02	559525.524249	5187854.395694	557728.306591	169961.25678
HA-07	560058.614975	5187829.496995	559477.403271	169867.293716
HA-09	560157.635038	5187807.270878	559801.888574	169792.070967
BGSL-11	559633.23123	5187724.405659	558078.828856	169532.140058

Depth delineated samples will be collected at 1 and 3 feet bgs for locations HA-01, HA-07, and HA-09, as impacts exceeding either the ISRV and/or the RSRV were identified at both 1 and 3 feet bgs. Samples will be collected 1 foot bgs for location HA-02, as impacted exceeding the RSRV were only identified at 1 foot bgs. Similarly, samples will be collected 0.5 feet bgs for location BGSL-11, as impacts exceeding the RSRV were only identified at 0.5 feet bgs. The following table describes the proposed test pit investigation sampling methodology:

Location	Test Pit Radii	Sample Depth Per Test Pit Excavation	Test Pit Directions
HA-01	25 feet, 50 feet, and 75 feet	1 and 3 feet bgs	North, South, East, and West
HA-02		1 and 3 feet bgs	North, South, East, and West
HA-07		1 and 3 feet bgs	North, South, East, and West
HA-09		1 foot bgs	North, South, East, and West
BGSL-11		0.5 feet bgs	Northeast and Northwest

Additional samples will be held by the analytical laboratory pending the results from the initial locations. Samples will be analyzed until test results indicate the material is indicative of an unregulated fill in that sample direction.

The test pit excavations will be completed to collect soil samples for field screening and chemical analyses for PFAS by EPA method 1633A. Results received will be compared to the UFC and decisions regarding re-use or disposal will be made using the criteria in **Section 5.2**.

A discussion on sampling methods, results, and implantation changes will be provided in the RAP Implementation Report.

5.3 Soil Disposition

The following sections describe response action details for each soil category.

5.3.1 Unregulated Soil – Unrestricted Reuse On- or Off-Site

Unregulated Soil (including naturally-occurring native soil) will be managed as unrestricted reuse material both within the project Site, and potentially as excess material off-site at the discretion of the contractor.

Any soil that meets Unregulated Soil Criteria but is not geotechnically suitable for the project design requirements will become the property of the contractor for unrestricted use off-site.

5.3.2 Regulated Soil – Restricted Reuse On-site

Regulated soil will be managed as restricted reuse on-site within the project area from which it originated.

- Soil should be reused within the project area in a nearby location with a similar analytical signature.
- Soil with elevated PID headspace readings (greater than 10 ppm but less than 200 ppm) should be thin spread under pavement or placed below four feet of clean cover in green space areas. Soil with PID headspace readings exceeding 10 ppm are not anticipated to be encountered during the project construction activities. Soil with PID headspace readings exceeding 10 ppm will not be utilized within a utility corridor

Any regulated soil that cannot be reused on-site or is geotechnically unsuitable for Project design requirements (or contains regulated materials) will be designated as contaminated material for landfill disposal and will be disposed of at a Minnesota-permitted landfill.

5.3.3 Industrial Exceedance Soil – Landfill Disposal

Industrial exceedance soil will be managed as contaminated material and will be disposed of at a Minnesota-permitted landfill. Industrial exceedance soil is prohibited from reuse on or off the project Site.

5.4 Surface Water Response Actions

The proposed project includes dredging a portion of the Northern Stormwater Pond. The proposed dredging area is depicted on **Figure 3**. Based on the results of the Phase II Investigation, surface water generated during dredging is contaminated with various PFAS compounds.

Prior to the start of dredging activities, the contractor shall implement best management practices sufficient to restrict excess surface water generated from the dredging activities to prevent an unauthorized release. All surface water generated during dredging shall be managed in an appropriate manner that prevents infiltration to the ground surface or discharge to infrastructure. Standard Operating Procedures and Methods

The following sections outline the Standard Operation Procedures (SOPs) and methods that will be instituted during the project.

5.5 Project Coordination

SEH environmental staff assigned to the project will coordinate with the owner's representative, the project team, general contractor, and excavation contractor regarding the construction schedule and logistics related to implementing this RAP. The SEH environmental staff will also communicate with the owner's representative, the project team, site contractors, the MPCA, and other interested parties as necessary regarding the environmental monitoring results and any necessary environmental actions.

5.6 Site Health and Safety

The environmental staff involved in monitoring and sampling activities will be required to meet the training requirements of 29 Code of Federal Regulations (CFR) 1920.120. Specifically, each person will have completed an Occupational Safety & Health Administration (OSHA) certified 40 Hour Hazardous Waste Operations and Emergency Response (HAZWOPER) safety course. In addition, they will have experience in directing contaminated material excavation and be competent in proper screening and sampling procedures.

Prior to the start of the project, the environmental consultant will prepare a Site Health and Safety Plan (SHSP) for use by their personnel. The SHSP will assign responsibilities, establish personal protection standards and safety practices and procedures, and provide for contingencies that may arise during site operations. The SHSP procedures will be based on the site conditions and chemical hazards known or expected to be present at the site using site data available at the time it is written. The SHSP is subject to revision when deemed necessary by actual site conditions encountered during field activities.

The contractor(s) selected for the project will be provided with the environmental reports completed for the project. The contractor(s) will be required to complete a SHSP and comply with all applicable safety regulations imposed by federal and state law for handling pollutants, contaminants, hazardous substances, wastes or materials. Contractor personnel involved with contaminated materials will be expected to be familiar with and to meet applicable Minnesota OSHA requirements.

If encountered, asbestos-related work will be conducted by MDH certified personnel operating under State and Federal regulations. When asbestos-related work is being conducted, environmental consultants will be required to have their valid MDH Asbestos Inspector certification (or higher-level credentials) on-site and available when completing monitoring and sampling activities.

5.7 Excavation, Hauling and Disposal

At a minimum, requirements for excavation, hauling, and disposal will be as follows:

The contractor will be responsible for controlling fugitive dust and minimizing noise, odors, and off-site tracking to the extent possible.

- When applicable, excess impacted soil or waste materials will be removed from trucks prior to leaving the site. If necessary, trucks used to transport contaminated soil may require decontamination prior to leaving the site, in order to minimize the tracking of contaminants off-site. If so, a decontamination pad will be constructed at a designated location, just prior to exiting the project area. Prior to demobilization from the project area, all on-site equipment used for excavation will be decontaminated.
- Designated truck routes will be used, so as to minimize the disruption of the site and limit exposure to the public.
- The contractor will be responsible for properly manifesting all waste or impacted soil which leaves the project.
- The contractor will be responsible for taking the appropriate measure to ensure excavations are appropriately secured at the end of work each day.
- All activities will be conducted in compliance with Local, State and/or Federal Laws.

In the event that ACM or asbestos containing waste material (ACWM) is identified, those materials will be segregated, placed on and covered with plastic sheeting. While general procedures will be conducted as described above, the following is required for areas with ACM/ACWM:

- A designated exclusion zone will be established, and all personnel will be required to wear Level C personal protective equipment (PPE), including Tyvek suits and respiratory protection.
- Excavation, loading and transport of ACM/ACWM must be completed under the direction of a Minnesota MDH certified asbestos supervisor, after the appropriate MDH notifications have been filed with the MDH.
- The excavation contractor will be required to use a fire hose to spray dry material with water as it is removed to prevent visible emissions.
- Trucks or roll off boxes must be lined with plastic sheeting, before wrapping and sealing them, prior to transport to the Minnesota-permitted landfill for disposal.

5.7.1 Field Screening of Excavated Material

During excavation activities in areas with identified soil impacts, an environmental consultant will be on-site to conduct environmental monitoring. An environmental consultant will also be on-call to travel to the site to conduct screening should unexpected suspect contaminated materials be encountered. A certified asbestos inspector will be on call for sampling of suspect ACM, if observed.

Soils will be observed for the presence of visual and olfactory indications of contamination. Soil from excavations will be field screened with a PID as well as visual inspections for potential ACM, debris, staining, petroleum odors, etc. As the soil is excavated, it will be placed at the surface adjacent to the excavation for screening. The environmental technician will screen excavated soil for contaminants using a combination of techniques:

- Headspace monitoring will be completed in accordance with MPCA methodology using a PID equipped with a 10.6 electron-volt lamp to monitor soil for the presence of organic vapors. The frequency of samples collected for headspace analysis will be based on the type of soil being excavated. The environmental consultant will determine the frequency of PID headspace sampling throughout the project area based on the homogeneity of the material being excavated, the volume and type of debris encountered and knowledge of previous investigations for the area. A minimum of one sample for headspace analysis will be collected for approximately every 10 cubic yards of soil removed. Samples may be collected with less frequency (approximately one sample for every 25 or 50 cubic yards of soil removed) in homogenous material with no visual and olfactory evidence of impacts.
- Visual observation for suspect ACM and debris during excavation tasks and screening of graded surface soil. If soil or free product is visually observed, the soil will be considered contaminated and treated as regulated fill.
- Screening results will be documented.

5.7.2 Soil Staging

To the extent possible and when applicable, soil designated for disposal will be direct loaded and hauled to a Minnesota permitted landfill. Soil that cannot be immediately hauled to the landfill will be stockpiled as detailed below.

Soil designated for reuse that cannot be immediately reused will be segregated and stockpiled on-site.

Excess unregulated fill that cannot be immediately reused will be stockpiled on or off-site for unrestricted reuse on or off-site.

5.7.3 Laboratory Testing

Additional laboratory testing may be required in the following scenarios:

If additional characterization is required by the landfill for disposal approval, samples will be collected and analyzed for the parameters required by the receiving landfill.

In the event that excavated soils are materially different from what has been observed and tested during previous evaluations (based on visual, olfactory and/or PID measurements), samples will be collected and analyzed for characterization.

Sampling procedures will follow MPCA guidelines. The samples will be analyzed for contaminants of concern as determined by the environmental consultant utilizing field observations and data from the previous investigations, potentially including, but not limited to the following parameters:

- PFAS (United States Environmental Protection Agency [EPA] Method 1633)
- DRO (Wisconsin Method DRO)
- GRO (Wisconsin Method GRO)
- DRO silica gel cleanup (Wisconsin Method DRO)
- VOCs (EPA Method 8260D)
- Polycyclic aromatic hydrocarbons (PAHs - EPA Method 8270)
- Priority Pollutant Metals or 8 Resource Conservation and Recovery Act (RCRA) Metals (EPA 6010D/7471)
- Polychlorinated biphenyls (PCBs - EPA Method 8082A)

5.7.4 Soil Stockpile Management

Excavated material that is determined to have potential chemical impacts based on field screening results will be placed in a temporary stockpile on the property. Soils with suspected different contaminants, soils exhibiting different visual or olfactory characteristics, or soils with substantially different PID readings will be placed in separate stockpiles. Contaminated materials will be covered with minimum 10-mil reinforced poly plastic sheeting as soon as work on the stockpile has been completed during the day or at a minimum at the end of each working day. The poly will be adequately secured in place. If the contaminated material is not stockpiled on an impervious surface, the stockpiles will be constructed on a minimum 10-mil reinforced poly plastic placed over smooth debris free ground. The stockpile(s) will be bermed, if necessary, to prevent storm water run-on and/or runoff.

Stockpiles will be managed either immediately adjacent to the excavation or within the project site.

If the contractor excavates wet Regulated Soil (soil with free draining liquids), the material will be placed within the excavation to drain (for example benching within the excavation) or will be placed on a single sheet of minimum 10-mil reinforced plastic (or sealed seams of plastic) with the plastic overlapping containment berms so that liquids are contained. All free liquids draining from wet Regulated Soil will either be contained by stockpiling or will remain within the excavation. If laboratory analysis of stockpiled soil is required, sample frequency will be determined based on the homogeneity of the stockpile and MPCA guidance (MPCA Guidance Document c-brwnfld4- 05, February 2025):

Cubic yards of soil in pile	Number of samples
0-500	1 per 100 cubic yards
501-1000	1 per 250 cubic yards
1001 or more	1 per 500 cubic yards

If the soil is not reasonably homogeneous, the number of samples will be adjusted to sufficiently represent the material and/or meet additional disposal requirements of the landfill.

5.7.5 Imported Fill Material

Any imported fill material must meet the MPCA qualifications for unrestricted reuse material. Material sourced from a pit or undisturbed native deposit with no indications of past sources of contamination is considered unrestricted reuse material. Material from any other source must be evaluated for potential impacts prior to import to the site. The contractor must provide sufficient evidence that material meets the unrestricted reuse criteria. Sufficient evidence includes at least one of the following, but may not be limited to the following:

- Evidence that the property is not suspect for impacts based on sufficient knowledge of past use of the property and surrounding properties.
- Analytical results that indicate that soil meets unrestricted reuse criteria established by the MPCA.
- Analytical results that indicate that soil meets restricted reuse criteria established by the MPCA and that reuse has been site-specifically and formally approved by MPCA and local authorities.

5.7.6 Site Controls

5.7.6.1 Street Sweepings

The streets will be swept as directed by the Engineer and whenever necessary to prevent the production of dust in amounts damaging to property, vegetation, animals, or persons in the vicinity of construction activity. Street sweepings will be managed appropriately: contaminated street sweepings will be disposed at a Minnesota-permitted landfill, and non-contaminated street sweepings will be reused on or off-site as determined by the Project contractor. If water is employed for equipment decontamination, it will be collected, tested and properly disposed.

5.7.6.2 Site Security

The contractor will be responsible for securing the site as described in the project specifications.

5.7.6.3 Dust Control

Methods will be employed to prevent fugitive dust emissions. Methods will include keeping exposed working areas as small as practicable during excavation and grading. Watering will be employed, as necessary, to control emissions from exposed work areas, access roads and working stockpiles. A balance will be maintained between effective dust control and making the area muddy, causing off-site tracking of contaminants.

5.7.6.4 Air Criteria

Air monitoring criteria will be outlined in the SHSP prepared for the project..

5.7.6.5 Storm Water Pollution Prevention Plan and National Pollutant Discharge Elimination System Permits

The construction contractor selected for project construction will be required to obtain a National Pollutant Discharge Elimination System (NPDES) permit and follow the Storm Water Pollution Prevention Plan (SWPPP) for management of storm water. The contractor is required to follow the Best Management Practices (BMPs) required by the permit.

6 Construction Contingency Plan

The project environmental professional/consultant will be prepared to respond if contaminated or regulated materials are unexpectedly encountered during excavation. In the event that unforeseen contaminated or regulated materials are encountered during construction, appropriate notifications will be made, and regulations followed. Previously unidentified releases to the environment will be reported to the State Duty Officer. This procedure will be used unless conditions under which there is an immediate threat to human health in which case 911 will be called and then the State Duty Officer.

The following sections outline the CCP procedures and methods that will be instituted throughout the Project.

6.1 Contamination Indicators

Indicators of potentially contaminated soil, groundwater or surface water include, but are not limited to the following:

- Odor including gasoline, diesel, creosote (odor of railroad ties), mothballs, or other chemical-like odors in soil excavation areas.
- Soil with unusual staining (such as black or green staining not associated with organic content), or with an oily appearance, or any unusual soil texture or color.
- A rainbow sheen on the surface of water (groundwater or ponded rainwater) or soil.
- Indications of a release through the use of a PID or another field screening instrument.
- Indicators of regulated wastes include, but are not limited to the following:

  - Unexpected presence of buried cans, bottles, scrap metal, wood, glass (indicates dumping/burial of solid waste and a possible dump with associated chemical contamination).
  - Unexpected presence of asphalt and concrete rubble (indicates dumping/burial of demolition waste with associated chemical contamination).
  - Shingles, roofing materials, vermiculite, transite siding, floor tiles, insulation, or any fibrous material (demolition debris that could be associated with ACM or associated contamination).
  - In-place intact active or inactive transite pipes (steam or water pipes) or conduit (contains ACM).
  - Culverts or other pipes with tar-like coating (potentially contains ACM).
  - Wood Ash (potentially contains lead, asbestos, or other chemicals) or coal ash or slag (potentially contains metals).
  - Sandblast or foundry sand residue (potentially contains lead or other metals).
  - Treated wood, including, but not limited to products referred to as brown-or green-treat, and creosote (potentially contains arsenic, chromium, copper, or PAHs).
- Chemical containers such as drums and other containers (potential source of chemical contaminants within intact containers, or surrounding damaged containers)
- Underground storage tanks (USTs)/aboveground storage tanks (ASTs) (potential source of petroleum or other chemical contaminants within intact USTs/ASTs or surrounding damaged USTs/ASTs).
- Intact filled-in basement or buried concrete slab from demolished building with insulation or intact floor tiles (potential ACM), waste traps (potentially contains oily waste), cesspools (potentially contains chemical or oil wastes) and sumps (potentially contains chemical waste).

6.2 Notification

The contractor will proceed with the following notifications in the order listed:

Contact #1: 911 (if the incident/release represents an immediate danger to life or health)

Contact #2: Project owner and environmental professional/consultant (to conduct and document a detailed inspection and evaluation of the unexpected material)

If unexpected contamination is encountered, the project owner or environmental professional/consultant will report the release to the Minnesota State Duty Officer (1.800.422.0798 or 651.649.5451).

6.3 Incident Response

If unexpected contaminated soil, water, debris, or potentially contaminated waste materials are encountered during construction, the contractor will immediately stop work in the vicinity and notify the project owner.

The contractor will not resume work in the suspect area until approved by the environmental professional/consultant. Work outside the vicinity of the suspect area may continue if the

environmental professional/consultant determines that the extent of the contamination has been defined.

The environmental professional/consultant will investigate and characterize all unexpected, contaminated soil, water, or regulated waste materials. Field screening activities will not proceed until the situation is analyzed, and health and safety considerations resolved in accordance with the SHSP. Visual and olfactory indications of contamination will be documented. Samples of the potentially impacted soil or regulated materials will be collected from excavation base and sidewalls (if accessible) or stockpiles for PID screening and laboratory analysis. Potential impacted water will be collected from excavations. Soil and/or regulated material sample analytical parameters will be determined based on field observations, site history, and MPCA guidelines. Laboratory analytical results typically take 10 working days to obtain.

The results of the preliminary screening will be evaluated by the environmental professional/consultant. The contractor will not be allowed to continue work in the area until the type and magnitude of contamination is documented, and an appropriate response action is determined.

6.4 Potential Contaminated/Regulated Materials

6.4.1 Stained Soils or Soils Exhibiting Strong or Unusual Odors

In the event that stained soils or soils exhibiting strong or unusual odors are encountered, they will be segregated, stockpiled, and properly characterized for disposal. Water, including rainwater, shall be considered contaminated if it is in contact with contaminated soil. Excavations in contaminated areas will be bermed, if necessary, to prevent rainwater from entering the excavation so that rainwater management requirements are minimized.

6.4.2 Field Screening of Stained Soils or Soils Exhibiting Strong or Unusual Odors

Soils will be observed for the presence of visual and olfactory indications of contamination. Headspace monitoring will be completed in accordance with MPCA methodology using a PID equipped with a 10.6 or 11.7-electron-volt lamp to monitor soil for the presence of organic vapors. The frequency of samples collected for headspace analysis will be based on the type of soil being excavated. The environmental professional/consultant will determine the frequency of PID headspace sampling throughout the Project area based on the homogeneity of the material being excavated, the volume, and type of debris encountered. A minimum of one sample for headspace analysis will be collected for approximately every 10 cubic yards of soil removed. The environmental professional/consultant will have asbestos inspection credentials and will monitor for potential ACM/ACWM. All screening results will be documented.

6.4.3 Asbestos

Asbestos may be encountered in three different forms:

Isolated ACM - The ACM occurs as isolated fragments that can be segregated by hand and containerized (such as a fragment of roofing paper),

ACWM - The ACM occurs in larger quantities that cannot be segregated by hand (such as numerous fragments of transite buried with other demolition material), and

Inactive Intact ACM - The ACM is still intact as part of an inactive utility (such as asbestos-wrapped steam pipe, an asbestos water pipe or asbestos conduit).

All ACM/ACWM will be abated by a licensed asbestos contractor who will complete all required notifications and obtain all required approvals from the MPCA and/or MDH prior to completing ACM/ACWM abatement. The asbestos abatement contractor will manage removal (excavation/disposal/abatement) of all ACM and ACWM such that all removal activities will result in no visible dust emissions. Excavation, containerization, loading and hauling of ACM/ACWM will be completed in accordance with all applicable laws, rules, and regulations. Prior to abatement, an Emission Control Plan will be prepared.

6.4.4 Underground Storage Tanks

In the event an unknown UST is encountered, the following actions will be taken:

An MPCA-certified UST supervisor that is also a certified contractor or in the employ of a certified contractor will oversee the removal of the tank.

The MPCA tank 10-day tank notification and removal forms will be submitted as required.

The tank removal will be completed in accordance with all safety and environmental protection precautions as required by law including, but not limited to: drain all connecting pipes, remove fuel and fuel/water mixture from the tank to the extent practicable, purge all explosive vapors from the tank, inspect the removed tank for evidence of leaks, and document the condition of the tank.

Soil samples in the tank excavation cavity will be screened with a PID, and soil samples (and water samples if encountered) collected for laboratory analysis in accordance with the MPCA requirements.

Metal tanks dismantled and cleaned on-site will be disposed by recycling them as metal scrap; fiberglass tanks will be disposed in a Minnesota-landfill.

Removed petroleum product will be recycled at a permitted facility and removed tank bottom/sludge will be managed as a hazardous waste for disposal/recycling at a permitted fuel recycling facility.

6.4.5 Free Product

In the event that free product is encountered, work will stop in the area until appropriate collection measures can be brought to the site and the State Duty Officer notified. The environmental professional/consultant, in consultation with the MCPA as necessary, will determine appropriate handing, testing, and disposal requirements.

6.4.6 Buried Containers

In the event that drums, or other storage containers are unearthed during excavation activities, they will be removed, and their condition evaluated by appropriately trained personnel. If the containers are established to be in poor condition, the contents will be transferred to Department of Transportation (DOT) approved overpack drums. The drums will be placed in a secure location. The contents of the containers will be sampled and characterized for disposal in accordance with appropriate state and federal requirements.

Soil from the area around the container will be screened for indications of contamination and potentially impacted soil will be properly managed.

6.4.7 Creosote Timbers/Railroad Ties

In the event that materials such as treated wood are encountered, the treated wood will be segregated and properly disposed.

6.4.8 Waste Tires

In the event that waste tires are encountered, the tires will be segregated. When a sufficient number of tires are accumulated, they will be collected by an approved vendor and hauled off-site for recycling. Documentation regarding the recycling will be obtained by the contractor and provided to the environmental professional/consultant.

6.4.9 Batteries

In the event that batteries are encountered, the batteries will be segregated and placed in a labeled corrosion-resistant box. Any recovered batteries will be collected by an approved vendor and hauled off-site for recycling. Documentation regarding the recycling will be obtained by the contractor and provided to the environmental professional/consultant.

6.4.10 Oil Filters

In the event that oil filters are encountered, the oil filters will be segregated and placed into a labeled steel drum. When a sufficient number of filters are accumulated, they will be collected by an approved vendor and hauled off-site for recycling. Documentation regarding the recycling will be obtained by the contractor and provided to the environmental professional/consultant.

6.4.11 Dewatering

If dewatering of potentially contaminated water needs to occur, the environmental professional/consultant will observe and document the dewatering activities in the contaminated area. Contractor will be prepared to containerize the water if required.

The environmental professional/consultant will collect all water samples necessary to apply for the appropriate permit(s) to coordinate with the City of Duluth and Western Lake Superior Sanitary District to identify an appropriate discharge location. The contractor will be responsible for obtaining all necessary permits and completing all required documentation reports for discharge of contaminated water.

If analytical samples indicate that pre-treatment is necessary due to contamination concentrations prior to discharge of water, then the contractor shall supply a portable water treatment system. The system will need to be designed by a registered Professional Engineer licensed in the State of Minnesota and include components that will treat and discharge water that meets permit requirements. Components may include, but not be limited to: flow equalizer, suspended solids removal, oil/water separator, and activated carbon filtration. The portable water treatment system shall have a treatment capacity equal to or greater than the rate of temporary construction dewatering.

Uncontaminated water will be managed in accordance with the project's SWPPP.

6.4.12 Spills

If a spill occurs, the spill and impacted materials will be cleaned up immediately if safe to do so. If the spill is not safe to clean up or too large for the contractor to handle, an emergency spill responder will be contacted immediately, and the spill addressed upon their arrival. State Duty Officer reporting will be completed as required by Minnesota Statute §115.061.

State Duty Officer phone number: 1.800.422.0798 or 651.649.5451

Impacted materials will be stockpiled and/or containerized, labeled, and sampled as required by the landfill for disposal.

6.5 Disposal

In the event that contaminated and/or regulated materials need to be disposed, the contractor will propose the Minnesota permitted landfill that is permitted to accept the materials that need to be properly disposed. The contractor will provide a waste profile from the landfill and the environmental professional/consultant will review it prior to it being submitted to the landfill. No material can be hauled to the landfill without an approval (email is acceptable) from the landfill.

The generator for the contaminated and/or regulated materials encountered during excavation will be the DAA. The DAA's authorized representative or designee will sign as the Generator. Copies of the final signed manifests and weigh tickets will be provided to the Project Engineer daily, or as approved by the Project Engineer.

6.6 Reporting

Any incidents managed in accordance with the CCP will be documented as part of the RAP Implementation Report.

7 RAP Implementation Reporting

Upon completion of the response actions for the demolition project, a RAP Implementation Report will be completed documenting the following:

- Documentation of field activities;
- Site plan showing pertinent site features;
- Illustration showing sample locations, if applicable;
- Analytical laboratory results;
- Data evaluation and presentation of findings; and,
- Recommendations concerning further action, if necessary.

8 Schedule

The project is scheduled to begin in Summer 2027.

Sample Depth (ft) → Groundwater Observation Summary

PFOS - 0.01 ← Analytical Results (ng/L)

Soil Observation Summary

Maximum PID Measurement → 0.5 ppm Fill to EOB ← Soil Description

- **Unregulated Soil** meets the MPCA definition of unregulated fill (also includes non-impacted, naturally occurring native soil
- **Regulated Soil** will be managed as restricted reuse on-site. Regulated Soil contains low level contamination [exceeding MPCA Residential/Recreational Soil Reference Value (RSRV) and Soil Leaching Value (SLV) but less than all Commercial/Industrial SRVs (ISRV)]. Regulated soil can also contain debris.
- **Industrial Exceedance Soil** will be managed as contaminated material and will be disposed of at a Minnesota-permitted solid waste facility. Industrial exceedance soil contains contamination exceeding Commercial/Industrial SRVs.
- Soil parameter concentrations shown exceed MPCA SLVs, RSRVs, and ISRVs.
- **Bold** soil detections indicate and exceedance of the ISRV.
- Water parameter concentrations shown exceed Minnesota Department of Health (MDH) Health Based Guidance (HBGs), Environmental Protection Agency (EPA) Maximum Contaminant Levels (MCLs), and National Pollutant Discharge Elimination System (NPDES) General Permit Limits (GPLs).
- Depth = Sample depth in feet below ground surface (bgs).
- EOB = End of Boring (Termination Depth of Hand Auger Boring).
- Per- and polyflouroalkyl substances (PFAS)
- ppm = parts per million
- Soil detections shown are in nanograms per gram (ng/g).
- Water detections shown are in nanograms per liter (ng/L).
- Air National Guard (ANG)
- Photoionization Detector (PID)
- See 2026 Phase II Environmental Investigation (SEH, 2026) for individual PFAS compound abbreviations.

HA-02 (0 to 3 feet bgs)
During the 2026 Phase II Environmental Investigation HA-02 identified soil that exceeded the MPCA RSRVs. The extent of impacts will be delinated by additional sampling during project construction.

HA-02
EOB=5 (1s and 3s)
Soil Analytical Results
(1) PFOA - 0.366
Groundwater Analytical Results
Groundwater not encountered.
Soil Observation Summary
0.1 ppm
Clayey sand fill to EOB.

HA-03
EOB=5 (1s and 3s)
Soil Analytical Results
All below MPCA SLVs, SRVs, and UFC.
Groundwater Analytical Results
Groundwater not encountered.
Soil Observation Summary
0.2 ppm
Clayey sand fill to EOB. Trace wood chips at 3.5 feet bgs.

HA-04
EOB=5 (1s and 3s)
Soil Analytical Results
All below MPCA SLVs, SRVs, and UFC.
Groundwater Analytical Results
Groundwater not encountered.
Soil Observation Summary
0.1 ppm
Clayey sand fill to EOB.

HA-05
EOB=5 (1s and 3s)
Soil Analytical Results
All below MPCA SLVs, SRVs, and UFC.
Groundwater Analytical Results
Groundwater not encountered.
Soil Observation Summary
0.2 ppm
Clayey sand fill to EOB.

HA-07
EOB=3 (1s and 2.5s)
Soil Analytical Results
(1) PFOS - 27.4
(1) PFOA - 0.372
(3) PFOA - 1.24
Groundwater Analytical Results
Groundwater not encountered.
Soil Observation Summary
0.1 ppm
Clayey sand fill to EOB.

HA-09
EOB=5 (1s and 3s)
Soil Analytical Results
(1) PFOS - 16.0
(3) PFOA - 0.892
Groundwater Analytical Results
Groundwater not encountered.
Soil Observation Summary
0.1 ppm
Silty sand fill to EOB.

HA-07 and HA-09 (0 to 5 feet bgs)
During the 2026 Phase II Environmental Investigation HA-07 and HA-09 identified soil that exceeded the MPCA RSRVs.The extent of impacts will be delinated by additional sampling during project construction.

HA-01 (0-5 feet bgs)
During the 2026 Phase II Environmental Investigation HA-01 identified soil that exceeded the MPCA ISRVs. The extent of impacts will be delinated by additional sampling during project construction.

HA-01
EOB=5 (1s and 3s)
Soil Analytical Results
(1) PFDA - 9.24
(1) PFOS - 176
(1) PFOA - 0.669
(3) PFDA - 4.98
(3) PFOS - 180
(3) PFOA - 4.34
Groundwater Analytical Results
Groundwater not encountered.
Soil Observation Summary
0.1 ppm
Clayey sand fill to EOB. Buried topsoil at 4.5 to 5 feet bgs.

BGSL-11 (0 to 0.5 feet bgs)
The MN ANG completed BGSL-11 in May 2024 and identified soil that exceeded the MPCA RSRVs. The extent of impacts will be delinated by additional sampling during project construction.

HA-06
EOB=5 (1s and 3s)
Soil Analytical Results
All below MPCA SLVs, SRVs, and UFC.
Groundwater Analytical Results
Groundwater not encountered.
Soil Observation Summary
0.2 ppm
Clayey sand fill to EOB.

HA-08
EOB=5 (1s and 3s)
Soil Analytical Results
All below MPCA SLVs, SRVs, and UFC.
Groundwater Analytical Results
Groundwater not encountered.
Soil Observation Summary
0.5 ppm
Clayey sand and silty sand fill to EOB.

Executive Summary

Phase II Environmental Investigation

Short Elliott Hendrickson Inc. (SEH®) was retained by the Duluth Airport Authority (DAA) to conduct a Phase II Environmental Investigation for the Midfield Ramp Repair - Phase 4 project located at the Duluth International Airport (DLH) in Duluth, St. Louis County, Minnesota (herein referred to as the project "Site"). The Site location is depicted on **Figure 1**.

The Midfield Ramp is located adjacent to the south of Taxiway A (the parallel taxiway for the main runway (Runway 9/27) serving the DLH). The Midfield Ramp is an approximately 324,900 square foot ramp and serves as parking for large transient aircraft. The Phase 4 project area is approximately 31,700 square feet in size and is located in the southeastern portion of the overall Midfield Ramp. The proposed Midfield Ramp Repair project area is shown on **Figure 2**.

The overall project consists of reconstructing the concrete pavement and replacement of stormwater piping and drain tile. The typical section currently consists of approximately 10 to 11.5 inches of concrete pavement overlying approximately 6 to 12 inches of aggregate base material. The proposed section will include 12 inches of concrete pavement overlying 11 inches of a crushed aggregate base course overlying 12 inches of a granular subbase course with a geotextile fabric. The existing stormwater piping to be replaced is located between 6 and 9 feet below ground surface (bgs).

This investigation was performed to investigate the project Site for the presence of contaminated soil and groundwater that may be encountered during project construction-related activities. Drilling and sampling was completed on April 20, 2026.

The Phase II Environmental Investigation included four hand auger borings (HA-01 through HA-04) completed to a depth of 5 feet bgs. The borings were completed under the existing Midfield Ramp concrete paving in areas of proposed pavement repair and subbase corrections, as well as stormwater drainage improvements. Fill material was encountered extending to the termination depth of the hand auger borings (5 feet bgs). No debris was observed in fill soil. Native deposits underlying the fill were not encountered and photoionization detector (PID) headspace readings were recorded between 0.0 to 1.1 parts per million (ppm), within background levels. No visual or olfactory indications of contamination were noted during the investigation.

No contaminants were detected in soil samples at concentrations exceeding the MPCA Unregulated Fill Criteria (UFC) indicating excess soil, if generated by the project, could be re-used on or offsite.

A groundwater sample was collected from the nearby MW-12 on April 30, 2026. Depth to groundwater was measured to be 5.95 feet bgs at the time of the sample and the monitoring well was sealed. Various per- and polyfluoroalkyl substances (PFAS) compounds were detected above their respective laboratory reporting limits but below their respective Environmental Protection Agency (EPA) Maximum Contaminant Levels (MCLs) and Minnesota Department of Health (MDH) Health Based Guidance (HBGs). However, National Pollutant Discharge Elimination System (NPDES) General Permit Limits (GPLs) prohibit the discharge of pollutants associated with emerging contaminants such as PFAS.

Based on the current design for the Midfield Ramp Repair – Phase 4 project, SEH understands approximately 3 feet of soil below the proposed pavements will be corrected. Considering that no contaminants were detected in soil at concentrations exceeding the MPCA UFC, excess soil if

generated by the project, could be re-used on or offsite. The proposed storm sewer construction is anticipated to be between 6 and 9 feet bgs across the site. Given that the identified groundwater impacts exceed the current NPDES GPLs, if groundwater will be discharged as part of the project, SEH recommends that it be handled in accordance with all regulations prior to its discharge.

Unknown contamination, if encountered during the project, should be handled in accordance with all applicable local, state, and federal regulations. If encountered, work in the area should be temporarily halted and reported to the project engineer.

Phase II Environmental Investigation

Midfield Ramp Repair - Phase 4

Prepared for the Duluth Airport Authority

1 Introduction

Short Elliott Hendrickson Inc. (SEH®) was retained by the Duluth Airport Authority (DAA) to conduct a Phase II Environmental Investigation for the proposed improvements for the Midfield Ramp Repair - Phase 4 project located at the Duluth International Airport (DLH) in Duluth, St. Louis County, Minnesota (herein referred to as the "Site"). The Site location is depicted on **Figure 1**. The Site is described in further detail in **Section 1.1**.

1.1 Site Description

The Midfield Ramp is located adjacent to the south of Taxiway A (the parallel taxiway for the main runway (Runway 9/27) serving the DLH). The Midfield Ramp is an approximately 324,900 square foot ramp and serves as parking for large transient aircraft. The Phase 4 project area is approximately 31,700 square feet in size and is located in the southeastern portion of the overall Midfield Ramp. The proposed Midfield Ramp Repair project area is shown on **Figure 2** and **Figure 3**.

The overall project consists of reconstructing the concrete pavement and replacement of stormwater piping and drain tile. The typical section currently consists of approximately 10 to 11.5 inches of concrete pavement overlying approximately 6 to 12 inches of aggregate base material. The proposed section will include 12 inches of concrete pavement overlying 11 inches of a crushed aggregate base course overlying 12 inches of a granular subbase course with a geotextile fabric. The existing stormwater piping to be replaced is located between 6 and 9 feet below ground surface (bgs).

1.2 Purpose of Investigation

This investigation was performed for the following purpose:

- To investigate the project area for the presence of contaminated soil and groundwater that may be encountered during project construction-related activities.

1.3 Scope of Work and Limitations

The investigation Work Plan was developed using information gathered from previously completed environmental investigations within the area of the Midfield Ramp (See **Section 2.2**). The work plan documents are included as **Appendix A**. The proposed work was based on the design information available at the time. Therefore, the Phase II Environmental Investigation addressed general assumptions regarding anticipated construction considerations available at the time of the work plan development. Hand auger borings were completed adjacent to proposed construction areas identified from the design.

Modifications to the work plans were made based on field observations, accessibility, and other considerations. Photoionization detector (PID) soil headspace readings are summarized on **Table 1.** Detected soil and water sample analytical results are summarized on **Table 2** and **Table 3**, respectively.

SEH advanced a total of four hand auger borings (HA-01 through HA-04) for the project on April 20, 2026. One groundwater sample (MW-12-5.95) was also collected from an existing monitoring well (MW-12) prior to the sealing of the well on April 30, 2026. The investigation included field screening, geological logging, PID soil and groundwater headspace screening, and soil and water collection and analysis. Results of the Phase II Environmental Investigation are summarized on attached tables and figures and discussed in **Section 4** of this report.

1.4 User Reliance

This Phase II Environmental Investigation report and all reports, verbal and written, are solely for the use of DAA. Any third party may have different interests, purposes, and motives than DAA with regard to this assessment and report. Any reliance on the Phase II Environmental Investigation report by any other party shall be at such party's sole risk, unless that party has written authorization from SEH and DAA, and is a party to the Agreement between SEH and DAA.

2 Site and Surrounding Area Background

2.1 Site Location

Figure 1 illustrates the location of the Site. The Site is located at the DLH in Duluth, St. Louis County, Minnesota. The Site occupies portions of the following parcel identification numbers (PINs):

- 010-2747-00260
- 010-0148-00280

2.2 Findings of the Midfield Ramp Repair - Phase I Environmental Site Assessment

SEH completed a Phase I Environmental Site Assessment (ESA) of the Taxiway A - Phase 5 and Midfield Ramp – Phase 3 project areas (herein referred to as the "2025 project areas") in April 2025 (SEH, 2025). The 2025 project areas are located adjacent to the northwest of the Midfield Ramp Repair – Phase 4 project area. The Phase I ESA indicated that prior to development of the DLH, the project areas were undeveloped and generally occupied by agricultural land. Several small structures of unknown use, likely agricultural/farmsteads, were present within the 2025 project area and surrounding area from at least the late 1930s through the 1940s. By the late 1940s, construction of the existing airport infrastructure (Taxiway A, Runway 9/27, and the Midfield Ramp) were visible in aerial photographs. By the early 1980s, the existing airport taxiway and runway alignment were developed, and minimal changes occurred through the present day.

The 2025 Phase I ESA identified the 2025 project areas in numerous regulatory databases related to historic and current uses including Leak sites, spills, Resource Conservation and Recovery Act (RCRA) hazardous waste generators, construction stormwater permits, air emissions permits, and per and poly-fluoroalkyl substances (PFAS) industry classifications.

Although the database report identified these listings for the 2025 project areas, a majority of the listings were located at the main DLH terminal facility located over 3,500 feet southeast of the Subject Property.

The 2025 Phase I ESA identified a total of eight unplottable spills for the DLH property. Although the exact location of the spills were unknown, the releases ranged in size between 20 and 200 gallons. While it is not likely that all of the unplottable releases affected the 2025 project areas, given the use of the 2025 project areas and surrounding area, it is likely that some spills related to fueling activities have occurred on or adjacent to the 2025 project areas.

The DLH was also identified in several area wide listings through the Formerly Used Defense Sites (FUDs) Program (Property Number E05MN0033) and the Minnesota Pollution Control Agency (MPCA) Superfund Program (Site ID SR0000095). Both the MPCA Superfund listing and the FUDs Program listing encompass a number of sites located throughout the DLH. A Site Research Report (EMR, Inc. [EMR], 2004) completed under the FUDs program for the United States Army Corps of Engineers (USACE) identified the following Areas of Concern (AOCs) located either on and/or adjacent to the 2025 project areas (**Figure 2**):

- Former Underground Storage Tank (UST) Basin AOC - located adjacent to the southwest of the 2025 project areas and formerly contained two 50,000-gallon aviation fuel USTs, a pump house identified as former Building 112, underground fuel transfer pipes, and former Building 113, which stored solvents and housed an oil/water separator.
- Aircraft Washrack AOC - located adjacent to the southwest of the 2025 project areas and contained underground solvent piping from Building 113 and a former aircraft washrack where solvents were used.
- Fuel Transfer AOC - Encompasses a majority of the western half of the 2025 project areas. The Fuel Transfer AOC included two fueling vaults, six fueling dispensers, and associated underground piping and valves. The Fuel Transfer AOC intersects the western half of the project Site.

One Installation Restoration Program (IRP) site was identified under the MPCA Superfund listing adjacent to the southwest of the Subject Property. This IRP site is associated with the Former UST Basin AOC. Remedial activities in association with the AOCs have taken place and include removal of the two 50,000-gallon USTs and 40 linear feet of fuel piping associated with the Former UST Basin in 1993, and removal of the fuel vaults associated with the fuel Transfer AOC between 1998 and 2002. A reported 1,900 feet of fuel piping was reported to remain in place after the 2002 removals.

Investigations completed in 2007 (EMR, 2007), identified petroleum impacted soils and groundwater in association with the Former UST Basin/Aircraft Washrack AOCs and Fuel Transfer AOC. The depth to groundwater ranged from 8 to 10 feet bgs and flow was generally northwesterly. Additionally, stormwater and shallow groundwater at the Former Fuel Transfer Area and Former UST/Aircraft Washrack AOCs are managed by a series of sub-grade open joint subdrains that tie into the storm sewer network that discharges to the Beaver River.

SEH completed a Phase I Environmental Technical Memo on behalf of the DAA (SEH, May 2022) for the proposed Midfield Ramp Repair project, which encompasses a portion of the Subject Property (Midfield Ramp Repair – Phase 4 project area). The memo included a review of the previous FUDS program work and review of a Geotechnical Evaluation and Limited Environmental Evaluation of the Midfield Ramp (Braun Intertec Corporation [Braun], 2021).

The Braun evaluation was completed in July 2021 and included twelve soil borings advanced to a depth of 10 feet bgs. Soil samples were screened in the field and select samples were analyzed for volatile organic compounds (VOCs), gasoline range organics (GRO), diesel range organics (DRO), polycyclic aromatic hydrocarbons (PAHs), and lead. Elevated PID readings (greater than 5,000 parts per million [ppm]) were identified during the investigation; the highest PID readings were encountered in soil borings B-7 and B-10 advanced near former dispensers, located in the northern portion of the Midfield Ramp. Groundwater was not encountered during the limited investigation. Soil analytical results identified detections of DRO, GRO, and various petroleum-related VOCs exceeding their respective Unregulated Fill Criteria (UFC) and Soil Leaching Values (SLVs) in boring B-10 at a depth of 8 to 10 feet bgs. Petroleum impacted soil as identified during the Geotechnical Evaluation and Limited Environmental Evaluation of the Midfield Ramp is associated with the impacts identified in connection with the Fuel Transfer AOC.

A DLH FUDS Program Management Action Plan prepared by USACE states that the program does not plan to complete any additional Remedial Investigations (RIs) until 2024, and additional remedial actions are not planned until after 2025 (USACE, 2019).

Previous sampling locations and summary of groundwater results are depicted on **Figure 2**.

2.3 Regional Physical Setting

The Site topography is generally flat with an approximate elevation of 1420 feet above mean sea level (amsl) (MnTOPO, 2026).

2.3.1 Regional Geology

Based on previously completed investigations in the area of the Site (**Section 2.2**), native glacial till deposits consisting of silty sand and clayey sand were observed extending to the termination depth of the borings (10 feet bgs) (Braun, 2021). Published geology indicates native deposits in this area are glacial lake deposits of the Cromwell Formation of the Wrenshall Member of the Michigan Sub-episode and consist of brown silt and clay with minor sand (Minnesota Geological Survey [MGS], 2009).

The uppermost bedrock unit is the Gabbroic zone of the Duluth Complex at approximately 1320 to 1370 feet above amsl or around 50 to 100 feet bgs. The Gabbroic zone of the Duluth Complex is described as medium-grained, intergranular, foliated and locally layered olivine oxide gabbro. The Gabbroic zone of the Duluth Complex ranges from 2,300 to 5,000 feet thick (MGS, 2008).

2.3.2 Regional Hydrogeology

Based on previously completed investigations in the area of the project Site (see **Section 2.2**), depth to groundwater ranged from 6 to 10 feet bgs and groundwater flow was generally to the northwest (EMR, 2007).

3 Overview of the Phase II Investigation

The following sections describe the scope and goals of the Phase II Environmental Investigation. Also included is methodology, quality assurance/quality control (QA/QC) information and regulatory/guidance levels. The Phase II Environmental Investigation areas are depicted on **Figure 2** and **Figure 3**. Results of the Phase II Environmental Investigation are discussed in **Section 4**. Completed borings, field screening results, and soil sample locations and results are captured on attached figures and tables.

3.1 Field Investigation and Sampling Methods

Hand auger borings were completed by SEH using both powered and non-powered hand augers following the removal of the existing concrete pavement via a coring machine. Lubricants or solvents with petroleum products or hazardous substances were not used for downhole drilling or on sampling equipment. Each hand auger boring was properly abandoned in accordance with regulations. The location of each hand auger boring is depicted on **Figure 3**.

The investigation included the collection of a groundwater sample from an existing monitoring well (MW-12) located northwest of the project Site.

3.1.1 Soil Field Screening

Soil samples were collected for field screening from each boring by placing soil into a new, clean, quart-size, labeled, resealable bag. The bags used for field screening were used for one sample only. Soil clumps were manually agitated and the bags were shaken vigorously at the beginning and end of the headspace development period. The bags were placed in a sunny location. Weather conditions at the time of the investigation included moderate temperatures with occasional high wind speeds.

PID headspace readings were collected in general accordance with MPCA guidelines. A MiniRae PID with a 10.6 electron volt (eV) bulb calibrated to isobutylene was inserted through a small opening in the bag and the highest reading was recorded. Empty bag readings were recorded periodically throughout the investigation and are considered “background.” Empty bags had readings ranging from 0.0 to 0.3 ppm. The results of the headspace readings are summarized on **Table 1**.

3.1.2 Soil Sampling

Soil samples were collected using the hand auger for field screening and placed into the appropriate jars for laboratory analysis.

The SEH scientist wore a new clean pair of disposable Nitrile® gloves while collecting each sample. All remaining soil from each sample and borehole cuttings were thin spread on-site. Sample containers were placed in coolers with ice and were protected from sunlight. Samples were transported to Eurofins within 48 hours of their collection with proper chain-of-custody documentation. Specific information on samples collected (e.g. total number of samples collected, sample depths, etc.) is included within **Section 4**.

Analytical samples collected were labeled corresponding to the boring number from which they were collected (for example HA-01). Additionally, soil samples were labeled for the depth from which they were collected. For example, a sample collected from a three foot depth in HA-01 is

labeled HA-01-3. Samples were collected from the interval ± 0.5 foot on either side of the noted sample depth. For example: a sample with a noted depth of 3 feet bgs contains material from 2.5 to 3.5 feet bgs.

3.1.3 Groundwater Sampling

The groundwater sample was collected through using a high density polyethylene (HDPE) tubing and a peristaltic pump. The SEH scientist wore a new clean pair of disposable Nitrile® gloves while collecting each water sample. The groundwater sample was placed in the appropriate laboratory containers in accordance with the laboratory's specifications. The sample containers were placed in a cooler with ice and protected from sunlight. The samples were then transported to Eurofins within 48 hours of their collection with proper chain-of-custody documentation.

A total of three well volumes was purged from the well and containerized prior to the sample collection.

Specific information on the sample collected (e.g. samples depth, etc.) is included within **Section 4**.

Groundwater sampling was completed in an existing well (MW-12) located to the northwest of the Phase 4 work area. The purpose of groundwater sampling was to investigate groundwater most likely to be encountered during construction and dewatering activities.

3.1.4 Chemical Analytical Methodologies

Soil sample analytes included:

- DRO (Wisconsin Method DRO)
- GRO (Wisconsin Method GRO)
- VOCs (Environmental Protection Agency [EPA] Method 8260D)
- PAHs (EPA Method 8270E by selective ion monitoring (SIM))
- RCRA 8 Metals (EPA Method 7471B/6020B)
- Moisture (SW3550C)
- PFAS (EPA 1633, Revision A, by liquid chromatography/mass spectrometry [LC-MS/MS])

Water sample analytes included:

- DRO (Wisconsin Method DRO)
- GRO (Wisconsin Method GRO)
- VOCs (EPA Method 8260D)
- PAHs (EPA Method 8270E by SIM)
- RCRA 8 Metals (EPA Method 7471B/6020B)
- PFAS (EPA 1633, Revision A, by LC-MS/MS)

3.2 Notes on Analytical Methods

The following descriptions provide background information and terminology for DRO, Silica Gel Clean-Up, GRO, and PFAS.

3.2.1 DRO

The Wisconsin DRO Method is designed to measure mid-range petroleum products such as diesel or fuel oil. This method provides gas chromatographic conditions for the detection of semi-volatile petroleum fractions such as diesel, fuel oil #2, or kerosene. DRO analysis includes hydrocarbons within the range of C10 - C28 and a boiling point range between approximately 170 degrees Celsius (º C) and 430°C. Quantitation is based on a direct comparison of the total area within this range to the total area of the Diesel Component Standard. As defined in the method, other organic compounds, including chlorinated hydrocarbons, phenols, phthalate esters, PAHs, kerosene, fuel oils and heavier oils are measurable within the range of C10 - C28. DRO results include these compounds/products. Components greater than C28 present in products such as motor oils or lubricating oils are detectable under the conditions of the method (Wisconsin Department of Natural Resources [DNR]a, 1995).

3.2.2 GRO

The Wisconsin GRO Method is designed to measure the concentration of GRO in water and soil. GRO analysis includes hydrocarbon within the range of C6 - C10 and a boiling point range between approximately 60°C and 220°C. All the chromatographic response falling between the onset of the methyl-tertiary-butyl ether peak and the conclusion of the naphthalene peak. Quantitation is based on a direct comparison of the total area within this range to the total area of the Gasoline Component Standard.

As defined in the method, other organic compounds including chlorinated solvents, ketones, ethers, mineral spirits, stoddard solvents, and napthas are measurable within the range of C6 - C10. High levels of heavier petroleum products such as diesel fuel may contain some volatile components producing a response within the retention time range for GRO. As defined in the method, results for GRO include petroleum fractions such as gasoline, stoddard solvent, or mineral spirits as well as other measurable organic compounds such as chlorinated solvents, ketones, and ethers (Wisconsin DNRb, 1995).

3.2.3 PFAS EPA Method 1633

The EPA has developed the 1633 method to test for 40 PFAS compounds in wastewater, surface water, groundwater, soil, biosolids, sediment, landfill leachate, and fish tissue. Method 1633 can be used in several applications including National Pollution Discharge Elimination System (NPDES) discharge permits and is approved method within MPCA Guidance Document p-eao2-28 (MPCA, 2022). This method is a performance-based approach to accommodate the unique challenges PFAS compounds possess. Samples are extracted using a methanol solution, cleaned with carbon and other filters, and then analyzed with a liquid chromatography–tandem mass spectrometry instrument. This filtering and cleaning removes materials that may interfere with accurate results. Care needs to be taken with sample collection, preparation, and analysis to prevent cross contamination. The method specifies that strict quality control and detailed record-keeping measures be taken in order to ensure reliable and repeatable results. (EPA, December 2024; MPCA, January 2022).

3.3 Quality Assurance/Quality Control

Eurofins is a Minnesota-certified laboratory and have a current QA/QC manual on file with the Minnesota Department of Health (MDH) and the MPCA. A QA/QC report “Project Narrative” is

attached near the beginning of each Eurofins laboratory report (**Appendix A**). The QA/QC report includes:

- General information
- Hold time
- Sample preparation
- Initial calibrations
- Continuing calibrations
- Surrogates
- Method blanks
- Laboratory control spikes
- Matrix spikes
- Duplicate samples
- Additional comments

Based on review of the laboratory results and QA/QC data, the quality of the data is acceptable for the purposes of this report.

3.4 Regulatory and Guidance Levels

To evaluate the magnitude of impacts, MPCA regulatory levels and guidelines, where established, are compared to analytical results for detected chemicals.

3.4.1 Soil

Soil results are compared to MPCA Residential/Recreational Soil Reference Values (RSRVs), Commercial/Industrial SRVs (ISRVs), SLVs, and UFC.

3.4.1.1 Soil Reference Values

Revised SRVs were published by the MPCA in May 2026 (MPCA, 2026), and are incorporated into this report. The MPCA intends to complete annual updates to the SRVs. The MPCA SRVs are intended to be risk-based screening values and were derived using methodology from the EPA's Superfund Program, exposure parameters based on land use categories, contaminants toxicity values, and a contaminant's chemical-specific parameters.

3.4.1.2 Screening Soil Leaching Values

The MPCA has established SLVs that provide a conservative estimate of whether groundwater contaminant concentrations could result from leaching to groundwater from contaminated soils in direct contact with groundwater. The current Screening SLVs were established in 2013 (as discussed in MPCA Guidance Document c-r1-04 [MPCA, May 2013]) and are referenced in the MPCA Guidance Document c-rem1-01, *Best Management Practices for the Off-Site Reuse of Unregulated Fill* (MPCA, 2024).

3.4.1.3 MPCA Unregulated Fill Criteria

The MPCA has defined unregulated fill in guidance document c-rem1-01, *Best Management Practices for the Off-Site Reuse of Unregulated Fill* (MPCA, March 2024). The guidance document states that soil that meets all SLV and SRV limits, is free from solid waste, debris, asbestos containing materials (ACM), visual staining and odors, and has organic vapors less

than 10 parts per million (ppm) (measured using a PID) is considered to meet the definition of unregulated fill. This document also defines limits for DRO and gasoline range organics (GRO) of 100 milligrams per kilogram (mg/kg) in soil are as meeting the definition of unregulated fill. ACM is material containing greater than 1% asbestos, as defined in Minnesota Statutes, Section 326.71, Subdivision 3.

3.4.2 Groundwater

Groundwater results are compared to MDH Health Based Guidance (HBG) that have been established to evaluate drinking water, NPDES General Permit Limits (GPLs) for contaminated groundwater discharges, and EPA maximum contaminant levels (MCLs) for drinking water contaminants.

The MDH HBGs, NPDES GPLs, and EPA MCLs are used as a proxy for evaluating the chemicals detected in water; however, for construction purposes the treatment limits for dewatering discharge would be established in the issued discharge permit for the project. Results for this project are compared to MDH HBGs, NPDES GPLs, and EPA MCLs on **Figure 3** and **Table 3**.

3.4.2.1 Minnesota Department of Health – Health Based Guidance

Groundwater results are compared to MDH HBGs that have been established to evaluate drinking water. These values include Health Risk Limits (HRLs), Health Based Values (HBVs), and Risk Assessment Advice (RAA) levels. The MDH developed guidance (published in November 2018) for petroleum contaminated drinking water wells which supersedes guidance of Total Petroleum Hydrocarbons (TPH) criteria developed in 2000. Petroleum products contain many chemicals and drinking water criteria are available for only a small fraction of them. This guidance provides a margin of safety in situations where drinking water is contaminated with petroleum residuals that do not exceed individual chemical criteria. The MDH recommends a RAA of 50 microgram per liter (ug/L) TPH which is based on a pyrene surrogate. The MDH guidance indicates that the DRO and GRO values should be added, and other volatile petroleum concentrations should be subtracted from the cumulative total. For the purpose of this Phase II Environmental Investigation, these values (except for RAAs) are used as a proxy for evaluating the chemicals detected in groundwater. A simplified approach of using 50 ug/L as the MDH HBG for DRO and GRO without the calculation and subtraction is being utilized. It should also be noted that reporting limits for this project are greater than 50 ug/L for DRO and GRO (MDH, 2018).

3.4.2.2 NPDES - General Permit Limits

The NPDES general permit (MNG790000) identifies discharge limits for contaminated groundwater discharges. The general permit (MNG790000) was reissued on May 1, 2022, and expires April 30, 2027 (MPCA, May 2022). The general permit regulates the discharge of groundwater extracted at cleanup and redevelopment sites. This includes discharges which have been contaminated by past or present activities, from both known and unknown sources of contamination. GPLs are used in this report as a comparison for groundwater contaminant concentrations. The permit limits used in this report are compared to three different types of groundwater discharge; 1) land application, 2) surface waters not designated as drinking water, and 3) trout streams/surface waters designated as drinking water.

3.4.2.3 Environmental Protection Agency – Maximum Contaminant Levels

The EPA has established National Primary Drinking Water Regulations (NPDWRs) that set mandatory water quality standards for drinking water contaminants that apply to public water systems. Standards called MCLs are established to protect the public against consumption of drinking water contaminants that present a risk to human health. MCLs are not enforceable standards that apply to construction related handling of groundwater (EPA, December 2025).

3.4.3 Regulatory Levels vs. Laboratory Reporting Limits

The following sections describe situations when the achievable laboratory reporting limits are above the established regulatory guidance. Tables of analytical results attached to this report include only detected parameters. In some cases, laboratory reporting limits are greater than the regulatory limits. If a parameter is not detected in any sample, the parameter is not included on the attached tables. All analytical results are included in **Appendix B**.

3.4.3.1 Soil Leaching Values

Several concentrations of VOCs in soil have laboratory reporting limits that exceed MPCA SLVs (SLVs are as low 0.000015 mg/kg). In these cases, the SLV is not achievable by the laboratory analytical method. Reporting limits that exceed regulatory limits also commonly occur when the sample is diluted (required by high level of target, non-target analytes or matrix interferences).

3.4.3.2 PAH Detection Limits

The effluent limitations contained in the General Permit for total carcinogenic PAHs, total non-carcinogenic PAHs, and anthracene are below the method detection limit of currently available and approved analytical test methods. The limit at which compliance or noncompliance is determined will be based on the Minimum Level of EPA method 625 or any updates to that method as published in 40 CFR Part 136, Appendix A. Method limit is synonymous with reporting limit. If during the life of the General Permit a more sensitive test method is approved by EPA for wastewater analyses, then the General Permit effluent limitation will become the enforceable limitation rather than the analytical detection limit (EPA, 2016).

4 Phase II Environmental Investigation Results

SEH advanced four hand auger borings (HA-01 through HA-04) and collected 8 soil samples for laboratory analysis. SEH also collected a groundwater sample (MW-12-5.95W) from a nearby existing monitoring well (MW-12) for laboratory analysis. Borings were advanced to a maximum depth of 5.0 feet bgs. **Figure 3** depicts boring and sample locations. The Investigation results are summarized on **Figure 3**. PID soil headspace readings are summarized on **Table 1**. Detected soil sample analytical results are summarized on **Table 2**. Work plan documents, laboratory reports and boring logs are included as **Appendix A**, **Appendix B**, and **Appendix C**, respectively.

4.1 Geologic, Hydrogeologic, and Field Screening Results

Fill material, consisting of well graded sand with silt was observed extending to the termination depth of the hand auger borings (5 feet bgs). No debris was observed in the borings and native deposits were not encountered.

PID headspace readings were recorded between 0.0 to 1.1 ppm, within background levels. No visual or olfactory indications of contamination were noted in observed soils. PID headspace results are summarized on **Table 1**.

Groundwater was not encountered during the advancement of the hand auger borings; however, groundwater from an existing monitoring well (MW-12), located to the northwest of the project Site, was sampled as part of the investigation. Groundwater was observed at 5.95 feet bgs at the time of the sampling. No visual or olfactory indications of contamination in groundwater were observed.

4.2 Results of Subsurface Investigation

Four hand auger borings (HA-01 through HA-04) were completed throughout the project Site. Select soil samples were collected and analyzed for DRO, GRO, VOCs, PAHs, RCRA metals, and PFAS. Soil samples were collected for chemical analyses with sampling intervals targeted to evaluate potential impacts in soil that will likely be excavated during the reconstruction.

A total of eight soil samples were analyzed, and detections of various metals and PAHs were commonly reported above their respective laboratory reporting limits. With exception of the samples collected at hand auger boring HA-02, various PFAS compounds were detected above their respective laboratory reporting limits in each of the samples collected. One detection of DRO (12.4 mg/kg) was also reported above its laboratory detection limit in hand auger boring HA-04 at a depth of 3 feet bgs. All soil sample analytical results were reported below their respective MPCA SLVs, SRVs, and UFC.

One groundwater sample (MW-12-5.95W) was taken from the existing MW-12 located to the northwest of the project Site. Various PFAS compounds (see **Table 3** for a tabulated list of the detections) were detected above their respective laboratory reporting limits but below their respective EPA MCLs and MDH HBGs. According to the NPDES GPLs, discharge of pollutants associated with emerging contaminants such as PFAS, pharmaceuticals, endocrine active substances, etc., are prohibited (Minn. R. 7050.0210, subp. 13 for).

DRO (<99.4 ug/L) and GRO (<100 ug/L) were not detected above their respective laboratory reporting limits, however, the MDH RAA for DRO and GRO is 50 ug/L, below the laboratory reporting limits. The NPDES GPL for DRO and GRO is 200 ug/L.

5 Conclusions and Recommendations

The Phase II Environmental Investigation included four hand auger borings (HA-01 through HA-04) completed to a depth of 5 feet bgs. The borings were completed under the existing Midfield Ramp concrete paving in areas of proposed pavement repair and subbase corrections, as well as stormwater drainage improvements. Fill material was encountered extending to the termination depth of the hand auger borings (5 feet bgs). No debris was observed in fill soil. Native deposits underlying the fill were not encountered and PID headspace readings were recorded between 0.0 to 1.1 ppm, within background levels. No visual or olfactory indications of contamination were noted during the investigation.

No contaminants were detected in soil samples at concentrations exceeding the MPCA UFC indicating excess soil, if generated by the project, could be re-used on or offsite.

A groundwater sample was collected from the nearby MW-12. Depth to groundwater was measured to be 5.95 feet bgs at the time of the sample. Various PFAS compounds were detected above their respective laboratory reporting limits but below their respective EPA MCLs and MDH HBGs. However, NPDES GPLs prohibit the discharge of pollutants associated with emerging contaminants such as PFAS.

Based on the current design for the Midfield Ramp Repair – Phase 4 project, SEH understands approximately 3 feet of soil below the proposed pavements will be corrected. Considering that no contaminants were detected in soil at concentrations exceeding the MPCA UFC, excess soil if generated by the project, could be re-used on or offsite. The proposed storm sewer construction is anticipated to be between 6 and 9 feet bgs across the site. Given that the identified groundwater impacts exceed the current NPDES GPLs, if groundwater will be discharged as part of the project, SEH recommends that it be handled in accordance with all regulations prior to its discharge.

Unknown contamination, if encountered during the project, should be handled in accordance with all applicable local, state, and federal regulations. If encountered, work in the area should be temporarily halted and reported to the project engineer.

Abbreviations and Descriptions

Abbreviations:
BaP - Benzo(a)pyrene equivalent
BRL - No detections above laboratory reporting limits
DRO - Diesel Range Organics
EOB - End of Boring
EPA - Environmental Protection Agency
ft bgs - feet below ground surface
GW - groundwater
GPL - General Permit Limits
GRO - Gasoline Range Organics
HA - hand auger
HBG - Health Based Guidance
LC-MS/MS - liquid chromatography/mass spectrometry
MDH - Minnesota Department of Health
MPCA - Minnesota Pollution Control Agency
MW - Monitoring Well
mg/kg - milligrams per kilogram
ng/g - nanograms per gram
ng/L - nanograms per liter
NPDES - National Pollutant Discharge Elimination System
PAH - Polycyclic Aromatic Hydrocarbon
PFAS - Per- and polyfluoroalkyl substances
PID - Photoionization Detector
ppm - parts per million
RCRA - Resource Conservation and Recovery Act
SIM - Selected Ion Monitoring
SLV - MPCA Screening Soil Leaching Values
SRV - MPCA Soil Reference Values
SVOC - Semi Volatile Organic Compound
UFC - MPCA Unregulated Fill Criteria
ug/L - micrograms per liter
<x - indicates analyte concentration not detected above the laboratory reporting limit

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

Job Narrative
310-330207-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 4/22/2026 1:20 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 4.8°C.

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) associated with batch 310-487062 recovered above the upper control limit for Acetone(24%D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is:(CCV 310-487062/3).

Method 8260D: The continuing calibration verification (CCV) associated with batch 310-487062 recovered above the upper control limit for Chloroethane(44%D), Vinyl chloride(22%D), Dichlorofluoromethane(27%D), and Bromomethane(60%D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is:(CCV 310-487062/4).

Method 8260D: The continuing calibration verification (CCV) associated with batch 310-487065 recovered above the upper control limit for 1,2,3-Trichloropropane(23%D), Dibromomethane(22%D), Acetone(31%D), Tetrahydrofuran(29%D), 1,1,2,2-Tetrachloroethane(23%D), 2-Butanone(22%D), Methyl tert-butyl ether(23%D), and Ethyl ether(29%D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is:(CCV 310-487065/3).

Method 8260D: The continuing calibration verification (CCV) associated with batch 310-487065 recovered above the upper control limit for Chloromethane(29%D), Chloroethane(133%D), Vinyl chloride(45%D), Trichlorofluoromethane(31%D), Dichlorofluoromethane(40%D), and Bromomethane(83%D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is:(CCV 310-487065/4).

Method 8260D: The continuing calibration verification (CCV) associated with batch 310-487186 recovered outside of the control limits for 2,2-Dichloropropane(-23%D). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The associated sample is impacted: (CCV 310-487186/3).

Method 8260D: The continuing calibration verification (CCV) associated with batch 310-487186 recovered above the upper control limit for Chloroethane(53%D) and Bromomethane(52%D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is:(CCV 310-487186/4).

Method 8260D: The continuing calibration verification (CCV) associated with batch 310-487190 recovered above the upper control limit for Acetone(21%D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is:(CCV 310-487190/3).

Method 8260D: The continuing calibration verification (CCV) associated with batch 310-487190 recovered outside of the control limits for 2,2-Dichloropropane(-31%D). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The associated sample is impacted: (CCV 310-487190/3).

Method 8260D: The continuing calibration verification (CCV) associated with batch 310-487190 recovered above the upper control

limit for Chloroethane(102%D), Vinyl chloride(28%D), Chloromethane(23%D), Dichlorofluoromethane(29%D), and Bromomethane(77%D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is:(CCV 310-487190/4).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Gasoline Range Organics
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
Method WI-DRO: Significant peaks, readily distinguished from background, were detected in the following sample within five minutes after the end of the analytical window defined by the last component eluting in the Diesel Range Organics (DRO) mix (i.e., n-Octacosane): HA-04-3 (310-330207-6).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

PFAS
Method 1633A: The continuing calibration verification (CCV) recovered outside of control limits for IDA compound(s) (flagged). Section 14.3.3 of the finalized EPA 1633 states that the recovery of target analytes for the CCV(s) must be within 70 - 130%, unless the analyte is not of concern for a given project. Since target analyte(s) associated with this IDA are within spec, data is reported. The following samples are impacted: HA-02-3 (310-330207-2) and HA-03-1 (310-330207-3).

Method 1633A: The continuing calibration verification (CCV) recovered outside of control limits for IDA compound(s) (flagged). Section 14.3.3 of the finalized EPA 1633 states that the recovery of target analytes for the CCV must be within 70 - 130%, unless the analyte is not of concern for a given project. Since target analyte(s) associated with this IDA are within spec, data is reported. The following sample is impacted: HA-02-1 (310-330207-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Qualifiers

LCMS

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Surrogate Legend

FBP = 2-Fluorobiphenyl (Surr)
NBZ = Nitrobenzene-d5 (Surr)
TPHL = Terphenyl-d14 (Surr)

Surrogate Summary

Client: Short Elliott Hendrickson, Inc. dba SEH
Job ID: 310-330207-1
Project/Site: Duluth Airport Midfield Ramp

Method: WI-GRO - Wisconsin - Gasoline Range Organics (GC)

Matrix: Solid **Prep Type: Total/NA**

		Percent Surrogate Recovery (Acceptance Limits)								
		BFB								
Lab Sample ID	Client Sample ID	(80-120)

Accreditation/Certification Summary

Client: Short Elliott Hendrickson, Inc. dba SEH
Job ID: 310-330207-1
Project/Site: Duluth Airport Midfield Ramp

Laboratory: Eurofins Cedar Falls

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Minnesota	NELAP	019-999-319	12-31-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Moisture		Solid	Percent Moisture
Moisture		Solid	Percent Solids

Laboratory: Eurofins Cleveland

The accreditations/certifications listed below are applicable to this report.

Authority	Program	Identification Number	Expiration Date
Minnesota	NELAP	039-999-348	12-31-26

Method Summary

Client: Short Elliott Hendrickson, Inc. dba SEH
Job ID: 310-330207-1

Cooler/Sample Receipt and Temperature Log Form

Client Information

Client: SEH

City/State: CITY St Paul | STATE MN | Project:

Receipt Information

Date/Time Received: DATE 04/22/26 | TIME 1320 | Received By: EJ

Delivery Type: ☐ UPS ☐ FedEx ☐ FedEx Ground ☐ US Mail ☐ Spee-Dee ☒ Lab Courier ☐ Lab Field Services ☐ Client Drop-off ☐ Other:_____

Condition of Cooler/Containers

Sample(s) received in Cooler? ☒ Yes ☐ No *If yes:* Cooler ID:

Multiple Coolers? ☐ Yes ☒ No *If yes:* Cooler # _____ of _____

Cooler Custody Seals Present? ☐ Yes ☒ No *If yes:* Cooler custody seals intact? ☐ Yes ☐ No

Sample Custody Seals Present? ☐ Yes ☒ No *If yes:* Sample custody seals intact? ☐ Yes ☐ No

Trip Blank Present? ☒ Yes ☐ No *If yes:* Which VOA samples are in cooler? ↓

All

Temperature Record

Coolant: ☒ Wet ice ☐ Blue ice ☐ Dry ice ☐ Other:_____ ☐ NONE

Thermometer ID: AA | Correction Factor (°C): 0

• **Temp Blank Temperature** – If no temp blank, or temp blank temperature above criteria, proceed to Sample Container Temperature

Uncorrected Temp (°C). 4.8 | Corrected Temp (°C): 4.8

• **Sample Container Temperature**

	CONTAINER 1	CONTAINER 2
Container(s) used:		
Uncorrected Temp (°C):		
Corrected Temp (°C).		

Exceptions Noted

1) If temperature exceeds criteria, was sample(s) received same day of sampling? ☐ Yes ☐ No
   a) *If yes:* Is there evidence that the chilling process began? ☐ Yes ☐ No

2) If temperature is <0°C, are there obvious signs that the integrity of sample containers is compromised? (e.g., bulging septa, broken/cracked bottles, frozen solid?) ☐ Yes ☐ No

NOTE If yes, contact PM before proceeding If no, proceed with login

Additional Comments

only received 2 125mL container for water for Rinsate Blank

Note: Since laboratory accreditations are subject to change Eurofins Environment Testing North Central LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing North Central LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing North Central, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing North Central, LLC.

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing North Central, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing North Central, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing North Central LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing North Central, LLC.

Possible Hazard Identification *Unconfirmed*	***Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)*** ☐ *Return To Client* ☐ *Disposal By Lab* ☐ *Archive For* _____ *Months*

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

Job Narrative
310-331056-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 5/1/2026 1:15 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.2°C.

GC/MS VOA
Method 8260D: The method requirement for no headspace was not met. The following volatile sample was analyzed with headspace in the sample container(s): Trip Blank Water (310-331056-2).

Method 8260D: The continuing calibration verification (CCV) associated with batch 310-487948 recovered above the upper control limit for Styrene(23%D) and Isopropylbenzene(26%D). The LCS associated with this CCV passes CCV criteria for the affected analytes; therefore, the data have been reported. The associated sample is:(CCV 310-487948/3).

Method 8260D: The continuing calibration verification (CCV) associated with batch 310-487948 recovered above the upper control limit for Vinyl chloride(37%D), Chloroethane(47%D), Chloromethane(29%D), Trichlorofluoromethane(33%D), Dichlorofluoromethane(38%D), and Bromomethane(27%D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is:(CCV 310-487948/4).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E: The continuing calibration verification (CCV) associated with batch 310-488499 recovered above the upper control limit for benzo (a) pyrene (22 %D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is:(CCV 310-488499/4).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Gasoline Range Organics
Method WI-GRO: The method requirement for no headspace was not met. The following volatile sample was analyzed with headspace in the sample container(s): Trip Blank Water (310-331056-2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

PFAS
Method 1633A: The continuing calibration verification (CCV) associated with batch 240-700716 recovered above the upper control limit for affected analytes. The samples associated with this CCV below the reporting limit for the affected analytes; therefore, the data have been reported. The associated sample is:MW-12-5.95W (310-331056-1).

Method 1633A: The continuing calibration verification (CCV) recovered outside of control limits for IDA compound(s) (flagged). Section 14.3.3 of the finalized EPA 1633 states that the recovery of target analytes for the CCV must be within 70 - 130%, unless the analyte is not of concern for a given project. Since target analyte(s) associated with this IDA are within spec, data is reported. The following sample is impacted: MW-12-5.95W (310-331056-1).

Job ID: 310-331056-1 (Continued)

Method 1633A: The low level continuing calibration verification (CCVL) associated with batch 240-700716 recovered above the upper control limit for affected analytes. The samples associated with this CCVL were below the reporting limit for the affected analytes; therefore, the data have been reported.

Method 1633A: The low level continuing calibration verification (CCVL) associated with batch 240-700716 recovered outside of control limits for IDA compound(s) (flagged). Section 14.3.3 of the finalized EPA 1633 states that the recovery of target analytes for the CCVL must be within 70 - 130%, unless the analyte is not of concern for a given project. Since target analyte(s) associated with this IDA are within spec, data is reported.

Method 1633A: The laboratory control sample (LCS) for preparation batch 240-700664 and analytical batch 240-700716 recovered outside control limits for affected analytes.These analytes were biased high in the LCS and were below the reporting limit in the associated samples; therefore, the data have been reported.

Method 1633A: The low level laboratory control sample (LLCS) for preparation batch 240-700664 and analytical batch 240-700716 recovered outside control limits for affected analytes. These analytes were biased high in the LLCS and were below the reporting limit in the associated samples; therefore, the data have been reported.

Method 1633A: Re-prep at full volume due to prior batch QC failure.

MW-12-5.95W (310-331056-1)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Definitions/Glossary

Client: Short Elliott Hendrickson, Inc. dba SEH
Job ID: 310-331056-1
Project/Site: Duluth Airport Midfield Ramp

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.

LCMS

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Cooler/Sample Receipt and Temperature Log Form

Client Information

Client: SEH

City/State: CITY | STATE | Project:

Receipt Information

Date/Time Received: DATE 5/1/26 | TIME 1315 | Received By: A

Delivery Type: ☐ UPS ☐ FedEx ☐ FedEx Ground ☐ US Mail ☐ Spee-Dee
☒ Lab Courier ☐ Lab Field Services ☐ Client Drop-off ☐ Other:_____

Condition of Cooler/Containers

Sample(s) received in Cooler? ☒ Yes ☐ No — *If yes:* Cooler ID:

Multiple Coolers? ☐ Yes ☒ No — *If yes:* Cooler # _____ of _____

Cooler Custody Seals Present? ☐ Yes ☒ No — *If yes:* Cooler custody seals intact? ☐ Yes ☐ No

Sample Custody Seals Present? ☐ Yes ☒ No — *If yes:* Sample custody seals intact? ☐ Yes ☐ No

Trip Blank Present? ☒ Yes ☐ No — *If yes:* Which VOA samples are in cooler? ↓

All

Temperature Record

Coolant: ☒ Wet ice ☐ Blue ice ☐ Dry ice ☐ Other:_____ ☐ NONE

Thermometer ID: DD | Correction Factor (°C): +0.0

• Temp Blank Temperature – If no temp blank, or temp blank temperature above criteria, proceed to Sample Container Temperature

Uncorrected Temp (°C): 1.2 | Corrected Temp (°C): 1.2

• Sample Container Temperature

	CONTAINER 1	CONTAINER 2
Container(s) used:		
Uncorrected Temp (°C):		
Corrected Temp (°C):		

Exceptions Noted

1) If temperature exceeds criteria, was sample(s) received same day of sampling? ☐ Yes ☐ No
   a) *If yes:* Is there evidence that the chilling process began? ☐ Yes ☐ No

2) If temperature is <0°C, are there obvious signs that the integrity of sample containers is compromised? (e g , bulging septa, broken/cracked bottles, frozen solid?) ☐ Yes ☐ No

NOTE If yes, contact PM before proceeding. If no, proceed with login

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

SEQ NOTES

GENERAL: TEMPORARY SANITARY FACILITIES, WATER FOR DUST CONTROL, AND TEMPORARY WATER SUPPLY FOR CONSTRUCTION OPERATIONS ARE CONSIDERED INCIDENTAL TO OTHER ITEMS OF PROJECT WORK.

40-05: PAID FOR BASED ON PERCENT COMPLETE.

40-08: RESTORATION OF EXPANDED CONTRACTOR STORAGE/STOCKPILE AREA WILL INCLUDE GRADING, TURF ESTABLISHMENT, SOIL RIPPING/SCARIFICATION TO A DEPTH OF 6-INCHES, AND ANY OTHER MEASURES REQUIRED TO RETURN THE AREA TO PRE-CONSTRUCTION CONDITIONS OR ESTABLISHMENT OF GRASS, AS APPROVED BY ENGINEER. PAID FOR BASED ON PERCENT COMPLETE.

50-07: PAID FOR BASED ON PERCENT COMPLETE.

60-05: PAID ON A MONTHLY BASIS (LS*MONTHS WORKED/TOTAL ANTICIPATED MONTHS OF WORK).

70-08: INCLUDES ALL TRAFFIC CONTROL SIGNAGE, BARRICADES, TEMPORARY FENCING, TRAFFIC CONTROL DEVICES, AND ALL ITEMS PERTAINING TO SECURITY, AND PHASING. PAID FOR BASED ON PERCENT COMPLETE.

C-100: PAID FOR BASED ON PERCENT COMPLETE.

C-105: MOBILIZATION SHALL BE LIMITED TO 10-PERCENT OF THE TOTAL PROJECT COST.

D-701: CONNECTIONS TO EXISTING STORM SEWER PIPE, STRUCTURES, DRAIN TILE, INSPECTION PITS, AND CLEANOUTS ARE ALL INCIDENTAL TO THESE PAY ITEMS.

D-705: CONNECTIONS TO EXISTING STORM SEWER PIPE, STRUCTURES, DRAIN TILE, INSPECTION PITS, AND CLEANOUTS ARE ALL INCIDENTAL TO THESE PAY ITEMS. ALL ITEMS REQUIRED FOR DRAIN TILE (TRENCHING, FILTER MATERIAL, FABRIC, CONNECTIONS, BACKFILLING, AND ASSOCIATED COMPACTION) ARE INCIDENTAL TO ITEM.

D-751: CONNECTIONS TO EXISTING STORM SEWER PIPE, STRUCTURES, DRAIN TILE, INSPECTION PITS, AND CLEANOUTS ARE ALL INCIDENTAL TO THESE PAY ITEMS.

L-108, L-110, L-125: NO PRICE ADJUSTMENT WILL BE MADE BASED ON PERCENTAGE OF QUANTITY USED. THE ENGINEER WILL PROVIDE A NOTICE TO PROCEED SPECIFICALLY FOR WIRE & CABLE ITEMS PRIOR TO ORDERING TO ENSURE THE CORRECT AMOUNT IS OBTAINED..

P-101 REMOVE BITUMINOUS PAVEMENT ITEM: WORK INCLUDES REMOVAL OF BITUMINOUS PAVEMENT, REGARDLESS OF ACTUAL PAVEMENT THICKNESS ENCOUNTERED. SEE APPENDIX A - GEOTECHNICAL REPORT FOR BORING LOGS REFLECTING EXISTING PAVEMENT THICKNESS.

P-101: REMOVE CONCRETE PAVEMENT ITEM: WORK INCLUDES REMOVAL OF CONCRETE PAVEMENT REGARDLESS OF ACTUAL PAVEMENT THICKNESS ENCOUNTERED. SEE APPENDIX A - GEOTECHNICAL REPORT FOR BORING LOGS REFLECTING EXISTING PAVEMENT THICKNESS.

P-101 PIPE REMOVAL (ALL): REQUIRED PIPE/STRUCTURE BULKHEADS ARE INCIDENTAL TO PIPE REMOVAL.

P-152: SEE EARTHWORK SUMMARY ON SHEET G6.00 AND C4.13.

P-152 UNCLASSIFIED OVER-EXCAVATION (EX): SEE EARTHWORK SUMMARY ON SHEET G6.00. ITEM INCLUDES MATERIAL EXCAVATED BELOW THE TYPICAL SECTION, AS DIRECTED BY ENGINEER. EXCAVATED MATERIAL TO BECOME PROPERTY OF CONTRACTOR, REPLACEMENT OF EXCAVATED MATERIAL WITH SUITABLE GRANULAR MATERIAL WILL BE INCIDENTAL TO THE UNCLASSIFIED OVER EXCAVATION.

P-152: ALL ON-SITE STRIPPING, SALVAGING, STOCKPILING, REPLACING AND SPREADING QUANTITY WILL BE PAID FOR UNDER COMMON EXCAVATION PRIOR TO THE PLACEMENT OF TOPSOIL BORROW (OBTAINED OFF-SITE) BY CONTRACTOR, IF NEEDED.

P-209: CONTRACTOR MAY SUBSTITUTE P-219 FOR P-209 WITH NO ADJUSTMENT TO UNIT PRICE.

I HEREBY CERTIFY THAT THIS PLAN WAS PREPARED BY ME OR UNDER MY DIRECT SUPERVISION AND THAT I AM A DULY LICENSED LICENSE PROFESSIONAL UNDER THE LAWS OF THE STATE OF STATE.

SEQ NOTES

GENERAL: TEMPORARY SANITARY FACILITIES, WATER FOR DUST CONTROL, AND TEMPORARY WATER SUPPLY FOR CONSTRUCTION OPERATIONS ARE CONSIDERED INCIDENTAL TO OTHER ITEMS OF PROJECT WORK.

50-07: PAID FOR BASED ON PERCENT COMPLETE.

60-05: PAID ON A MONTHLY BASIS (LS*MONTHS WORKED/TOTAL ANTICIPATED MONTHS OF WORK).

70-08: INCLUDES ALL TRAFFIC CONTROL SIGNAGE, BARRICADES, TEMPORARY FENCING, TRAFFIC CONTROL DEVICES, AND ALL ITEMS PERTAINING TO SECURITY, AND PHASING. PAID FOR BASED ON PERCENT COMPLETE.

C-105: MOBILIZATION SHALL BE LIMITED TO 10-PERCENT OF THE TOTAL PROJECT COST.

D-705: CONNECTIONS TO EXISTING STORM SEWER PIPE, STRUCTURES, DRAIN TILE, INSPECTION PITS, AND CLEANOUTS ARE ALL INCIDENTAL TO THESE PAY ITEMS. ALL ITEMS REQUIRED FOR DRAIN TILE (TRENCHING, FILTER MATERIAL, FABRIC, CONNECTIONS, BACKFILLING, AND ASSOCIATED COMPACTION) ARE INCIDENTAL TO ITEM.

D-751: CONNECTIONS TO EXISTING STORM SEWER PIPE, STRUCTURES, DRAIN TILE, INSPECTION PITS, AND CLEANOUTS ARE ALL INCIDENTAL TO THESE PAY ITEMS.

L-108, L-110, L-125: NO PRICE ADJUSTMENT WILL BE MADE BASED ON PERCENTAGE OF QUANTITY USED. THE ENGINEER WILL PROVIDE A NOTICE TO PROCEED SPECIFICALLY FOR WIRE & CABLE ITEMS PRIOR TO ORDERING TO ENSURE THE CORRECT AMOUNT IS OBTAINED.

P-101 REMOVE BITUMINOUS PAVEMENT ITEM: WORK INCLUDES REMOVAL OF BITUMINOUS PAVEMENT, REGARDLESS OF ACTUAL PAVEMENT THICKNESS ENCOUNTERED. SEE APPENDIX A - GEOTECHNICAL REPORT FOR BORING LOGS REFLECTING EXISTING PAVEMENT THICKNESS.

P-101: REMOVE CONCRETE PAVEMENT ITEM: WORK INCLUDES REMOVAL OF CONCRETE PAVEMENT REGARDLESS OF ACTUAL PAVEMENT THICKNESS ENCOUNTERED. SEE APPENDIX A - GEOTECHNICAL REPORT FOR BORING LOGS REFLECTING EXISTING PAVEMENT THICKNESS.

P-101 PIPE REMOVAL (ALL): REQUIRED PIPE/STRUCTURE BULKHEADS ARE INCIDENTAL TO PIPE REMOVAL.

P-152: SEE EARTHWORK SUMMARY ON SHEET G6.01.

P-152 UNCLASSIFIED OVER-EXCAVATION (EX): SEE EARTHWORK SUMMARY ON SHEET G6.01. ITEM INCLUDES MATERIAL EXCAVATED BELOW THE TYPICAL SECTION, AS DIRECTED BY ENGINEER. EXCAVATED MATERIAL TO BECOME PROPERTY OF CONTRACTOR, REPLACEMENT OF EXCAVATED MATERIAL WITH SUITABLE GRANULAR MATERIAL WILL BE INCIDENTAL TO THE UNCLASSIFIED OVER EXCAVATION.

P-152: ALL ON-SITE STRIPPING, SALVAGING, STOCKPILING, REPLACING AND SPREADING QUANTITY WILL BE PAID FOR UNDER COMMON EXCAVATION PRIOR TO THE PLACEMENT OF TOPSOIL BORROW (OBTAINED OFF-SITE) BY CONTRACTOR, IF NEEDED.

P-209: CONTRACTOR MAY SUBSTITUTE P-219 FOR P-209 WITH NO ADJUSTMENT TO UNIT PRICE.

STATEMENT OF ESTIMATED QUANTITIES NOTES	
LINE NO.	ITEM NOTE
ALL	**UNLESS OTHERWISE NOTED IN THE FOLLOWING NOTES OR ELSEWHERE IN THE DRAWINGS AND SPECIFICATIONS, FULL COMPENSATION FOR ALL ITEMS SHALL INCLUDE FURNISHING ALL MATERIALS AND FOR ALL PREPARATION, ASSEMBLY, AND INSTALLATION OF THESE MATERIALS, AND FOR ALL LABOR, EQUIPMENT, TOOLS, AND INCIDENTALS NECESSARY TO COMPLETE THESE ITEMS.**
1	INCLUDES SWEEPING AND ANY OTHER MEASURES REQUIRED TO MAINTAIN AND RETURN THE HAUL ROUTE TO PRE-CONSTRUCTION CONDITIONS OR BETTER, AS APPROVED BY RPR/ENGINEER. INCLUDES WORK REQUIRED TO REINFORCE EAST-WEST PORTION OF MALSTROM ST WITH MILLINGS FROM THE ADJACENT TAXIWAY A RECONSTRUCTION - PHASE 7 PROJECT, PRIOR TO HAULING OPERATIONS FOR THIS MIDFIELD RAMP REPAIR - PHASE 4 PROJECT.
3	INCLUDES LOW-PROFILE BARRICADES AND TRAFFIC SIGNAGE AS SHOWN ON THE CONSTRUCTION SAFETY PLAN AND CONSTRUCTION SIGNAGE PLAN. INCLUDES INSTALLATION, MAINTENANCE AS NEEDED, RELOCATION AS NEEDED, AND REMOVAL. INCLUDES TEMPORARY FENCING AND RAISED TARP TO CEILING INSIDE EASTERN TWO HANGAR BAYS. WESTERN TWO HANGAR BAYS DO NOT OPEN, SO DO NOT REQUIRE THIS CONTROL MEASURE.
4, 5	INCLUDES INSTALLATION, MAINTENANCE, AND REMOVAL.
6	VEHICLE TRACKING PAD, INCLUDES INSTALLATION, MAINTENANCE, AND REMOVAL.
7	MOBILIZATION SHALL BE LIMITED TO 10% OF THE TOTAL PROJECT COST. THIS ITEM INCLUDES EXPENSES FOR WORK AND OPERATIONS NECESSARY FOR THE MOVEMENT OF PERSONNEL, EQUIPMENT, MATERIAL, AND SUPPLIES TO AND FROM THE PROJECT SITE FOR WORK ON THE PROJECT.
9	INCLUDES 8" PVC PIPE AND WATERTIGHT CONNECTION TO STORM SEWER STRUCTURES.
10	INCLUDES TEMPORARY SHORING AS NEEDED, WATERTIGHT CONNECTIONS OF BUILDING DOWNSPOUT DRAINS AS NEEDED, TRENCHING, EXCAVATION, PIPE BEDDING, BACKFILL TO SUBGRADE ELEVATION, AND COMPACTION.
11	INCLUDES TRENCHING, EXCAVATION, PIPE BEDDING, BACKFILL TO SUBGRADE ELEVATION, AND COMPACTION.
12	INCLUDES 12" X 6" PVC REDUCER AND 6" PVC DRAIN PIPE ROUTED TO 12" STORM SEWER OR STORM SEWER STRUCTURE, AS INDICATED ON THE PLANS.
13	INCLUDES TRENCHING, GEOTEXTILE FABRIC, PIPE, FILTER SOCK, FILTER AGGREGATE, BACKFILLING, AND COMPACTION.
14, 15	INCLUDES TEMPORARY SHORING AS NEEDED, WATERTIGHT PIPE CONNECTIONS, CONNECTIONS TO EXISTING PIPES, RUBBER GASKETS, RAMNECK, ADJUSTMENT RINGS, AND FRAME AND GRATE.
16	INCLUDES REMOVAL AND DISPOSAL OF FRAMES AND GRATES.
17	INCLUDES TEMPORARY SHORING AS NEEDED TO SUPPORT REMOVAL OF 10" STORM SEWER PIPE ALONG HANGAR 104.
19	INCLUDES TEMPORARY SHORING AS NEEDED.
21	INCLUDES FULL DEPTH SAWCUT ALONG FACE OF HANGAR 104.
22	INCLUDES REMOVAL OF EXISTING AIRCRAFT TIE-DOWNS. CONTRACTOR WILL BE PAID FOR PAVEMENT REMOVAL ONLY IN THIS LINE ITEM. THIS INCLUDES ALL UNDERLYING CONCRETE AND BITUMINOUS PAVEMENT. ANY OTHER PAVEMENT SECTION REMOVALS SHALL BE PAID AS COMMON EXCAVATION.
23	EXCAVATED VOLUME. INCLUDES ALL EXCAVATION REQUIRED TO REACH THE DEPTH REQUIRED FOR INSTALLATION OF THE TYPICAL SECTION. ALL EXCESS QUANTITIES RESULTING FROM EXCAVATIONS SHALL BE HAULED OFFSITE BY CONTRACTOR. SEE EARTHWORK NOTES, SHEET G3.02.
24	EXCAVATED VOLUME. INCLUDES REMOVAL AND REPLACEMENT OF UNSUITABLE MATERIAL WITH SUITABLE MATERIAL (P-154) AS DIRECTED BY RPR/ENGINEER, AND INCLUDES SUBGRADE PROOF ROLLING.
25	INCLUDES ALL GRADING, COMPACTION, AND ANY OTHER NECESSARY MEASURE TO PROVIDE AN ACCEPTABLE BASE SURFACE TO THE SATISFACTION OF THE RPR/ENGINEER AND SPECIFICATIONS (INCLUDES ALL AREAS TO BE PAVED).
26	DOES NOT INCLUDE MATERIAL REQUIRED FOR SUITABLE OVERLAP AND/OR STITCHING OF THE GEOTEXTIEL FABRIC PER THE SPECIFICATION.
27	COMPACTED VOLUME PER THE DIMENSIONS IN THE TYPICAL SECTION AND DETAILS.
28	COMPACTED VOLUME PER THE DIMENSIONS IN THE TYPICAL SECTION AND DETAILS. CONTRACTOR CAN SUBSTITUTE FAA P-219 FOR FAA P-209 WITH NO ADDITIONAL PRICE ADJUSTMENT.
29	INCLUDES DOWEL BARS AND BASKETS AND DRILLING AND EPOXYING OF DOWEL BARS.
30	INCLUDES DOWEL BARS AND BASKETS, REBAR, WIRE MESH, AND DRILLING AND EPOXYING OF DOWEL BARS.
31	THIS ITEM IS FOR PERFORMING CONCRETE SLAB REPAIRS AS NECESSARY ALONG INTERFACE OF PROPOSED TRENCH DRAIN CONCRETE AND EXISTING INTERIOR FLOOR SLAB OF EASTERN TWO HANGAR 104 BAYS.
32	INCLUDES NECESSARY STEEL REINFORCEMENT, DOWEL BARS, AND BITUMINOUS EXPANSION MATERIAL BACKER ROD AND SEALANT.
33	INCLUDES SAWCUTTING AND SEALANT, AND NON-EXTRUDING PREMOLDED COMPRESSIBLE MATERIAL WHERE REQUIRED.
34	DOES NOT INCLUDE OR REQUIRE REFLECTIVE BEADS.
35	DOES NOT INCLUDE REQUIRED REFLECTIVE BEADS.
36	REFLECTIVE MEDIA CALCULATED PER TABLE IN P-620-2.2.
1 37	IF NEEDED, CONTRACTOR IS RESPONSIBLE FOR OBTAINING ALL NECESSARY PERMITS FOR DEWATERING AND MUST PROPERLY DISPOSE OF CONTAIMINATED GROUND WATER PER REGULATORY REQUIREMENTS AS CALLED OUT IN 02 60 10.
GENERAL	**TEMPORARY SANITARY FACILITIES, WATER FOR DUST CONTROL, AND TEMPORARY WATER ARE CONSIDERED INCIDENTAL TO THE PROJECT.**
