Addendum 1
Solicitation 26-4406
DLH Taxiway A Reconstruction Ph 7 and Midfield Ramp Repair Ph 4

This addendum serves to notify all bidders of the following changes to the solicitation documents:

All changes are identified in the attached documents provided by the Project Engineer.

Please acknowledge receipt of this Addendum by checking the acknowledgement box within the solicitation at www.bidexpress.com.

Posted: May 27, 2026

DOCUMENT 00 00 11

ADDENDUM NO. 1
May 26, 2026

Taxiway A Reconstruction - Phase 7 and Midfield Ramp Repair - Phase 4
City of Duluth No. 26-4406
Duluth International Airport (DLH)
Duluth Airport Authority (DAA)
AIP No. 3-27-0024-084-2025
SP Nos. A6901-226 & A6901-229

SEH No. DULAI 186683 & 188850

From: Short Elliott Hendrickson Inc.
3535 Vadnais Center Drive
St. Paul, MN 55110-3507
651.490.2000

To: Document Holders

DOCUMENT HOLDERS on the above-named project are hereby notified that this document shall be appended to, take precedence over and become part of the original bidding documents dated May 8, 2026 for this work. Bids submitted for the construction of this work shall conform to this document.

This addendum consists of the revised bid form reflected in BidExpress, the attached Pre-Bid Meeting Minutes, revisions to the specifications, and revisions to drawings.

Changes to Bidding Requirements:

1. Document 00 41 00 – Bid Form: The Bid Form has been revised to reflect the addition of bid items for specification section 02 60 10 – Handling of Contaminated Soils/Debris. The Bid Form is updated in BidExpress.

Changes to Specifications:

2. Specification 02 60 10 – Handling of Contaminated Soils/Debris has been revised to include updated data and specifications regarding handling of contaminated soils/debris and contaminated water/groundwater at the project site, based on the inclusion of environmental reports (Appendices G, H, I, and J) into the contract requirements per this addendum. DELETE in its entirety and REPLACE with the attached revised specification section.

3. Appendix A.1 – Geotechnical Evaluation Report – Taxiway A Reconstruction Phase 7: Appendix is included to reflect the exploration and evaluation of geotechnical results for the project site.

4. Appendix G – Phase I ESA – Taxiway A Reconstruction Phase 7: Appendix is included to address observed project site environmental contamination based on spring 2026 field investigation.

5. Appendix H – Phase II ESA – Taxiway A Reconstruction Phase 7: Appendix is included to address observed project site environmental contamination based on spring 2026 field investigation.

6. Appendix I – Response Action Plan/Construction Contingency Plan – Taxiway A Reconstruction Phase 7: Appendix is included to address observed project site environmental contamination based on spring 2026 field investigation.

7. Appendix J – Phase II ESA – Midfield Ramp Repair Phase 4: Appendix is included to address observed project site environmental contamination based on spring 2026 field investigation.

Changes to Drawings:

8. Plan Set A – Drawings G5.03, G5.04, and G5.05 – Statement of Estimated Quantities: Updated to reflect the addition of bid items for specification section 02 60 10 – Handling of Contaminated Soils/Debris. DELETE in their entirety and REPLACE with the attached revised drawings.

9. Plan Set B – Drawing G3.03 – Statement of Estimated Quantities: Updated to reflect the addition of a bid item for specification section 02 60 10 – Handling of Contaminated Soils/Debris. DELETE in its entirety and REPLACE with the attached revised drawing.

Attachments:
Pre-Bid Meeting Minutes
Revised Specification Sections
Revised Drawings

NOTE: Receipt of this Addendum No. 1, dated May 26, 2026 shall be acknowledged on BidExpress. Failure to do so will not allow Bidder to submit Bid.

Building a Better World for All of Us®

PRE-BID MEETING MINUTES

RE: Taxiway A Reconstruction Phase 7 and Midfield Ramp Repair Phase 4
Duluth International Airport (DLH)

Date of Meeting: Thursday, May 21, 2026

Project Manager: Allison Andrashko, Jarrod Nelson

Time of Meeting: 1:30 p.m.

SEH No.: DULAI 186683, 188850 16.00

Location of Meeting: Virtual MS Teams / Airport Conference Room

Attendees: Attendance list is attached with issue of meeting minutes.

The following items were discussed at the above referenced meeting:

I. **Project Representatives**

A. Owner Representatives – Duluth Airport Authority
   1. **Ryan Welch – DAA, Director of Operations**
   2. **Tristan Durfee – DAA, Airside Manager**
   3. Matt Snell – DAA, Public Safety Manager
   4. Paul Sinnot – DAA, Airside

B. Engineer Representative – Short Elliott Hendrickson, Inc.
   1. Shawn McMahon, PE (MN, WI, IA, SD) – SEH, Project Principal, 651.925.7541
   2. Jarrod Nelson, PE (MN, IA, ND, SD) – SEH, Project Manager, 651.325.8161
   3. Allison Andrashko, PE (MN) – SEH, Project Manager, 507.261.7617
   4. Jake Stiebler, PE – SEH, Project Engineer, 651.269.5923
   5. Ben Wolf, PE – SEH, Structural Engineer
   6. Mark Giddings, PE – Burns & McDonnell, Electrical Project Manager
   7. Derek Bruemmer, PE – Burns & McDonnell
   8. Sam Yunker, EIT – Burns & McDonnell
   9. Steven Thayer – Braun Intertec, Geotechnical Engineer

II. **Project Information**

A. Please submit all bidding questions via email to jnelson@sehinc.com, copying aandrashko@sehinc.com

B. Project Documents: Bidding Documents are available to view and download at no cost as www.bidexpress.com. Bidders must create a free account with Bid Express®; and login to search for city projects (search by “City of Duluth” or bid number). Bids will only be received electronically through Bid Express®.

C. Project Award: Project award will be based upon overall lowest base bid cost and available funding at the time of bid opening.

D. Please review **Article 3 – Qualifications of Bidders** included in Instructions to Bidders of the Project Manual for required documents to be submitted during the bid

1. Bid Security (5%, sent separately via email prior to bid opening), Byrd Anti-Lobbying Amendment Certification, Bid Item Prices, Acknowledgement of Addenda, Declaration of Non-Collusion, Responsible Contractor Verification & Cert. of Compliance, First Tier Subcontractor List, and DBE certification reflecting intended DBE utilization percentage.

2. Items to be submitted within 72 hours after bid include: Signed Bid Form (00 41 00), List of Proposed Suppliers (00 43 37), Certificate of Compliance with Minnesota Statues 363A.36 (00 45 47), and Buy American Certification (00 45 48).

E. Major Items of Work Include:

Schedule A – Taxiway A Reconstruction – Phase 7 (Base Bid): 25,000 SY 13-inch P-501 PCC, 10,000 tons bituminous pavement (State Spec., P-401, and P-403 mixes), 43,000 CY excavation, 1,500 CY pond dredging, 7,000 CY P-209 crushed aggregate base, 18,000 CY P-154 granular borrow, pavement markings, turf restoration, conduit, airfield lighting and signage, electrical duct bank and conduit, 1,300 LF storm sewer pipe with storm structures, and 7,000 LF of drain tile pipe with structures.

Schedule B – Taxiway A Reconstruction – Phase 7 (Alternate Bid): 11,000 SY 13-inch P-501 PCC, 5,000 tons bituminous pavement (State Spec. and P-403 mixes), 15,000 CY excavation, 3,000 CY P-209 crushed aggregate base, 9,000 CY P-154 granular borrow, pavement markings, turf restoration, conduit, airfield lighting and signage, and 2,000 LF of drain tile pipe with structures.

Schedule C – Midfield Ramp Repair – Phase 4 (Base Bid): 1,890 SY 12-inch P-501 PCC, 1,330 CY excavation, 615 CY P-209 crushed aggregate base, 910 CY P-154 granular borrow, pavement markings, 472 LF of storm drain pipe and structures, 550 LF drain tile pipe, 420 LF trench drain installation.

F. Anticipated Project Schedule:
1. Receive Bids: June 4, 2026
2. Anticipated Contract Award: June 2026
3. Anticipated Start of Construction: May 17, 2027 (Taxiway A Phase 4 Base Bid Construction – for 85 Calendar Days)
4. No Construction or Contractor Access during DLH Airshow: June 23 – June 28, 2027
5. Taxiway A Phase 7 Alternate Bid Construction (if selected) and Midfield Ramp Repair – Phase 4 work can commence on June 29, 2027 after Contractor regains access to airfield (30 additional calendar days allowed for the Phase 7 Alternate Bid construction and 80 calendar days total for Midfield Ramp Repair Phase 4 work).
6. Anticipated Substantial Completion:
   a. August 9, 2027 (Taxiway A – Phase 7 Base Bid)
   b. September 8, 2027 (Taxiway A – Phase 7 Base Bid + Alternate Bid)
   c. September 17, 2027 (Midfield Ramp – Phase 4)

G. Phasing (See Construction Safety Plan Sheet):
1. Taxiway A Reconstruction, Phase 7
   a. Phase 7A, Phase 7A-1 shall be complete in 85 calendar days, starting on May 17, 2027, substantially complete by August 9, 2027.

(1) Phase 7A-1 construction requires that Runway 9/27 shall be closed for one coordinated 60-hour continuous weekend period and an additional 5 periods of weekday nighttime work for work to be performed inside the designated runway safety area at the location of existing Taxiway A2. These work periods will all be coordinated and approved by the DAA. Work in this area includes the removal of existing taxiway pavement, regrading of the resulting grass area near the runway, and construction of a new runway shoulder pavement and new runway edge lighting.

b. Phase 7B cannot commence before June 29, 2027 and the contractor will be given an additional 30 calendar days from base bid only with substantial completion on September 8, 2027.
   (1) Phase 7B-1 construction requires that Runway 9/27 shall be closed for one additional coordinated 60-hour continuous weekend period for work to be performed inside the designated runway safety area at the location of existing Taxiway A1, in addition to the weekend closure already designated for Phase 7A-1 construction. This work period will be coordinated and approved by the DAA. Work in this area includes the removal of existing taxiway pavement and reconstruction of Taxiway A1 pavement.

2. Midfield Ramp Repair, Phase 4 cannot commence before June 29, 2027 and work shall be complete in 80 calendar days, substantially complete by September 17, 2027.
   a. Concrete paving operations shall not commence for Midfield Ramp Repair construction until after Taxiway A reconstruction concrete paving operations have been completed. This requirement ensures that the taxiway paving operation is prioritized over the ramp paving operation.

H. Airport Security:
1. Bidders must thoroughly examine Project Documents for security related requirements.
2. Airport shall remain in full operation during construction except where required for project specific closures
3. Airfield Safety and Security Training will be held at scheduled times, where the following topics will be discussed:
   a. Project Signage for Haul Routes and Site Access
   b. Procedure for Receipt of Deliveries
   c. Airfield and Site Security
   d. Badging Requirements
4. Failure to comply with safety and phasing plans that results in a runway incursion or vehicle deviation will result in a penalty of $1,000. Security violations could result in a penalty of up to $10,000 per occurrence.
5. Contractor is required to hire a third-party Professional Security Firm, for which DAA approval of security firm is required prior to contract award.

I. Access and Haul Routes
1. Reinforcement of the east/west section of Malstrom using millings from the Taxiway A Phase 7 project area required prior to hauling operations for Midfield Ramp Phase 4.
2. Haul route to airfield Taxiway A reconstruction site will be from Highway 53 on the west side of the airfield via one of two routes (see Sheet G1.00):
   a. To Cirrus Drive and to Airport Road to access both the west side contractor storage areas and the airfield access gate.
   b. To Lavaque Road to access the airfield access gate.
   c. Haul route to Taxiway A reconstruction north side stormwater pond dredging site requires a route around the west end of the airport and then re-accessing the airfield from an access gate on the north side. See Sheet G4.02.

(1) DAA – For the purposes of bidding, a gate guard shall be stationed at both north side airfield gates for the north side stormwater pond dredging work, as indicated on Sheet G4.02.

d. Haul route to Taxiway A reconstruction southeast stormwater pond improvements site requires a primarily landside access route as reflected in Sheet G4.03.

3. Haul route to Midfield Ramp reconstruction site is intended to use the South SRE Gate. See Midfield Ramp Phase 4 Sheet G1.00.

J. Staging and Storage
1. Contractor can pre-position equipment for project start. No contractor presence at airport allowed during DLH Airshow.

K. Quality Control Plan Required

III. Contract Requirements

A. Construction Staking – Contractor's Responsibility

B. Quantity surveys are required to be submitted for payment. As-built survey data to be collected and forwarded to Engineer. See Field Engineering in project manual.

C. Disadvantaged Business Enterprise – DBE Goal of 0.0%

D. Wage Rates
1. Equal Employment Opportunity (EEO)
2. State and Federal prevailing wage rate requirements

E. Buy American Certification

F. Permits
1. City of Duluth Stormwater permit
   a. Paid for by the contractor.
2. NPDES permit
   a. Paid for by the contractor.
3. City of Duluth Haul Route Application
   a. Paid for by the contractor.
4. City of Duluth Grading Permit
   a. Paid for by the contractor.
5. Dewatering (contaminated) for storm sewer installation (if needed)
   a. Paid for by the contractor
   b. Contractor – Is the dewatering of contaminated groundwater part of the MPCA NPDES permit, or what permit(s) will be required for this work?
      (1) SEH – More information regarding permitting for this work will be provided via Addendum No. 1.

IV. Project Work

A. General Scope
1. Batch Plant Setup – Mobilization Limited to 10% of total cost
2. Installation of Traffic Control Devices/Signage and Barricades
3. Covering of existing airfield taxiway and runway signs

4. Erosion Control BMP installation

B. Civil Scope
1. Concrete and Asphalt Pavement, Earthwork and Storm Sewer System Removals
2. Storm Sewer/Drain Tile Construction, trench drain, and Storm Sewer Structure Construction
3. Pavement Construction
4. Pavement Markings
5. Seeding and Hydromulching
6. Disposal of Contaminated Soils and Materials
7. Contaminated groundwater which may require dewatering

C. Electrical Scope – as discussed by Burns & McDonnell staff
1. Removal of existing taxiway edge lighting and signage
2. Existing utilities – locate, flag, and protect existing utilities. Pull back, protect, and reconnect existing cable. Reconstruction required for designated utilities.
3. Installation of new lighting, signage, and circuitry.
4. Routing of new circuit homerun duct banks and installation of new handholes adjacent to existing circuit homerun duct bank. Temporary jumpers required for construction phasing. Existing circuit homerun duct bank to be demolished upon cutover of new homerun circuitry.
5. Detailed Schedule and Phasing Submittal Required
6. Conversion of airfield signage for existing Taxiway W pavement to "Taxiway A2" signage
7. Electrical vault work includes installation of (2) regulators
   a. 1 of the 2 regulators is included in the Alternate Bid construction
8. Note that there are some duplicate line items with different quantities in the bid form, this is intended to reflect the different funding source schedules (FAA eligible versus FAA ineligible (MN Air National Guard).

D. Restoration
1. Locations: disturbed areas, storage areas, haul roads
2. Restored to equal or better conditions

V. **Addendum Items**
A. Geotechnical Report – aiming to release the report via Addendum No. 1 on Tuesday, May 26.
B. Environmental Reports Addressing Management of PFAS contamination – aiming to release the reports via Addendum No. 1 on Tuesday, May 26.
1. PFAS observed in pondwater at north side pond dredging site. PFAS not observed at significant levels in the material to be dredged.
2. PFAS observed in soils in select areas of Taxiway A Reconstruction site.
3. No PFAS at significant levels observed at southeast stormwater pond expansion site.
4. PFAS observed in groundwater at Midfield Ramp Repair site.
   a. Contractor – Can treatment of contaminated dewatering be defined for biding purposes?
      (1) SEH – More information regarding requirements for this work will be provided via Addendum No. 1.
5. See Addendum No. 1 for final clarifications regarding contract requirements.

VI. **Questions/Comments**
A. Contractor – Is dredging of the north side stormwater pond expected to be performed in water or is the pond expected to be dewatered?
1. SEH – Dredging is expected to occur with wet conditions, due to the significant volume of pondwater. In general, expect to place dredged material on poly sheeting adjacent to the pond, so water can then drain back into the pond.

a. Is poly required?
   (1) See Addendum No. 1 regarding requirements for managing contaminated materials at project site.
b. Can dredged material be used on site or does it need to be land-filled?
   (1) See Addendum No. 1 regarding requirements for managing materials at project site.

B. SEH – Discussed how the two easterly doors of Hangar 104 can open and temporary fencing and poly sheeting will need to be installed to protect the interior of the hangar bays from dust and debris. The two westerly doors of Hangar 104 do not open as there is no longer a mechanism to do so; construction limits will be very close to the face of the building.
C. SEH – Discussed the separate bid form schedules that differentiate the funding sources (FAA eligible versus FAA ineligible). The Midfield Ramp Repair project is MnDOT funded.
D. DAA – Discussed the impact of ongoing construction of the Air Traffic Control Tower (ATCT) project adjacent to the Midfield Ramp Repair project. Based on the intended ATCT project schedule, it's anticipated that most of the ATCT work will be performed "inside" at the time of Midfield Ramp Repair construction, with limited ATCT hauling impact on Midfield Ramp Repair construction. Some contractor coordination will be required.
E. 60-hour Closure(s) – There is one (1) 60-hour weekend closure anticipated for the Base Bid work (Phase 7A-1), including 5 weekday nighttime closures to support construction within the Runway Safety Area. There is one (1) additional 60-hour closure anticipated (for Phase 7B-1), should the Alternate Bid work be awarded, not including any additional weekday nighttime closures. Work can be conducted in both Phase 7A-1 and Phase 7B-1 areas during both closures, should the contractor choose to do so.
F. DAA – Thanks to the contractors for their interest in bidding on this project and all of the previous work leading up to it. Looking forward to working with the contractor(s) on the project.

PRE-BID MEETING ATTENDANCE - TWY A PHASE 7 & MIDFIELD RAMP PHASE 4

1:30PM - Thursday May 21, 2026 - 3rd Floor Airport Conference Room and Teams Meeting

SECTION 02 60 10

HANDLING OF CONTAMINATED SOILS/DEBRIS

PART 1 GENERAL

1.01 SUMMARY

A. This section includes excavation, handling and disposal of contaminated soil, and debris that could be encountered during the Taxiway A Reconstruction, Phase 7 and Midfield Ramp Repair, Phase 4. Part 3.04 of this section addresses the potential need for dewatering contaminated water/groundwater that may be encountered for the Project. All contaminated material found on the Project shall be handled according to the following section. The Contractor shall comply with all applicable safety regulations imposed by federal and state law for handling pollutants, contaminants, or hazardous substances, wastes, or materials, including but not limited to 29 CFR PART 1910 and all subsequent revisions thereof.

B. The following is not included in this Section:
   1. Asbestos and heavy metals.
   2. Abrasives, additives, or coating chips generated from construction.

C. Related Sections:
   1. Section 02 41 33 – Removing Pavement and Miscellaneous Structures

D. Measurement:
   1. Contaminated soil removed from the site will be measured based on tonnage of material weighed and certified slips from Minnesota-permitted landfill chosen by the Contractor. The Contractor should identify a landfill that will accept all of the contaminants and concentrations that were identified in the Phase II Environmental Investigation.
   2. Dewatering will be a per lump sum cost therefore no measurements are required.
   3. There is no separate measurement for temporary fencing around contaminated materials.
   4. There is no separate measurement for materials needed to stockpile contaminated materials.

E. Payment:
   1. Costs related to encountering contaminated soils or debris during the Project, including possible additional excavation and resulting additional backfill, stockpiling, removing, and continuing on and beneath impervious structures or materials, as authorized by Engineer, shall be at the Contract Unit Price as shown on the bid form and paid by the tonnage of removed material. This includes anything beyond the estimated quantity as shown in the contract documents. The Contractor shall provide weight slips from disposal site to confirm payment.
   2. No adjustment in Contract time or price will be made for Work stoppage and securing of Site.
   3. <u>There is no separate payment or adjustment for temporary fencing around contaminated materials. This is incidental to the project.</u>
   4. <u>There is no separate payment or adjustment for materials, labor, equipment, etc needed to stockpile contaminated materials.</u>
   5. Dewatering will be a per lump sum cost as shown on bid form.

1.02 REFERENCES

A. MDH - Hazardous Waste Disposal Rule 7045

B. MPCA - LUST Consultant Guidance for Petroleum UST/AST Investigation and Cleanup

C. OSHA - Hazardous Waste Operations and Emergency Response 1910.120

1.03 QUALITY ASSURANCE

A. Health and Safety:
   1. Excavation and stockpiling of contaminated soils and debris is governed by OSHA Standard 1910.120.
   2. Comply with Minnesota Pollution Control regulations for soil storage and disposal.
   3. Comply with local, state, and federal regulations pertaining to handling of contaminated soils
   4. File a Site Safety Plan with Engineer for acknowledgement at or prior to preconstruction meeting.

B. Environmental Documentation
   1. A Phase I Environmental Site Assessment (ESA), Phase II Environmental Investigation, and Response Action Plan/Construction Contingency Plan (RAP/CCP) have been prepared for the Taxiway A Reconstruction – Phase 7 project (**Appendices G** through **I**, respectively). A Phase II Environmental Investigation has been prepared for the Midfield Ramp – Phase 4 project (**Appendix J**).

PART 2 PRODUCTS

2.01 MATERIALS

A. Reinforced Woven Polyethylene (PE) Sheeting:
   1. Tensile Strength: 60 lbf/in, per ASTM D7003.
   2. Thickness: 10 mil base, 10 mil cover.
   3. Impermeable, non-adsorbent, UV resistant, rot and mildew proof.
   4. Supplier: McMaster Carr 8552K36, or approved equal.

PART 3 EXECUTION

3.01 DESCRIPTION OF CONTAMINATED SOIL, GROUNWATER, SURFACE WATER, AND OTHER MATERIALS

A. Environmental investigations to determine the presence and magnitude of contaminated materials were completed at both Taxiway A Reconstruction – Phase 7 and the Midfield Ramp Repair – Phase 4 projects areas on April 20 and 21, 2026.

Taxiway A Reconstruction – Phase 7 - On the western extent of the Taxiway A area, perfluorodecanoic acid (PFDA) (up to 9.24 nanograms per gram [ng/g]) and perfluorooctanoic acid (PFOA) (4.34 ng/g) exceeded the MPCA Commercial/Industrial SRVs (ISRVs) in boring HA-01 at depths ranging from 1 to 3 feet below ground surface (bgs). Perfluorooctanesulfonic acid (PFOS) (up to 180 ng/g) and PFOA (0.366 ng/g) exceeded the MPCA Residential/Recreational SRVs (RSRVs) in borings HA-01 (at 1 and 3 feet bgs) and HA-02 (at 1 foot bgs). However, no exceedances were identified at 3 feet bgs in HA-02. All other PFAS analytes in HA-01, HA-02, and HA-03 were below their respective laboratory reporting limits (RLs). On the eastern extent of the Taxiway A area, PFOS (up to 27.4 ng/g) and PFOA (up to 1.24 ng/g) exceeded the MPCA RSRVs in borings HA-09 (at 1 and 3 feet bgs) and HA-07 (at 1 and 3 feet bgs). All other PFAS analytes in HA-06, HA-07, HA-08, and HA-09 were below their respective RLs. Soil encountered elsewhere during this Phase II Environmental Investigation met MPCA Unregulated Fill Criteria (UFC), SRVs, and Soil Leaching Value (SLVs).

Groundwater was not encountered during the Phase II Environmental Investigation. If dewatering is necessary, the CCP will be implemented.

Surface water located in the Northern Stormwater Pond contains PFAS contaminants above regulatory levels that will require proper management during dredging activities.

Midfield Ramp Repair – Phase 4 - No contaminants were detected in soil samples at concentrations exceeding the MPCA UFC.

A groundwater sample was collected from the nearby MW-12 on April 30, 2026. Depth to groundwater was measured to be 5.95 feet bgs at the time of the sample and the monitoring well was sealed. Various PFAS compounds were detected above their respective laboratory reporting limits but below their respective Environmental Protection Agency (EPA) Maximum Contaminant Levels (MCLs) and Minnesota Department of Health (MDH) Health Based Guidance (HBGs). However, National Pollutant Discharge Elimination System (NPDES) General Permit Limits (GPLs) prohibit the discharge of pollutants associated with emerging contaminants such as PFAS. If dewatering is necessary, water will need to be managed in accordance with all regulations prior to its discharge.

Soil that meets the Minnesota Pollution Control Agency (MPCA) definition of unregulated fill (https://www.pca.state.mn.us/sites/default/files/c-rem1-01.pdf) is not considered contaminated and may be re-used onsite.

Per MPCA's Best Management Practices for the Off-Site Reuse of Unregulated Fill dated March 2024 (see link above), Regulated Soil has the following characteristics:

- Contains solid waste, debris, or asbestos containing material or exhibits visual staining and chemical odors.
- Organic vapors above 10 parts per million (ppm), as measured by a PID;
- Greater than 100 milligrams per kilogram (mg/kg) diesel range organics (DRO)/gasoline range organics (GRO); or
- Contaminant concentrations greater than the MPCA's Residential/Recreational Soil Reference Values (RSRVs) and Screening Soil Leaching Values (SLVs). Naturally occurring concentrations of some metals, including arsenic, selenium or copper, can exceed SRVs or SLVs. Such soils are not considered impacted in the absence of a contaminant source or other field or laboratory indications of contamination.

Regulated soil that is petroleum-impacted and has PID readings between 10 and 200 ppm may be re-used on site in certain circumstances as outlined in the RAP/CCP and as directed by the Engineer. Excess Regulated Soil, if encountered, will be properly disposed at a Minnesota-permitted landfill.

B. A Phase I ESA, Phase II Environmental Investigation, and RAP/CCP have been prepared for the Taxiway A Reconstruction – Phase 7 project (**Appendices G** through **I**, respectively). A Phase II Environmental Investigation was prepared for the Midfield Ramp – Phase 4 project (**Appendix J**). The RAP/CCP was written to conform to these provisions.

3.02 EXCAVATION

A. Prior to the start of the project earthwork activities within the Taxiway A Reconstruction Area, delineation test pit excavations will be excavated at a radius of 25 feet, 50 feet, and 75 feet from previously completed sample locations HA-01, HA-02, HA-07, HA-09 to the north, south, east, and west, and from the southern project boundary (near sample location BGSL-11) to the northeast and northwest to a depth up to 5 feet (See **Appendix I** for additional detail regarding the test pit excavations).

The test pit excavation will be completed by the Contractor. The following table depicts the location of the previously completed sample locations that the test pit investigation will be completed from:

BORING ID	UTM Zone 15 N (meters)		NAD 1983 HARN Adj MN St. Louis South (US Feet)	
	Easting	Northing	Easting	Northing
HA-01	559423.173905	5187790.815921	557390.920042	169754.930666
HA-02	559525.524249	5187854.395694	557728.306591	169961.25678
HA-07	560058.614975	5187829.496995	559477.403271	169867.293716

The purpose of the test pit investigation is to collect representative soil samples for field screening and lab chemical analysis. The DAA's environmental consultant will be on-site collecting samples during the test pit excavations. Following the completion of each test pit excavation, soils will be placed back into the test pit at the interval from where it was generated. Sample lab analytical results will take a minimum of 10 business days, unless expedited analysis is approved by the Engineer and the lab has capacity to complete expedited analysis.

Project earthwork cannot be completed within the Taxiway A Reconstruction Area until the lab analytical results of the test pit investigation have been received and decisions regarding future delineation are made. Contractor's proposed schedule needs to accommodate laboratory turnaround time and potential waste profile amendment.

B. Environmental monitoring will be conducted during excavation in areas with previously identified impacts (See **Part 3.01**). Notify Engineer immediately and stop work in the vicinity if obvious contaminated soil or debris is encountered outside of the specific areas identified above.

C. The Contractor shall notify the Engineer no less than three (3) working days before planned excavation in areas with identified impacts. The Engineer will arrange for the Duluth Airport Authority's (DAA's) Environmental Consultant to be at the site to screen, observe, and document the excavation and removal of contaminated material. DAA's Environmental Consultant will determine if conditions encountered during excavation are consistent with the Contaminated Soil category for the excavation area.

If contaminated groundwater requires dewatering or if stormwater/snow melt comes in contact with contaminated soil and requires dewatering, the Contractor is responsible for obtaining and paying for all dewatering discharge permits for contaminated groundwater/surface water, permit incidental to the project Mobilization bid item or the Storm Sewer Construction Dewatering bid item. The Contractor shall submit the draft permit application(s) to the Engineer for review/comment prior to submitting to the regulator. DAA's Environmental Consultant will assist with providing previous sampling results, collecting additional samples as required by the permit(s) and can assist in completing permit-required discharge monitoring and reporting if approved by the Engineer. The Contractor shall submit reports as required by the regulator(s). (See **Part 3.04**).

The Contractor is responsible for all **02-60-10 Handling of Contaminated Soil-Debris** and landfill disposal approvals (See **Part 3.03**). The Contractor shall notify the Engineer at the Preconstruction Conference if additional laboratory analytical sampling is required by the Minnesota-permitted landfill(s) to accept the waste. The DAA's Environmental Consultant will be responsible for collecting and analyzing any additional laboratory samples required by the landfill. The Contractor should be aware that typical sample analytical turnaround time is ten (10) business days (Monday through Friday).

The Engineer must approve excavation of any soils beyond the Project limits of disturbance.

Imported fill soil must be demonstrated to be contaminant free in accordance with MPCA's requirements for Unregulated Fill to the satisfaction of the Owner and Engineer. The Contractor shall document the source and volume of fill soil and provide associated analytical testing results to the Engineer for review and acceptance a minimum of 10 working days prior to importing fill soil to the Project. For import sources that are determined to have no known or potential sources of contamination through environmental due diligence conducted by others, the Engineer may, after their review of the due diligence data, accept the import fill soil without associated analytical testing results. If the Engineer determines additional analytical data is required to characterize the import fill soil, the Contractor shall be responsible for collecting and chemically analyzing the additional samples at no cost to the Project.

D. Contaminated Soil Category Requirements. The Contractor shall handle soil that is generated from the areas of identified contamination (See **Part 3.01**) in accordance with the contaminated soil categories as specified below.

1. Unregulated Soil – meets the MPCA definition of unregulated fill summarized in **Part 3.01**. Unregulated soil will be managed as unrestricted reuse material both within the project Site, and potentially as excess material off-site at the discretion of the Contractor. Any soil that meets Unregulated Soil Criteria but is not geotechnically suitable for the project design requirements will become the property of the Contractor for unrestricted use off-site. MPCA Guidance Document c-rem1-01 (MPCA, 2024) *Best Management Practices for the Off-Site Reuse of Unregulated Fill* prohibits the placement of unregulated fill in sensitive areas and describes the following Best Management Practices*:*
   a. Avoid placing unregulated fill at schools, playgrounds, daycares, and residential properties. Unregulated fill is most suitable for use at industrial or commercial properties.
   b. Avoid placing unregulated fill in gardens where food for human/animal ingestion will be grown.
   c. Observe a minimum ten-foot separation distance between unregulated fill and the water table.
   d. Avoid placing unregulated fill where contaminants may be transported by run-off to lakes, rivers, wetlands, or streams.

2. Regulated Soil – The Contractor may reuse Regulated Soil on-site under certain circumstances (see RAP). Excess Regulated Soil excavated for the project shall be disposed of at a Minnesota-permitted landfill.
3. Industrial Exceedance Soil - Industrial Exceedance Soil will be managed as contaminated material and will be disposed of at a Minnesota-permitted landfill. Industrial Exceedance Soil is prohibited from reuse on or off the project Site.
4. Undesignated Soil - The Contractor shall be prepared to temporarily stockpile soil for additional testing if field screening results indicate that different contaminants than those identified during previous environmental investigations are potentially present. The Contractor shall be prepared to manage Undesignated Soil in accordance with Regulated Soil or Industrial Exceedance Soil requirements if the DAA's Environmental Consultant or Engineer determines that the Undesignated Soil is contaminated (e.g., based on elevated field screening results, laboratory analytical results, debris, etc.).

3.03 CONTAMINATED SOIL AND MATERIAL HANDLING, STORAGE, AND DISPOSAL

A. Contaminated Soil and Material Approval and Documentation Requirements

The Contractor shall select a Minnesota-permitted landfill for disposal of Contaminated Soil and Material. The Contractor is responsible for obtaining landfill approval to accept material. The Contractor shall complete the following documentation for landfill approval and disposal tracking:

1. Complete a waste profile form provided by the landfill.
2. Submit the completed waste profile form to the Engineer and DAA's Environmental Consultant for review and signature.
3. Submit the signed waste profile form and analytical data to the landfill.
4. Receive written approval from the landfill (e-mail is acceptable) and submit the approval to the Engineer and DAA's Environmental Consultant before hauling material to the landfill(s).
5. Provide copies of manifests to the Engineer before hauling material to the landfill(s) and arrange with the Engineer for DAA or a DAA authorized representative to be available to sign contaminated soil manifests as trucks leave the Project.
6. Submit copies of landfill scale tickets and corresponding manifests for each load hauled to the landfill(s) to the Engineer daily during hauling.

B. Contaminated Soil Excavation and Removal of Contaminated Materials

The Contractor shall allow the DAA's Environmental Consultant access to all Project areas to observe and field screen soil during excavation.

The Contractor shall be prepared to segregate contaminated and potentially contaminated material for additional field screening and analytical testing as directed by the DAA's Environmental Consultant. The DAA's Environmental Consultant will perform any additional testing and analysis. The Contractor shall be prepared to dig test pits as directed by the Engineer in order for the DAA's Environmental

Consultant to access soil to collect samples for analysis. If the DAA's Environmental Consultant determines for any reason that excavated material cannot be directed for reuse or disposal, the Contractor shall temporarily stockpile the material.

The Contractor shall manage open excavation areas to prevent to the extent possible, the flow of rainwater/snow melt runoff into the excavation or the flow of contaminated groundwater out of the excavation. Water that comes into contact with contaminated soil is considered contaminated. The Contractor shall manage water run-off and run-on (for example: minimize the drainage area around the excavation, place berms up gradient of the excavation to divert runoff and/or cover the excavation). If water needs to be removed from the excavation, the Contractor shall use procedures described in **Part 3.04-Contaminated Groundwater Handling, Storage and Disposal**.

Additional considerations should be made for the stockpiling of saturated soil (See **Part 3.03.C.5**).

C. Stockpiling of Contaminated Material

If excavated Contaminated Soil or debris cannot be directly hauled to the landfill, the Contractor shall temporarily stockpile the material.

1. Engineer shall approve all stockpile location(s).
2. The Contractor shall place contaminated soil from separate contaminated areas (as determined by the DAA's Environmental Consultant) into separate stockpiles.
3. The Contractor shall stockpile the contaminated soil on minimum 10- mil reinforced plastic and cover the stockpile with minimum 10-mil reinforced plastic. The stockpile cover will be securely anchored. Every stockpile will be covered as soon as work on the stockpile has been completed during the day, or at a minimum at the end of the working day. The stockpile will be constructed to protect the stockpile/containment area from the flow of rainwater into the stockpile or the flow of contaminated water out of the stockpile/containment area.
4. The Contractor shall surround the stockpile with temporary fencing if the DAA's Environmental Consultant determines that additional security measures are necessary. The Contractor shall be responsible for the maintenance of the stockpile cover (and fencing if installed) for the duration of the Contract or until all contaminated materials are removed. The Contractor shall inspect the stockpile a minimum of once per week and document the stockpile(s) condition on a weekly tracking form that the Contractor shall provide to the Engineer each week.
5. The Contractor shall construct saturated soil stockpiles to either contain free liquids or drain free liquids back into the excavation/dredging area from which the soil was generated. The Contractor shall implement best management practices sufficient to restrict excess water generated by the excavation/dredging activities to prevent an unauthorized release. All water generated during excavation/dredging shall be managed in an appropriate manner that prevents infiltration to the ground surface or discharge to infrastructure.

   The Contractor shall manage the stockpiles so that soil sufficiently dries to pass the paint filter test. The Contractor shall collect free liquids for disposal in accordance with **02 60 10 Contaminated Groundwater Handling, Storage and Disposal**. Alternatively, the Engineer may approve mixing saturated contaminated soil with dry contaminated soils or light weight amendments so that the soil passes the paint filter test.

   If the Contractor elects to move a secured stockpile for any reason, the cost of moving and re-stockpiling the soil shall be incidental.

D. Contaminated Soil and Other Material Disposal

The Contractor shall haul Contaminated Soil removed for the project to a Minnesota-permitted landfill for use by the landfill as daily cover if the soil meets the landfill's daily cover criteria, or for disposal in a cell by the landfill if the material does not meet daily cover criteria.

1. The Contractor shall cover (tarp) loads of contaminated soil while in transit.
2. The Contractor shall not haul soil that contains free liquids to the landfill(s).
3. The Contractor shall minimize track out of contaminated soil from the project. Track out from contaminated soil areas will be treated as contaminated soil.

E. Contaminated Soil Contingency Plan

The Contractor shall follow the procedure outlined in Construction Contingency Plan (CCP) contained in the RAP/CCP (**Appendix I**) in the event on-site observations indicate contaminated materials or contaminated soil as listed in CCP are unexpectedly encountered.

After the Engineer and DAA's Environmental Consultant have approved work to resume in the unexpected, contaminated area, the Contractor shall complete work in accordance with **02 60 10 Contaminated Soil Handling, Storage, and Disposal** or as directed by the Engineer.

3.04 CONTAMINATED GROUNDWATER HANDLING, STORAGE, AND DISPOSAL

A. If groundwater dewatering is necessary or surface water or snow melt comes in contact with Contaminated Soil and requires removal, the Contractor shall be responsible for obtaining and paying for all necessary permits incidental to mobilization bid item and completing required documentation reports for discharge of contaminated groundwater. The Contractor shall submit the permit application(s) to the Engineer for review and approval before submitting the application(s) to the permitting authority. A minimum of 5 working days shall be allowed for the review.

B. Groundwater or impacted stormwater removed by the Contractor from within the Project limits of disturbance shall be discharged to the sanitary sewer under a sanitary permit and/or to the storm sewer under a National Pollutant Discharge Elimination System/State Disposal System Industrial (Contaminated Groundwater) Pump-Out Permit. Groundwater containing excess contaminant concentrations as determined by the permitting authority shall not be directly discharged to the storm and/or sanitary sewer.

C. The Contractor shall notify the Engineer no less than three (3) working days prior to beginning Project dewatering.

D. The DAA's Environmental Consultant will complete necessary sampling and testing of the dewatered groundwater as required by the permitting authority for discharge. The Contractor shall provide DAA's Environmental Consultant reasonable access to the effluent discharge sampling port.

E. The Contractor shall measure and document the rate of water discharge during dewatering via a water meter. The Contractor shall record the rate of discharge daily and shall submit a discharge report to the Engineer weekly.

F. The Contractor shall complete and submit discharge monitoring reports required by the permit(s) to the Engineer for review and acceptance prior to submitting to permitting authority(s). A minimum of 5 working days shall be allowed for the review.

G. In the event contaminant concentrations in a discharge sample exceed permit limits, the Contractor shall immediately stop discharging. The Contractor shall not re-start discharging until a groundwater treatment system has been designed and implemented to sufficiently treat the contaminated groundwater to meet permit limits and after the Engineer has given approval to restart dewatering.

H. The Contractor shall be prepared to treat contaminated groundwater prior to discharge with a portable groundwater treatment system designed by a Minnesota Professional Engineer if contaminant concentrations are determined to exceed permit limits. Treatment of the contaminated groundwater with a portable groundwater treatment system will include but not limited to the groundwater treatment equipment, equipment mobilization and demobilization, equipment installation, equipment operation and maintenance, and disposal. The portable groundwater treatment system shall have a treatment capacity equal to or greater than the rate of temporary construction dewatering. The groundwater treatment system shall include an effluent discharge sampling port. The Contractor shall provide a minimum of one on-site operator at all times during operation of the groundwater treatment system. The on-site operator shall be trained and experienced in operating and maintaining the groundwater treatment system and shall be responsible for maintaining the system in proper working order.

Re: Geotechnical Evaluation Rev. 1
DLH Taxiway A Phase 7
4701 Grinden Drive
Duluth, Minnesota

Dear Mr. Nelson:

We are pleased to present this geotechnical evaluation report for the proposed Phase 7 reconstruction of Taxiway A at Duluth International Airport in Duluth, Minnesota.

Thank you for making Braun Intertec Corporation (Braun Intertec) your geotechnical consultant for this project. If you have questions about this report, or if there are other services that we can provide in support of our work to date, please contact Steve Thayer at 320.980.3187 or sthayer@braunintertec.com.

Sincerely,
Braun Intertec Corporation

Steven A. Thayer, PE
Senior Manager, Senior Engineer

Joseph C. Butler, PE
Director, Senior Engineer

1.0 Introduction

1.1 Project Description

This geotechnical evaluation report addresses the proposed design and construction for Phase 7 of Taxiway A reconstruction at Duluth International Airport in Duluth, Minnesota. The project will include reconstructing the western 2,100 feet of Taxiway A. Reconstruction will include realignment of Taxiway A1 and Taxiway A2.

Based on conversations with Short Elliott Hendrickson, Inc. (SEH), we understand the desired new pavement section will be similar to the pavement sections include in previous phases of the Taxiway A project; they will consist of Cement Concrete Pavement (FAA P-501), underlain by Asphalt Mix Pavement (FAA P-401, FAA P-403, or MnDOT 2360), underlain by Crushed Aggregate Base Course (P-209), underlain by Granular Subbase (P-154).

We anticipate design elevations will be similar to the adjacent pavement elevations. We anticipate fills to meet design grades in the turf areas will be up to 4 feet. We have assumed design and construction will be in accordance with Federal Aviation Association (FAA) design and construction standards for aircrafts greater than 100,000 pounds.

The figure below shows an illustration of the proposed site layout.

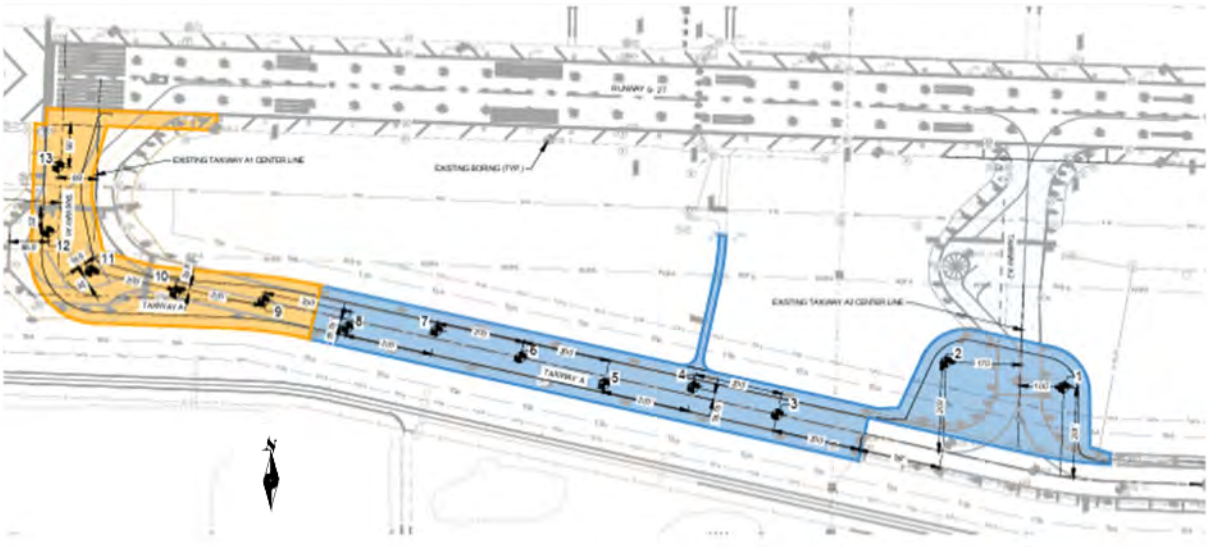

Figure 1-1. Site Layout
Figure provided by SEH dated January 2026.

1.2 Site Conditions and History

Pavement condition index (PCI) data available from ARA, Inc. shows that the pavement surface of the Phase 6 area in December of 2024 was generally considered to be very good (PCI value of 78 to 83). The primary distress types noted in the bituminous pavements included longitudinal and transverse cracking. Taxiway A1 was considered to be fair (PCI value of 41 to 55). Figure 2 below shows an illustration of the PCI rating of each pavement feature at the Duluth International Airport at the time of the survey.

Figure 1-2. PCI Rating Summary
Figure provided by Applied Research Associates, Inc. (ARRA), dated December 2024.

1.3 Purpose

The purpose of our geotechnical evaluation is to characterize subsurface geologic conditions at selected exploration locations, evaluate their impact on the project, and provide geotechnical recommendations for the design and reconstruction of the taxiway and adjacent connector taxiways.

1.4 Background Information and Reference Documents

We reviewed the following information:

- Soil Boring Figure 1, provided by SEH and dated January 2026.
- Advisory Circular 150/5320-6G, Airport Pavement Desing and Evaluation, Federal Aviation Administration, June 7, 2021 (FAA AC/150).
- Pavement Condition Report prepared by ARRA dated December 2024.
- Communications with Jarrod Nelson, PE, SEH, regarding the scope of the proposed project.

In addition to the provided sources, we have used several publicly available sources of information.

We have described our understanding of the proposed construction and site to the extent others reported it to us. Depending on the extent of available information, we may have made assumptions based on our experience with similar projects. If we have not correctly recorded or interpreted the project details, the project team should notify us. New or changed information could require additional evaluation, analyses, and/or recommendations.

1.5 Scope of Services

We performed our scope of services for the project in accordance with our Proposal to Mr. Nelson dated May 15, 2025. The following list describes the geotechnical tasks completed in accordance with our authorized scope of services.

- Reviewing the background information and reference documents previously cited.
- Clearing the exploration location of underground utilities. SEH selected and we staked the exploration locations. The Soil Boring Location Sketch included in the Appendix shows the approximate locations of the borings.
- Performing 15 standard penetration test (SPT) borings, to nominal depths of 10 to 30 feet.
- Performing laboratory testing on select samples to aid in soil classification and engineering analysis.
- Preparing this report containing a boring location sketch, logs of soil borings, a summary of the soils encountered, results of laboratory tests, and recommendations for pavement subgrade preparation.

Prior to completing the borings, SEH requested one additional boring and reduced the 30-foot borings to 15 feet. Thus, three borings were completed in a proposed pond area. These borings were labeled PE, PS and PW. The pond project has since been cancelled, and no analyses or recommendations are provided for these borings.

Our scope of services did not include environmental services or testing and our geotechnical personnel performing this evaluation are not trained to provide environmental services or testing. We can provide environmental services or testing at your request.

2.0 Results

2.1 Geologic Overview

We based the geologic origins used in this report on the soil types, in-situ and laboratory testing, and available common knowledge of the geological history of the site. Because of the complex depositional history, geologic origins can be difficult to ascertain. We did not perform a detailed investigation of the geologic history for the site.

2.2 Pavement Core Results

Cores were completed within the pavements at 9 of the boring locations. The table below provides a summary of the pavement thicknesses.

Boring/Core Number	Bituminous Thickness (inches)	Concrete Thickness (inches)
3	15	--
4	16.5	--
6	13	--
7	14.5	--
8	13	--
10	16	--
11	--	15.5
12	--	14.5
13	--	9.5

Representative pictures of the bituminous and concrete pavements are provided in the table below.

Boring/Core Location 4	Boring/Core Location 11

2.3 Boring Results

Table 2-1 provides a summary of the soil boring results, in the general order we encountered the strata. Please refer to the Log of Boring sheets in the Appendix for additional details. The Descriptive Terminology sheets in the Appendix include definitions of abbreviations used in the table below.

Table 2-1. Subsurface Profile Summary*

Strata	Soil Type -ASTM Classification	Range of Penetration Resistances	Commentary and Details
Pavement Section			▪ Overall thicknesses range from 22 to 40 inches. ▪ Bituminous thickness ranged from 13 to 16 inches. ▪ Apparent aggregate base[1] ranged from 9 to 24 inches. ▪ Concrete thickness ranged from 9 1/2 to 15 1/2.
Topsoil fill	SM		▪ Predominantly SM. ▪ Dark brown to black. ▪ Encountered in Borings 1 and 2. ▪ Thickness was about 1/2 foot. ▪ Moisture condition generally moist.

Strata	Soil Type -ASTM Classification	Range of Penetration Resistances	Commentary and Details
Fill[2]	SP-SM, SM		▪ Encountered in all of the borings. ▪ Extended to depths ranging from 4 to 9 feet. ▪ Moisture content generally moist to wet.
Swamp deposits	PT	2 to 9 BPF	▪ Encountered in Borings 2, 5, 7 and 8, below the fill soils at depths ranging from 9 to 10 feet. ▪ Peat extended to depths ranging from 13 to 17 feet.
Glacial deposits	SP, SM, ML	2 to 70 BPF	▪ Mostly consisted of SM or ML. Soils were generally loose, except in Borings 11, 12 and 13, where they were dense to very dense. ▪ Variable amounts of gravel; may contain cobbles and boulders. ▪ Moisture condition generally moist or wet.

*Abbreviations are defined in the attached Descriptive Terminology sheets.
[1]We did not perform gradation analysis on the apparent aggregate base material encountered as part of the pavement section, in accordance with our scope of work. Therefore, we cannot conclusively determine if the encountered material satisfies a particular specification, and it should not be assumed it is suitable for reuse.
[2]For simplicity in this report, we define existing fill to mean existing, uncontrolled, or undocumented fill.

Boring nine encountered auger refusal at a depth of about 3 feet. Refusal occurs when the auger cannot be further advanced without potential of equipment breaking. Refusal can be caused by cobbles, boulders, bedrock, or very dense soils. In this case, we suspect the refusal was caused by a cobble or boulder. Coring is needed to positively identify the cause.

2.4 Groundwater

Table 2-2 summarizes the depths where we observed groundwater; the attached Log of Boring sheets in the Appendix also include this information and additional details.

Table 2-2. Groundwater Summary

Location	Surface Elevation	Measured Depth to Groundwater (ft)	Corresponding Groundwater Elevation (ft)
1	1415.6	Not observed	Not observed
2	1415.0	Not observed*	Not observed*
3	1419.6	10	1409 1/2
4	1419.4	10	1409 1/2
5	1419.4	10	1409 1/2
6	1419.7	7 1/2	1412
7	1419.5	7 1/2	1412

Location	Surface Elevation	Measured Depth to Groundwater (ft)	Corresponding Groundwater Elevation (ft)
8	1419.8	7 1/2	1412
9	1420.9	Not observed	Not observed
10	1421.9	7 1/2	1414 1/2
11	1423.5	Not observed	Not observed
12	1423.4	Not observed	Not observed
13	1425.7	Not observed	Not observed

*Groundwater was not observed in Boring 2, however, we expect in an open hole or excavation, groundwater is likely near or above the organic soil layers at 9 feet, elevation 1406.

Seasonal and annual fluctuations of the groundwater level should be anticipated.

2.5 Laboratory Test Results

The boring logs show the results of moisture content and percent-passing-200-seive testing we performed, next to the tested sample depth. We also performed modified Proctor and California Bearing Ratio (CBR) testing. The Appendix contains the results of these tests.

Table 2-3 presents the results of our laboratory tests.

Table 2-3. Laboratory Classification Test Results

Location	Sample Depth (ft)	Classifications	Moisture Content (w, %)	Percent Passing a #200 Sieve	Maximum Modified Proctor Density	Optimum Moisture	CBR
4	5	SPSM	5	12	--	--	--
4	3 to 6	SM	--	14	139.2	7.0	82.3
5	3	SPSM	14	10	--	--	--
6	5	SPSM	4	9	--	--	--
7	3	SM	5	16	--	--	--
7	3 to 6	SM	--	17	144.7	5.5	27.6
7	10	PT	166	--	--	--	--
11	3	SM	4	22	--	--	--
11	5	SM	8	49	--	--	--
12	3 to 6	SM	--	39	142.8	7.1	17.9
13	3	SM	5	33	--	--	--
13	5	SM	6	37	--	--	--

3.0 Recommendations

3.1 Design and Construction Discussion

3.1.1 Frost Protection

The subgrade soils at the site are considered frost susceptible. Based on the FAA Advisory Circular 150/5320-6G, Table 2-2. Soil Frost Groups, the subgrade soils are classified in Frost Groups FG-3 and FG-4. The FAA recommends that frost protection be handled in one of three ways: 1) the complete frost protection method, 2) the limited subgrade frost penetration or 3) reduced subgrade strength method. The complete frost protection method requires removal of all frost-susceptible soil down to the frost penetration depth. The limited subgrade frost penetration method allows frost to penetrate a limited amount into the underlying frost susceptible soils. Typically, thickness of the non-frost susceptible soils is 65 percent of the extreme frost penetration depth. The reduced subgrade strength method uses a reduced CBR value to account for the frost melting period when the subgrade soils are weakest.

Based on the design CBR value of the in-place materials of 14.2 percent and the frost susceptibility of the existing soils, we recommend matching the adjacent pavements with the limited subgrade frost penetration method to mitigate frost heave. Using an anticipated frost depth of 60 inches, pavement design should incorporate a non-frost susceptible section of 39 inches.

3.1.2 Organic Soils

Borings two, five, seven and eight encountered peat and organic silt buried below 9 to 10 feet of existing fill soils. Organic soils are generally wet, soft and compressible when load is applied. Compression of these soils can lead to uneven settlement and resulting pavement surfaces. Minimizing risk of future settlement would require removing the existing organic soils, resulting in excavations 13 to 17 feet deep.

At this site, it is likely the peat has stabilized compression from the load of the existing fill and pavements applied many years ago. Grade will not be raised in the areas of Borings five, seven and eight, thereby not increasing the load on the soil. Grades in the area of Boring two, however, will be raised by 4 feet. We anticipate the grade raise in the area of Boring 2 will result in up to 1 foot of compression (settlement).

Based on these results and past projects at the airport, we recommend the following be considered.

- Borings five, seven and eight: Since no grade change is planned, we do not anticipate noticeable settlement in these areas after the construction is complete. Also, since the organic soils are buried 9 feet deep, we do not anticipate they will significantly affect the proposed construction. We recommend these soils be left in place. Care should be taken not to subcut more than the planned 39 inch pavement section and equipment should be limited to low ground pressure machine to minimize disturbance of the soils. We also recommend consideration be given to including a geogrid between the P-154 layer and the P-209 layer in these areas to further distribute loads above the organic soils.

- Boring two, there are generally two options around this location since this will be a new pavement area. The options are described below.

  - Option 1. Completely remove the peat from below the pavement and oversize area. This option provides the least amount of risk for long-term settlement. Care should be taken not to undermine the existing pavements by providing a slope of at least 1 1/2 horizontal to 1 vertical down and out from the top edge of the pavement, unless special excavation/backfill techniques are used to protect the pavement. The excavation should be backfilled as recommended below with granular soils.

  - Option 2. Complete the grading as described below, to at least top of pavement grade. After grading is complete, we recommend waiting at least 2 months prior to paving, to allow some of the consolidation to occur within the peat layer. Several monitoring points should be periodically surveyed to determine the rate and amount of settlement occurring. These measurements (total settlement and rate) should be considered prior to final paving.

3.2 Site Grading and Subgrade Preparation

3.2.1 Pavement Excavations

We recommend completely removing all surficial topsoil fill, topsoil and bituminous and concrete pavement from the proposed pavement areas. Based on the borings, we anticipate removals of the pavements will likely extend 10 to 28 inches in the pavement areas, and 3 to 6 inches in the grass surfaced areas. Additional removals will be needed for frost penetration as discussed in Section C.1.a.

After completion of the removals, we recommend scarifying (thoroughly mixing/disking) the resulting subgrades to a depth of at least 1/2-foot, moisture conditioning, and recompacting the subgrade prior to placing additional fill and pavement materials.

3.2.2 Engineered Fill Materials and Compaction

Table 3-1 below contains our recommendations for engineered fill materials.

Table 3-1. Engineered Fill Materials*

Locations To Be Used	Engineered Fill Classification	Possible Soil Type Descriptions	Gradation	Additional Requirements
▪ Embankment fill below 39 inches	FAA P-152	SP, SP-SM, SM	100% passing 2-inch sieve	< 2% Organic Content (OC)
▪ Subbase Course ▪ Nonfrost-susceptible	FAA P-154	GP, GW, SP, SW, SP-SM, SW-SM	100% passing 1-inch sieve < 60% passing #40 sieve < 10% passing #200 sieve	< 2% OC
Below landscaped surfaces, where subsidence is not a concern	Non-structural fill	All	100% passing 6-inch sieve	< 10% OC

* More select soils comprised of coarse sands with < 5% passing #200 sieve may be needed to accommodate work occurring in periods of wet or freezing weather.

We recommend spreading engineered fill in loose lifts of approximately 8 to 12 inches thick. We recommend compacting engineered fill in accordance with the criteria presented below in Table 3-2. The project documents should specify relative compaction of engineered fill, based on the structure located above the engineered fill, and vertical proximity to that structure.

Table 3-2. Compaction Recommendations Summary

Reference	Relative Compaction, percent (ASTM D1557 – Modified Proctor)	Moisture Content Variance from Optimum, percentage points
Cohesive Subgrade/Embankment (P-152) (Below 39 inches)	95	±2
Non-cohesive Subgrade/Embankment (P-152) (Below 39 inches)	100	±2
Subbase Course (P-154) (Upper 39 inches)	100	±2
Below landscaped surfaces	90	±5

The project documents should not allow the contractor to use frozen material as engineered fill or to place engineered fill on frozen material. Frost should not penetrate under foundations during construction.

We recommend performing density tests in engineered fill to evaluate if the contractors are effectively compacting the soil and meeting project requirements.

3.2.3 Pavement Subgrade Proofroll

After preparing the subgrade as described above and prior to the placement of the aggregate base, we recommend proofrolling the subgrade soils as required by Specification P-152. We also recommend having a geotechnical representative observe the proofroll. Areas that fail the proofroll likely indicate soft or weak areas that will require additional soil correction work to support pavements.

The contractor should correct areas that display excessive yielding or rutting during the proofroll, as determined by the geotechnical representative. Possible options for subgrade correction include moisture conditioning and recompaction, subcutting and replacement with soil or crushed aggregate, chemical stabilization, and/or geotextiles. We recommend performing a second proofroll after the aggregate base material is in place, and prior to placing bituminous or concrete pavement.

3.3 Pavements

3.3.1 Subgrade Stiffness Values

The average CBR value was calculated as 42.6 percent, and the standard deviation was calculated as 28.4. Therefore, based on FAA guidance for determining the design CBR using a value that is one standard deviation below the mean, it would be reasonable to design the pavement using a CBR of 14.2 percent.

This CBR value correlates to a modulus of subgrade reaction value (k) of 225 pci using the following correlation provided in FAA Advisory Circular 150/5320-6G section 3.16.4.1.

$k\ (pci) = 28.6926 \times CBR^{0.7788}$

3.3.2 Materials and Compaction

We recommend specifying crushed aggregate base meeting Federal Aviation Administration (FAA) Standard for Specifying Construction of Airports: Item P-209 Crushed Aggregate Base Course. Furthermore, we recommend specifying that the bituminous and concrete pavement meet either Federal Aviation Administration (FAA) Standard for Specifying Construction of Airports: Item P-401 or P-403 Asphalt Mix Pavement and Item P-501 Cement Concrete Pavement.

We recommend compacting crushed aggregate base and granular subbase placed within 3 feet of pavement subgrade elevations to at least 100 percent of their maximum modified Proctor dry densities (ASTM D1557).

3.3.3 Subgrade Drainage

We recommend that a subsurface drainage system be installed in order to reduce the amount of water in the frost zone. The drainage system should include a drainage pipe along each side of the excavation with an outlet at the lowest elevation to allow the water to be drained away from the pavement subgrade.

3.3.4 Performance and Maintenance

Many conditions affect the overall performance of the exterior slabs and pavements. Some of these conditions include the environment, loading conditions and the level of ongoing maintenance. With regard to bituminous pavements in particular, it is common to have thermal cracking develop within the first few years of placement and continue throughout the life of the pavement. We recommend developing a regular maintenance plan for filling cracks in exterior slabs and pavements to lessen the potential impacts for cold weather distress due to frost heave or warm weather distress due to wetting and softening of the subgrade.

4.0 Procedures

4.1 Pavement Cores

We obtained core samples of the pavement using a truck-mounted coring machine advancing a 6-inch diameter core barrel. After completing the boring at the core location, we repaired the pavement with a cold-mix bituminous patch. We measured the cores to obtain approximate pavement thickness and noted their material conditions based on visual observation.

4.2 Penetration Test Borings

We drilled the penetration test borings with truck and all-terrain-mounted core and auger drill equipped with hollow-stem auger. We performed the borings in general accordance with ASTM D6151 taking penetration test samples at 2 1/2- or 5-foot intervals in general accordance with ASTM D1586. The boring logs show the actual sample intervals and corresponding depths. We also collected bulk samples of auger cuttings at selected locations for laboratory testing.

We sealed penetration test boreholes meeting the Minnesota Department of Health (MDH) Environmental Borehole criteria with an MDH-approved grout.

4.3 Exploration Logs

4.3.1 Log of Boring Sheets

The Appendix includes Log of Boring sheets for our penetration test borings. The logs identify and describe the penetrated geologic materials and present the results of penetration resistance and other in-situ tests performed. The logs also present the results of organic vapor screening, laboratory tests performed on penetration test samples, and groundwater measurements.

We inferred strata boundaries from changes in the penetration test samples and the auger cuttings. Because we did not perform continuous sampling, the strata boundary depths are only approximate. The boundary depths likely vary away from the boring locations, and the boundaries themselves may occur as gradual rather than abrupt transitions.

4.3.2 Geologic Origins

We assigned geologic origins to the materials shown on the logs and referenced within this report, based on: (1) a review of the background information and reference documents cited above, (2) visual classification of the various geologic material samples retrieved during the course of our subsurface exploration, (3) penetration resistance and other in-situ testing performed for the project, (4) laboratory test results, and (5) available common knowledge of the geologic processes and environments that have impacted the site and surrounding area in the past .

4.4 Material Classification and Testing

4.4.1 Visual and Manual Classification

We visually and manually classified the geologic materials encountered based on ASTM D2488. When we performed laboratory classification tests, we used the results to classify the geologic materials in accordance with ASTM D2487. The Appendix includes a chart explaining the classification system we used.

4.4.2 Laboratory Testing

The exploration logs in the Appendix note most of the results of the laboratory tests performed on geologic material samples. The remaining laboratory test results follow the exploration logs. We performed the tests in general accordance with ASTM procedures.

4.5 Groundwater Measurements

The drillers checked for groundwater while advancing the penetration test borings, and again after auger withdrawal. We then filled the boreholes as noted on the boring logs.

5.0 Qualifications

5.1 Variations in Subsurface Conditions

5.1.1 Material Strata

We developed our evaluation, analyses, and recommendations from a limited amount of site and subsurface information. It is not standard engineering practice to retrieve material samples from exploration locations continuously with depth. Therefore, we must infer strata boundaries and thicknesses to some extent. Strata boundaries may also be gradual transitions, and project planning should expect the strata to vary in depth, elevation, and thickness, away from the exploration locations.

Variations in subsurface conditions present between exploration locations may not be revealed until performing additional exploration work or starting construction. If future activity for this project reveals any such variations, you should notify us so that we may reevaluate our recommendations. Such variations could increase construction costs, and we recommend including a contingency to accommodate them.

5.1.2 Groundwater Levels

We made groundwater measurements under the conditions reported herein and shown on the exploration logs and interpreted in the text of this report. Note that the observation periods were relatively short, and project planning can expect groundwater levels to fluctuate in response to rainfall, flooding, irrigation, seasonal freezing and thawing, surface drainage modifications and other seasonal and annual factors.

5.2 Continuity of Professional Responsibility

5.2.1 Plan Review

We based this report on a limited amount of information, and we made a number of assumptions to help us develop our recommendations. We should be retained to review the geotechnical aspects of the designs and specifications. This review will allow us to evaluate whether we anticipated the design correctly, if any design changes affect the validity of our recommendations, and if the design and specifications correctly interpret and implement our recommendations.

5.2.2 Construction Observations and Testing

We recommend retaining us to perform the required observations and testing during construction as part of the ongoing geotechnical evaluation. This will allow us to correlate the subsurface conditions exposed during construction with those encountered by the borings and provide professional continuity from the design phase to the construction phase. If we do not perform observations and testing during construction, it becomes the responsibility of others to validate the assumption made during the preparation of this report and to accept the construction-related geotechnical engineer-of-record responsibilities.

5.3 Use of Report

This report is for the exclusive use of the addressed parties. Without written approval, we assume no responsibility to other parties regarding this report. Our evaluation, analyses and recommendations may not be appropriate for other parties or projects.

5.4 Standard of Care

In performing its services, Braun Intertec used that degree of care and skill ordinarily exercised under similar circumstances by reputable members of its profession currently practicing in the same locality. No warranty, express or implied, is made.

Descriptive Terminology of Soil

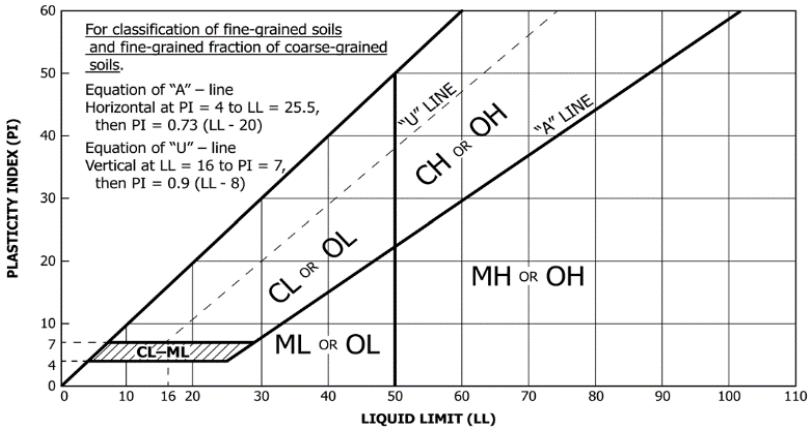
Based on Standards ASTM D2487/2488
(Unified Soil Classification System)

Criteria for Assigning Group Symbols and Group Names Using Laboratory Tests[A]				Soil Classification	
				Group Symbol	Group Name[B]
Coarse-grained Soils (more than 50% retained on No. 200 sieve)	Gravels (More than 50% of coarse fraction retained on No. 4 sieve)	Clean Gravels (Less than 5% fines[C])	$C_u \geq 4$ and $1 \leq C_c \leq 3^D$	GW	Well-graded gravel[E]
			$C_u < 4$ and/or ($C_c < 1$ or $C_c > 3$)[D]	GP	Poorly graded gravel[E]
		Gravels with Fines (More than 12% fines[C])	Fines classify as ML or MH	GM	Silty gravel[E F G]
			Fines Classify as CL or CH	GC	Clayey gravel[E F G]
	Sands (50% or more coarse fraction passes No. 4 sieve)	Clean Sands (Less than 5% fines[H])	$C_u \geq 6$ and $1 \leq C_c \leq 3^D$	SW	Well-graded sand[I]
			$C_u < 6$ and/or ($C_c < 1$ or $C_c > 3$)[D]	SP	Poorly graded sand[I]
		Sands with Fines (More than 12% fines[H])	Fines classify as ML or MH	SM	Silty sand[F G I]
			Fines classify as CL or CH	SC	Clayey sand[F G I]
Fine-grained Soils (50% or more passes the No. 200 sieve)	Silts and Clays (Liquid limit less than 50)	Inorganic	PI > 7 and plots on or above "A" line[J]	CL	Lean clay[K L M]
			PI < 4 or plots below "A" line[J]	ML	Silt[K L M]
		Organic	Liquid Limit – oven dried / Liquid Limit – not dried <0.75	OL	Organic clay[K L M N] / Organic silt[K L M O]
	Silts and Clays (Liquid limit 50 or more)	Inorganic	PI plots on or above "A" line	CH	Fat clay[K L M]
			PI plots below "A" line	MH	Elastic silt[K L M]
		Organic	Liquid Limit – oven dried / Liquid Limit – not dried <0.75	OH	Organic clay[K L M P] / Organic silt[K L M Q]
Highly Organic Soils		Primarily organic matter, dark in color, and organic odor		PT	Peat

A. Based on the material passing the 3-inch (75-mm) sieve.
B. If field sample contained cobbles or boulders, or both, add "with cobbles or boulders, or both" to group name.
C. Gravels with 5 to 12% fines require dual symbols:
   GW-GM well-graded gravel with silt
   GW-GC well-graded gravel with clay
   GP-GM poorly graded gravel with silt
   GP-GC poorly graded gravel with clay
D. $C_u = D_{60} / D_{10}$ $C_c = (D_{30})^2 / (D_{10} \times D_{60})$
E. If soil contains ≥ 15% sand, add "with sand" to group name.
F. If fines classify as CL-ML, use dual symbol GC-GM or SC-SM.
G. If fines are organic, add "with organic fines" to group name.
H. Sands with 5 to 12% fines require dual symbols:
   SW-SM well-graded sand with silt
   SW-SC well-graded sand with clay
   SP-SM poorly graded sand with silt
   SP-SC poorly graded sand with clay
I. If soil contains ≥ 15% gravel, add "with gravel" to group name.
J. If Atterberg limits plot in hatched area, soil is CL-ML, silty clay.
K. If soil contains 15 to < 30% plus No. 200, add "with sand" or "with gravel", whichever is predominant.
L. If soil contains ≥ 30% plus No. 200, predominantly sand, add "sandy" to group name.
M. If soil contains ≥ 30% plus No. 200 predominantly gravel, add "gravelly" to group name.
N. PI ≥ 4 and plots on or above "A" line.
O. PI < 4 or plots below "A" line.
P. PI plots on or above "A" line.
Q. PI plots below "A" line.



Laboratory Tests

DD	Dry density, pcf	**q_p**	Pocket penetrometer strength, tsf
WD	Wet density, pcf	**q_u**	Unconfined compression test, tsf
P200	% Passing #200 sieve	**LL**	Liquid limit
MC	Moisture content, %	**PL**	Plastic limit
OC	Organic content, %	**PI**	Plasticity index

Particle Size Identification

Boulders	over 12"
Cobbles	3" to 12"
Gravel	
Coarse	3/4" to 3" (19.00 mm to 75.00 mm)
Fine	No. 4 to 3/4" (4.75 mm to 19.00 mm)
Sand	
Coarse	No. 10 to No. 4 (2.00 mm to 4.75 mm)
Medium	No. 40 to No. 10 (0.425 mm to 2.00 mm)
Fine	No. 200 to No. 40 (0.075 mm to 0.425 mm)
Silt	No. 200 (0.075 mm) to .005 mm
Clay	< .005 mm

Relative Proportions[L, M]

trace	0 to 5%
little	6 to 14%
with	≥ 15%

Inclusion Thicknesses

lens	0 to 1/8"
seam	1/8" to 1"
layer	over 1"

Apparent Relative Density of Cohesionless Soils

Very loose	0 to 4 BPF
Loose	5 to 10 BPF
Medium dense	11 to 30 BPF
Dense	31 to 50 BPF
Very dense	over 50 BPF

Consistency of Cohesive Soils	Blows Per Foot	Approximate Unconfined Compressive Strength
Very soft	0 to 1 BPF	< 0.25 tsf
Soft	2 to 4 BPF	0.25 to 0.5 tsf
Medium	5 to 8 BPF	0.5 to 1 tsf
Stiff	9 to 15 BPF	1 to 2 tsf
Very Stiff	16 to 30 BPF	2 to 4 tsf
Hard	over 30 BPF	> 4 tsf

Moisture Content:

Dry: Absence of moisture, dusty, dry to the touch.
Moist: Damp but no visible water.
Wet: Visible free water, usually soil is below water table.

Drilling Notes:

Blows/N-value: Blows indicate the driving resistance recorded for each 6-inch interval. The reported N-value is the blows per foot recorded by summing the second and third interval in accordance with the Standard Penetration Test, ASTM D1586.

Partial Penetration: If the sampler could not be driven through a full 6-inch interval, the number of blows for that partial penetration is shown as #/x" (i.e. 50/2"). The N-value is reported as "REF" indicating refusal.

Recovery: Indicates the inches of sample recovered from the sampled interval. For a standard penetration test, full recovery is 18", and is 24" for a thinwall/shelby tube sample.

WOH: Indicates the sampler penetrated soil under weight of hammer and rods alone; driving not required.

WOR: Indicates the sampler penetrated soil under weight of rods alone; hammer weight and driving not required.

Water Level: Indicates the water level measured by the drillers either while drilling (▽), at the end of drilling (▼), or at some time after drilling (⧗).

Re: Geotechnical Evaluation
Proposed DLH Taxiway A, Phase 6
Duluth International Airport
4701 Grinden Drive
Duluth, Minnesota

Dear Mr. Nelson:

We are pleased to present this Geotechnical Evaluation Report for the construction of Phase 6 of Taxiway A at the Duluth International Airport in Duluth, Minnesota.

Thank you for making Braun Intertec Corporation your geotechnical consultant for this project. If you have questions about this report, or if there are other services that we can provide in support of our work to date, please contact Colin Anderson at 320.305.0628 (coanderson@braunintertec.com).

Sincerely,

BRAUN INTERTEC CORPORATION

A. Introduction

A.1. Project Description

This Geotechnical Evaluation Report addresses the proposed design and construction of Phase 6 of the Taxiway A improvements at the Duluth International Airport located at 4701 Grinden Drive, in Duluth, Minnesota. This phase of the Taxiway A project includes the reconstruction and realignment of approximately 3,200 feet of Taxiway A, including the construction of a new connector taxiway to Runway 9-27 and the removal of an existing connector taxiway (Taxiway A2). The project area is north of the Cirrus Ramp. Figures 1 and 2 below show illustrations of the proposed site layout and the soil boring and core locations.

Figure 1. East Portion of Site Layout

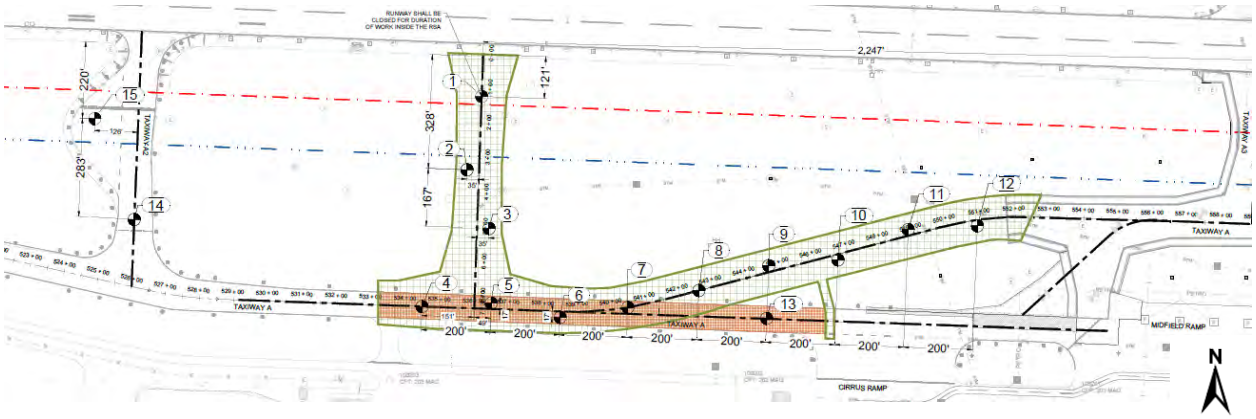

Figure provided by SEH, dated August 2024.

Figure 2. West Portion of Site Layout

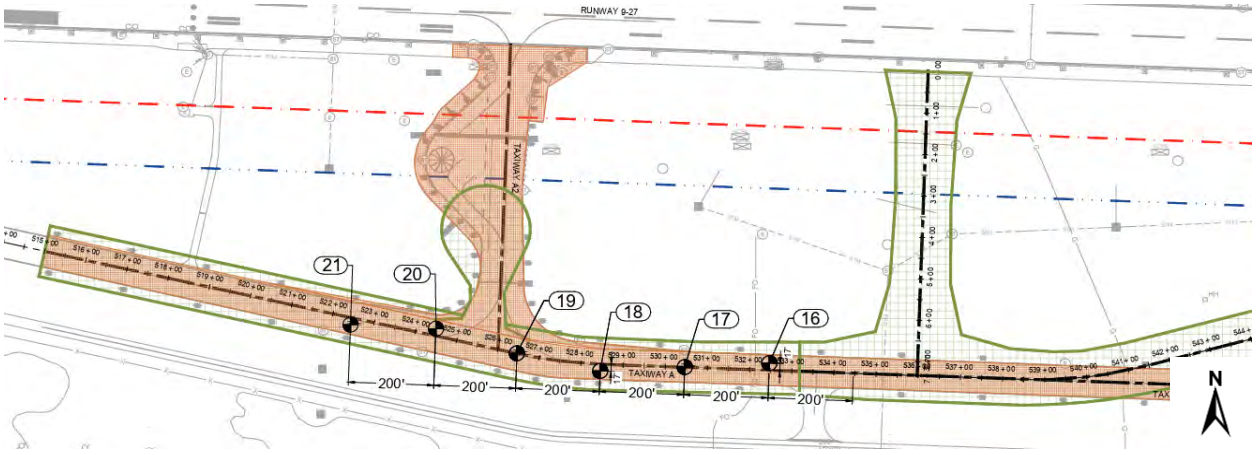

Figure provided by SEH, dated October 2024.

Based on conversations with Short Elliott Hendrickson, Inc. (SEH), we understand the desired new pavement section will be similar to the pavement sections of the previous phases of the Taxiway A project and consist of Cement Concrete Pavement (FAA P-501), underlain by Asphalt Mix Pavement (FAA P-401, FAA P-403, or MnDOT 2360), underlain by Crushed Aggregate Base Course (P-209), underlain by Granular Subbase (P-154).

We anticipate design elevations will be similar to the adjacent pavement elevations. We anticipate fills to meet design grades in the turf areas will be up to 10 feet. We have assumed design and construction will be in accordance with Federal Aviation Association (FAA) design and construction standards for aircrafts greater than 100,000 pounds.

A.2. Existing Conditions

Pavement condition index (PCI) data available from ARA, Inc. shows that the pavement surface of the Phase 6 area in December of 2024 was generally considered to be very good (PCI values of 78 to 83). The primary distress types noted in the bituminous pavements included longitudinal and transverse cracking. Figure 2 below shows an illustration of the PCI rating of each pavement feature at the Duluth International Airport at the time of the survey.

Figure 2. PCI Rating Summary

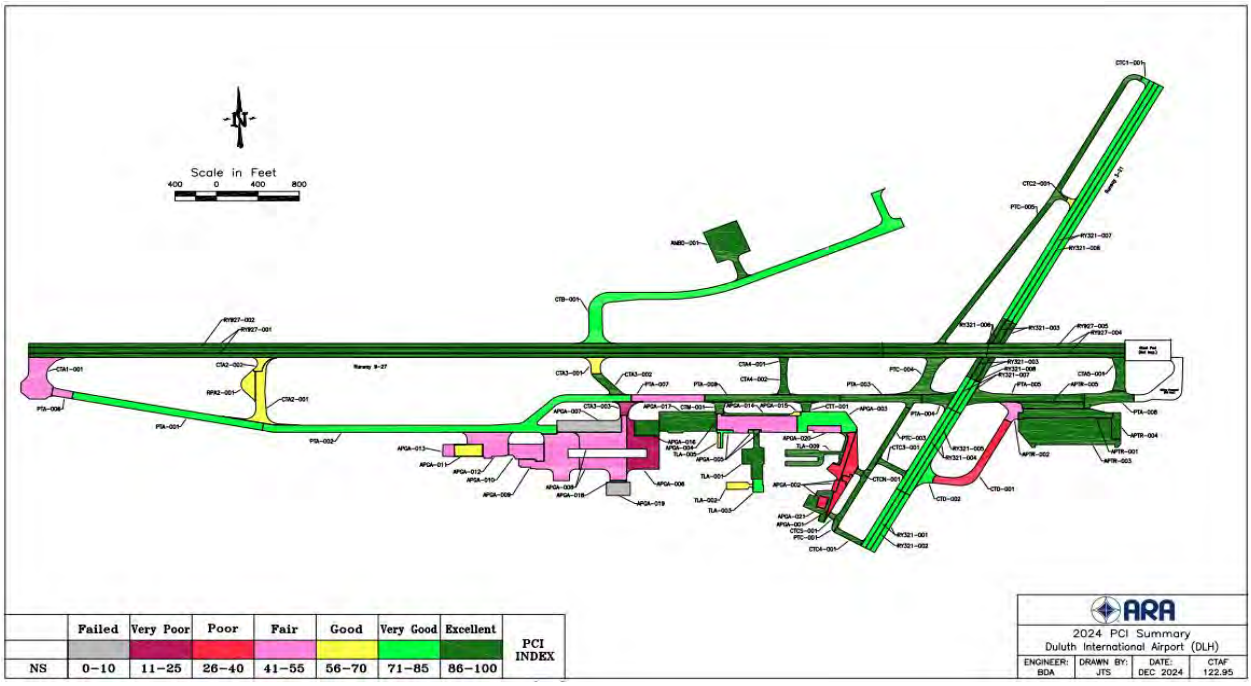

Figure provided by Applied Research Associates, Inc. (ARA), dated December 2024.

A.3. Purpose

The purpose of our geotechnical evaluation is to characterize subsurface geologic conditions at selected exploration locations, evaluate their impact on the project, and provide geotechnical recommendations for the design and reconstruction of the taxiway and adjacent connector taxiways.

A.4. Background Information and Reference Documents

We reviewed the following information:

- Soil boring figures showing the project limits and desired soil boring locations provided by SEH, dated August 2024 and October 2024.
- A Geologic Map of Minnesota, prepared by Howard C. Hobbs and Joseph E. Goebel, 1982.
- Advisory Circular 150/5320-6G, Airport Pavement Design and Evaluation, Federal Aviation Administration, June 7, 2021 (FAA AC/150).
- Pavement Condition Report prepared by Applied Research Associates, Inc. (ARA), December 2024.
- Communications with Jarrod Nelson, PE, SEH, regarding the scope of the proposed project.
- Aerial photographs of the project areas using Google Earth®.

We have described our understanding of the proposed construction and site to the extent others reported it to us. Depending on the extent of available information, we may have made assumptions based on our experience with similar projects. If we have not correctly recorded or interpreted the project details, the project team should notify us. New or changed information could require additional evaluation, analyses and/or recommendations.

A.5. Scope of Services

We performed our scope of services for the project in accordance with our Proposals QTB198606 and QTB205635 to Mr. Nelson, dated August 26, 2024, and November 7, 2024, respectively. The following list describes the geotechnical tasks completed in accordance with our authorized scope of services.

- Reviewing the background information and reference documents previously cited.
- Clearing the exploration locations of underground utilities. SEH selected and staked the new exploration locations. The Soil Boring Figures included in the Appendix show the approximate locations of the borings.
- Performing 21 standard penetration test (SPT) borings denoted as Borings 1 to 21, to depths of 9.7 to 21 feet below grade.
- Performing eight pavement cores denoted as C-4 to C-7 and C-13 to C-16. Note that cores C-17 to C-21 were not able to be completed due to mechanical issues with our coring machine.
- Performing laboratory testing on select samples to aid in soil classification and engineering analysis.
- Preparing this report containing a boring location sketch, logs of soil borings, a summary of the soils encountered, results of laboratory tests, and recommendations for pavement subgrade preparation and a recommended California Bearing Ratio (CBR) value to aid in pavement design.

Our scope of services did not include environmental services or testing and our geotechnical personnel performing this evaluation are not trained to provide environmental services or testing. We can provide environmental services or testing at your request.

B. Results

B.1. Geologic Overview

We based the geologic origins used in this report on the soil types, laboratory testing, and available common knowledge of the geological history of the site. Because of the complex depositional history, geologic origins can be difficult to ascertain. We did not perform a detailed investigation of the geologic history for the site.

B.2. Pavement Core Results

We cored the existing pavement in eight locations. Table 1 below provides a summary of the pavement thicknesses. Photos of the typical pavement encountered in Taxiway A and the adjacent pavement areas are displayed in Table 2.

Table 1. Summary of Core Results

Core Number	Bituminous Thickness (inches)	Concrete Thickness (inches)
C-4	10 1/2	---
C-5	13 3/4	---
C-6	13 1/2	---
C-7	13	---
C-13	10	---
C-14	11 1/2	---
C-15	---	11 1/2
C-16	13 1/4	---

Table 2. Core Photos

C-5[1]	C-6[2]	C-15

[1] Cores C-5 and C-7 were bituminous pavements with good pavement matrices.

[2] Cores C-4, C-6, C-13, C-14, and C-16 appeared to consist of older bituminous pavement with 3-4 distinct pavement layers, moderate weathering, and large aggregate at the base of the cores. Core C-6 is inverted in the photo above.

B.3. Boring Results

Table 3 provides a summary of the soil boring results, in the general order we encountered the strata. Please refer to the Log of Boring sheets in the Appendix for additional details. The Descriptive Terminology sheets in the Appendix include definitions of abbreviations used in Table 3.

Table 3. Subsurface Profile Summary

Strata	Soil Type - ASTM Classification	Range of Penetration Resistances	Commentary and Details
Pavement section	---	---	▪ Overall thickness ranges from 10 to 28 3/4 inches. ▪ Bituminous thickness ranges from 10 to 17 inches. ▪ Concrete thickness is 11 1/2 inches. ▪ Apparent aggregate base was encountered beneath the pavement section at Borings 4 to 7 and 16 to 21. Thickness ranges from 6 to 15 inches. ▪ No discernable aggregate base layer was encountered beneath the pavement at Borings 13 to 15.
Topsoil or topsoil fill	SM	---	▪ Dark brown and brown in color. ▪ Thicknesses ranged from 3 to 6 inches. ▪ Moisture conditions are generally moist.
Fill	SP-SM, SM, SC, ML, OL	---	▪ Encountered in all borings except Boring 9. ▪ Extended to depths ranging from 3 1/2 to 9 feet. ▪ Generally nonorganic except in Boring 3. ▪ Black and dark brown organic clay fill soils with wood fragments encountered in Boring 3 from depths of 5 to 9 feet. ▪ Boring 8 encountered dark brown silt with wood fragments from 5 to 6 1/2 feet. ▪ General penetration resistance of sandy fill soils is 10 to 30 BPF. ▪ Reddish brown, brown, and dark brown, in color. ▪ Moisture conditions are generally moist to wet.
Swamp deposits	OL, PT	4 to 6 BPF	▪ Organic clays encountered at depths of 5 to 12 feet in Borings 3 and 11. ▪ Peat encountered at depths of 4 to 18 feet in Borings 12 and 20. ▪ Thickness ranges from 1 1/2 to 9 feet. ▪ Dark gray and black in color. ▪ Moisture conditions are generally moist

Strata	Soil Type - ASTM Classification	Range of Penetration Resistances	Commentary and Details
Glacial till	SM, ML, CL	8 BPF to Refusal*	▪ General penetration resistance of 15 to 25 BPF indicating that the glacial till soils are generally medium dense, or stiff to very stiff. ▪ Variable amounts of sand and gravel. ▪ Reddish brown in color. ▪ Moisture conditions are generally moist to wet.
Alluvium	ML, CL	4 to 9 BPF	▪ General penetration resistances indicate that the alluvial soils are generally loose or medium to stiff. ▪ Reddish brown in color. ▪ Moisture conditions are generally moist to wet.
Glacial outwash	SP-SM	26 to 57 BPF	▪ Encountered at a depth of 6 1/2 feet in Boring 21. ▪ General penetration resistances indicate that the glacial sands are generally medium dense to very dense. ▪ Reddish brown in color. ▪ Moisture conditions are generally moist to wet.

*Refusal is defined as the sampler not being driven through a full 6-inch interval by 50 blows.

We did not perform gradation analysis on the apparent aggregate base material encountered as part of the pavement section, in accordance with our scope of work. Therefore, we cannot conclusively determine if the encountered material satisfies a particular specification, and it should not be assumed it is suitable for reuse.

For simplicity in this report, we define fill to mean existing, uncontrolled or undocumented fill.

B.4. Groundwater

Table 4 summarizes the depths where we observed groundwater; the attached Log of Boring sheets in the Appendix also include this information and additional details.

Table 4. Groundwater Summary

Boring Location	Surface Elevation (ft)	Measured or Estimated Depth to Groundwater (ft)	Corresponding Groundwater Elevation (ft)
1	1415	10	1404
2	1417	Not Observed	---
3	1415	5	1410
4	1419	10	1405
5	1419	Not Observed	---
6	1419	Not Observed	---
7	1419	Not Observed	---
8	1417	Not Observed	---
9	1415	Not Observed	---
10	1414	Not Observed	---
11	1411	Not Observed	---
12	1410	10	1400
13	1419	7 1/2	1411 1/2
14	1419	Not Observed	---
15	1416	Not Observed	---
16	1419	Not Observed	---
17	1419	Not Observed	---
18	1419	Not Observed	---
19	1420	Not Observed	---
20	1419	Not Observed	---
21	1419	9 1/2	1409 1/2

At the time of our observation, the groundwater surface elevation appeared to range from approximately 1400 to 1411 1/2 feet. The soil borings indicate a layered soil profile that is conducive for encountering trapped water conditions. Groundwater may take days or longer to reach equilibrium in the boreholes and we backfilled the boreholes immediately after completion or after groundwater samples were taken, in accordance with our scope of work. If the project team identifies a need for more accurate determination of groundwater depth, we can install piezometers. Project planning should anticipate seasonal and annual fluctuations of groundwater.

B.5. Laboratory Test Results

B.5.a. Moisture Contents

The moisture content of the soil samples varied from 4 to 21 percent, indicating that the material was either near or above its estimated optimum moisture content for compaction. Moisture content of the organic clay fill soils in Borings 3 and 11 varied from 40 to 87 percent and the peat in Borings 12 and varied from 109 to 416 percent. The moisture contents are displayed in the "MC" column on the Log of Boring sheets in the Appendix.

B.5.b. Percent Passing the #200 Sieve Tests

We performed tests to evaluate the percent of particles passing the #200 sieve (P200) (per ASTM D1140) to estimate the engineering properties of the subgrade material. The results of these tests indicated the soils encountered had P200s ranging from 8 to 37 percent. The Log of Boring sheets list the results of P200 tests in the "Tests or Remarks" column.

B.5.c. Atterberg Limits

We performed four Atterberg limits tests (per ASTM D4318) on selected samples for classification, evaluation of the soil's plasticity, and estimation of engineering parameters related to Frost Groups. The tests on the bag samples from Borings 5, 11, and 20 indicated the material was not plastic. The results of the Atterberg limits test on the bag sample from Boring 2 indicated the soil tested had a liquid limit (LL) of 19 percent, plastic limit (PL) of 16 percent, and plasticity index (PI) of 3 percent, indicating the tested soils were silty sand and are classified in Frost Group FG-3. The Log of Boring sheets list the results of Atterberg limits tests in the "Tests or Notes" column.

B.5.d. Mechanical Sieve-Hydrometer Tests

Four mechanical sieve-hydrometer analyses (ASTM D422) were performed on selected samples to aid in classification. The tests indicated the samples tested were classified as silty sand and silty sand with gravel. Graphical representation of the results of the mechanical sieve-hydrometer grain size analyses are attached in the Appendix.

B.5.e. Modified Proctor and CBR Tests

Four modified Proctor tests (ASTM D1557) were performed on bulk samples to aid in estimating the CBR value of the soils. The results of the modified Proctor tests are provided in Table 5 below and in graphical representation attached in the Appendix.

California Bearing Ratio (CBR) tests (per ASTM D1883) were performed on bulk samples collected from auger cuttings of four borings. The CBR tests were performed on remolded samples that were compacted to 95 percent of the material's modified Proctor maximum dry density near the optimum moisture content. We reported the greater CBR value between the penetrations at 0.1 and 0.2 inches in the table below. The results of the CBR tests are summarized in Table 5 and individual test reports are provided in the Appendix.

Table 5. Laboratory Compaction/Strength Test Results

Location	Classification	Maximum Dry Density (pcf)	Optimum Moisture Content (%)	CBR Result
2	Silty Sand with Gravel (SM)	141.5	6.3	24.7
5	Silty Sand with Gravel (SM)	143.9	5.0	46.8
11	Silty Sand (SM)	117.3	13.7	7.8
19	Silty Sand with Gravel (SM)	140.8	6.1	66.7

C. Recommendations

C.1. Design and Construction Discussion

C.1.a. Frost Protection

The subgrade soils at the site are considered frost susceptible. Based on the FAA Advisory Circular 150/5320-6G, Table 2-2. Soil Frost Groups, the subgrade soils are classified in Frost Groups FG-3 and FG-4. The FAA recommends that frost protection be handled in one of three ways: 1) the complete frost protection method, 2) the limited subgrade frost penetration or 3) reduced subgrade strength method. The complete frost protection method requires removal of all frost-susceptible soil down to the frost penetration depth. The limited subgrade frost penetration method allows frost to penetrate a limited amount into the underlying frost susceptible soils. Typically, thickness of the non-frost susceptible soils is 65 percent of the extreme frost penetration depth. The reduced subgrade strength method uses a reduced CBR value to account for the frost melting period when the subgrade soils are weakest.

Based on the design CBR value of the in-place materials of 14.2 percent and the frost susceptibility of the existing soils, it is our opinion that the limited subgrade frost penetration method is appropriate to mitigate frost heave of the Phase 6 portion of Taxiway A. Using an anticipated frost depth of 60 inches, pavement design should incorporate a non-frost susceptible section of 39 inches.

C.1.b. Organic Soils

Borings 3 and 11 encountered dark gray and black organic clay soils to depths of 6 1/2 and 12 feet. Borings 12 and 20 encountered peat to depths of 9 and 18 feet. The organic clay and peat soils are highly compressible. These soils will not provide a stable working platform during the placement of additional fill and/or pavement materials. Excessive settlement may occur under additional fill loads as well as planned aircraft traffic loads.

For estimating quantities, peat can compress to one-half its thickness or one-half the total thickness of the fill, whichever is less; organic clay can compress to one-fourth its thickness or one-fourth the total thickness of the fill, whichever is less. Based on these approximations, and assuming grades will be raised by approximately 6 to 10 feet in turf areas, our estimates of settlement during fill placement range from 1/2 to 2 1/2 feet. In addition, we anticipate these soils will continue to compress over time, which could lead to several more inches of additional long-term settlement. If the organic soils are left in place below the pavement areas, the airport must accept the risk of the settlement described above.

Based on our conversations with the project team, the steps below will be taken to mitigate the settlement of the organic soils.

Boring 3 - Surcharge:

- All grading to the top of the Crushed Aggregate Base Course (FAA P-209) will be completed at least 2 months prior to paving.
- Several points along the surface of the embankment will be periodically surveyed and monitored to determine if the rate of settlement is slowing before paving.
- Before paving, the Crushed Aggregate Base Course (FAA P-209) should be regraded and compacted.

Borings 11 and 12 – Remove and Replace:

- Organic soils and peat will be removed in the Borings 11 and 12 area as described in Section C.2.a.
- We recommend test pits be performed under the direct supervision of a geotechnical engineer or representative to define the extent of the organic soils.
- Granular Subbase (FAA P-154) should be used as backfill and statically rolled in wet areas. Non-organic subgrade soils can be used as backfill in stable areas to a depth of 39 inches below the top of pavement.

Boring 20 – Left in Place:

- No grade change is planned for the reconstruction near Boring 20.
- We anticipate the settlement of the peat at this location has taken place over many years of aircraft traffic and no significant settlement should be anticipated.
- Care should be taken to not disturb the subgrade soils in the Boring 20 area. The subgrade soils should not be subcut more than the planned 39 inches below the top of pavement.
- The project team should consider incorporating Geogrid between the Granular Subbase (FAA P-154) and Crushed Aggregate Base Course (FAA P-209) from Sta. 523+50 to Sta. 525+50.

C.2. Site Grading and Subgrade Preparation

C.2.a. Pavement Subgrade Preparation

We recommend completely removing all topsoil and bituminous and concrete pavement from the proposed pavement areas. Based on the borings, we anticipate removals of the pavements will likely extend 10 to 28 inches in the pavement areas, and 3 to 6 inches in the grass surfaced areas. Additional removals will be needed for frost penetration as discussed in Section C.1.a.

As discussed in Section C.1.b., we recommend the organic clay and peat soils be removed from beneath the pavement areas near Borings 11 and 12. Table 6 below provides the anticipated excavation depths.

Table 6. Excavation Depths

Boring	Ground Elevation	Anticipated Excavation Depth	Anticipated Bottom of Excavation Elevation
11	1411	6 1/2	1404 1/2
12	1410	9	1401

Excavation depths will vary between the borings. Portions of the excavations may also extend deeper than indicated by the borings. A geotechnical representative should observe the excavations to make the necessary field judgments regarding the suitability of the exposed soils.

When removing unsuitable materials below pavements, we recommend the excavation extend outward and downward at a slope of 1H:1V (horizontal:vertical) or flatter beyond the edge of the pavement.

Care should be taken to protect the existing pavements from undermining or sloughing if the excavations approach the existing pavement areas.

After completion of the removals, we recommend scarifying (thoroughly mixing/disking) the resulting subgrades to a depth of at least 1/2-foot, moisture conditioning, and recompacting to the requirements in Section C.2.b prior to placing additional fill and pavement materials. The excavation subgrades for organic removals will likely wet. We recommend not scarifying and compacting these subgrades. We recommend placement and compaction of sand fill directly on the excavated subgrades if they are wet.

C.2.b. Engineered Fill Materials and Compaction

Table 7 below contains our recommendations for engineered fill materials.

Table 7. Engineered Fill Materials*

Locations To Be Used	Engineered Fill Classification	Possible Soil Type Descriptions	Gradation	Additional Requirements
▪ Embankment fill below 39 inches	FAA P-152	SP-SM, SP-SC, SM, SC, CL	100% passing 2-inch sieve	< 2% Organic Content (OC)
▪ Subbase Course ▪ Non-frost-susceptible ▪ Wet Subgrades	FAA P-154	GP, GW, GP-GM, GW-GM SP, SW, SP-SM, SW-SM	100% passing 3-inch sieve < 60% passing #40 sieve < 10% passing #200 sieve	< 2% OC
Below landscaped surfaces, where subsidence is not a concern	Non-structural fill	All	100% passing 6-inch sieve	< 10% OC

We recommend spreading engineered fill in loose lifts of approximately 8 to 12 inches thick. We recommend compacting engineered fill in accordance with the criteria presented below in Table 8. The project documents should specify relative compaction of engineered fill.

Table 8. Compaction Recommendations Summary

Reference	Relative Compaction, percent (ASTM D1557 – Modified Proctor)	Moisture Content Variance from Optimum, percentage points
Cohesive Subgrade/Embankment (P-152) (Below 39 inches)	95	±2
Non-cohesive Subgrade/Embankment (P-152) (Below 39 inches)	100	±2
Subbase Course (P-154) (Upper 39 inches)	100	±2
Below landscaped surfaces	90	±5

The project documents should not allow the contractor to use frozen material as engineered fill or to place engineered fill on frozen material. Frost should not penetrate under foundations during construction.

We recommend performing density tests in engineered fill to evaluate if the contractors are effectively compacting the soil and meeting project requirements.

C.2.c. Pavement Subgrade Proofroll

After preparing the subgrade as described above and prior to the placement of the subbase course, we recommend proofrolling the subgrade soils with a fully loaded tandem-axle truck as required by specification P-152. We also recommend having a geotechnical representative observe the proofroll. Areas that fail the proofroll likely indicate soft or weak areas that will require additional soil correction work to support pavements.

The contractor should correct areas that display excessive yielding or rutting during the proofroll or surficial compaction, as determined by the geotechnical representative. Possible options for subgrade correction include moisture conditioning and recompaction, subcutting and replacement with soil or crushed aggregate, or geotextiles. We recommend performing a second proofroll after the aggregate base material is in place, and prior to placing pavement.

C.3. Pavements

C.3.a. Subgrade Stiffness Values

The average CBR value was calculated as 36.5 percent, and the standard deviation was calculated as 22.3. Therefore, based on FAA guidance for determining the design CBR using a value that is one standard deviation below the mean, it would be reasonable to design the pavement using a CBR of 14.2 percent.

This CBR value correlates to a modulus of subgrade reaction value (k) of 225 pci using the following correlation provided in FAA Advisory Circular 150/5320-6G section 3.16.4.1.

$$k\ (pci) = 28.6926 \times CBR^{0.7788}$$

C.3.b. Materials and Compaction

We recommend specifying crushed aggregate base meeting Federal Aviation Administration (FAA) Standard for Specifying Construction of Airports: Item P-209 Crushed Aggregate Base Course. Furthermore, we recommend specifying that the bituminous and concrete pavement meet either Federal

Aviation Administration (FAA) Standard for Specifying Construction of Airports: Item P-401 or P-403 Asphalt Mix Pavement and Item P-501 Cement Concrete Pavement.

We recommend compacting crushed aggregate base and granular subbase placed within 3 feet of pavement subgrade elevations to at least 100 percent of their maximum modified Proctor dry densities (ASTM D1557).

C.3.c. Drainage

We recommend that a subsurface drainage system be installed in order to reduce the amount of water in the frost zone. The drainage system should include a drainage pipe along each side of the excavation with an outlet at the lowest elevation to allow the water to be drained away from the pavement subgrade.

C.3.d. Performance and Maintenance

Many conditions affect the overall performance of the pavements. Some of these conditions include the environment, loading conditions and the level of ongoing maintenance. We recommend developing a regular maintenance plan for filling cracks in pavements to lessen the potential impacts for cold weather distress due to frost heave or warm weather distress due to wetting and softening of the subgrade.

D. Procedures

D.1. Pavement Cores

We obtained core samples of the pavement using a truck-mounted coring machine advancing a 6-inch diameter core barrel. After completing the boring at the core location, we repaired the pavement with a cold-mix bituminous patch. We measured the cores to obtain approximate pavement thickness and noted their material conditions based on visual observation.

D.2. Penetration Test Borings

We drilled the penetration test borings with a truck-mounted core and auger drill equipped with hollow-stem auger. We performed the borings in general accordance with ASTM D6151 taking penetration test samples at continuous or 2 1/2-foot intervals in general accordance with ASTM D1586. The boring logs

show the actual sample intervals and corresponding depths. We also collected bulk samples of auger cuttings at selected locations for laboratory testing.

D.3. Exploration Logs

D.3.a. Log of Boring Sheets

The Appendix includes Log of Boring sheets for our penetration test borings. The logs identify and describe the penetrated geologic materials and present the results of penetration resistance tests performed. The logs also present the results of laboratory tests performed on penetration test samples, and groundwater measurements. The Appendix also includes a Fence Diagram intended to provide a summarized cross-sectional view of the soil profile across the site.

We inferred strata boundaries from changes in the penetration test samples and the auger cuttings. At depths we did not perform continuous sampling, the strata boundary depths are only approximate. The boundary depths likely vary away from the boring locations, and the boundaries themselves may occur as gradual rather than abrupt transitions.

D.3.b. Geologic Origins

We assigned geologic origins to the materials shown on the logs and referenced within this report, based on: (1) a review of the background information and reference documents cited above, (2) visual classification of the various geologic material samples retrieved during the course of our subsurface exploration, (3) penetration resistance testing performed for the project, (4) laboratory test results, and (5) available common knowledge of the geologic processes and environments that have impacted the site and surrounding area in the past.

D.4. Material Classification and Testing

D.4.a. Visual and Manual Classification

We visually and manually classified the geologic materials encountered based on ASTM D2488. When we performed laboratory classification tests, we used the results to classify the geologic materials in accordance with ASTM D2487. The Appendix includes a chart explaining the classification system we used.

D.4.b. Laboratory Testing

The exploration logs in the Appendix note most of the results of the laboratory tests performed on geologic material samples. The remaining laboratory test results follow the exploration logs. We performed the tests in general accordance with ASTM or AASHTO procedures.

D.5. Groundwater Measurements

The drillers checked for groundwater while advancing the penetration test borings, and again after auger withdrawal. We then filled the boreholes or allowed them to remain open for an extended period of observation, as noted on the boring logs.

E. Qualifications

E.1. Variations in Subsurface Conditions

E.1.a. Material Strata

We developed our evaluation, analyses, and recommendations from a limited amount of site and subsurface information. It is not standard engineering practice to retrieve material samples from exploration locations continuously with depth. Therefore, we must infer strata boundaries and thicknesses to some extent. Strata boundaries may also be gradual transitions, and project planning should expect the strata to vary in depth, elevation, and thickness, away from the exploration locations.

Variations in subsurface conditions present between exploration locations may not be revealed until performing additional exploration work or starting construction. If future activity for this project reveals any such variations, you should notify us so that we may reevaluate our recommendations. Such variations could increase construction costs, and we recommend including a contingency to accommodate them.

E.1.b. Groundwater Levels

We made groundwater measurements under the conditions reported herein and shown on the exploration logs and interpreted in the text of this report. Note that the observation periods were relatively short, and project planning can expect groundwater levels to fluctuate in response to rainfall, flooding, irrigation, seasonal freezing and thawing, surface drainage modifications and other seasonal and annual factors.

E.2. Continuity of Professional Responsibility

E.2.a. Plan Review

We based this report on a limited amount of information, and we made a number of assumptions to help us develop our recommendations. We should be retained to review the geotechnical aspects of the designs and specifications. This review will allow us to evaluate whether we anticipated the design correctly, if any design changes affect the validity of our recommendations, and if the design and specifications correctly interpret and implement our recommendations.

E.2.b. Construction Observations and Testing

We recommend retaining us to perform the required observations and testing during construction as part of the ongoing geotechnical evaluation. This will allow us to correlate the subsurface conditions exposed during construction with those encountered by the borings and provide professional continuity from the design phase to the construction phase. If we do not perform observations and testing during construction, it becomes the responsibility of others to validate the assumption made during the preparation of this report and to accept the construction-related geotechnical engineer-of-record responsibilities.

E.3. Use of Report

This report is for the exclusive use of the addressed parties. Without written approval, we assume no responsibility to other parties regarding this report. Our evaluation, analyses and recommendations may not be appropriate for other parties or projects.

E.4. Standard of Care

In performing its services, Braun Intertec used that degree of care and skill ordinarily exercised under similar circumstances by reputable members of its profession currently practicing in the same locality. No warranty, express or implied, is made.

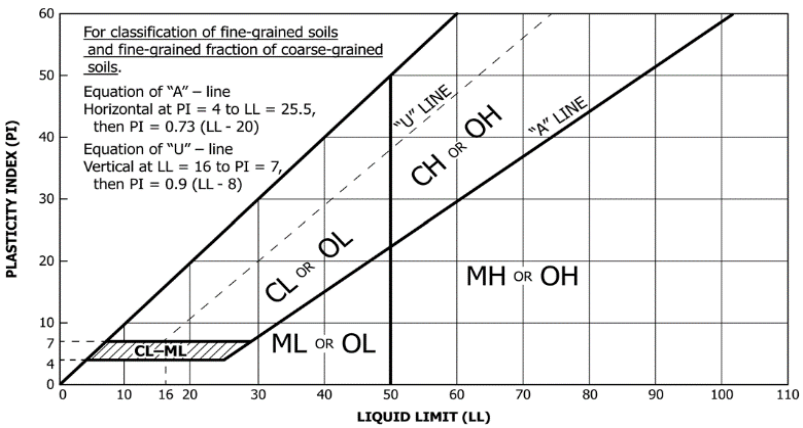
Descriptive Terminology of Soil

Based on Standards ASTM D2487/2488
(Unified Soil Classification System)

Criteria for Assigning Group Symbols and Group Names Using Laboratory Tests[A]				Soil Classification	
				Group Symbol	Group Name[B]
Coarse-grained Soils (more than 50% retained on No. 200 sieve)	Gravels (More than 50% of coarse fraction retained on No. 4 sieve)	Clean Gravels (Less than 5% fines[C])	$C_u \geq 4$ and $1 \leq C_c \leq 3$[D]	GW	Well-graded gravel[E]
			$C_u < 4$ and/or ($C_c < 1$ or $C_c > 3$)[D]	GP	Poorly graded gravel[E]
		Gravels with Fines (More than 12% fines[C])	Fines classify as ML or MH	GM	Silty gravel[E F G]
			Fines Classify as CL or CH	GC	Clayey gravel[E F G]
	Sands (50% or more coarse fraction passes No. 4 sieve)	Clean Sands (Less than 5% fines[H])	$C_u \geq 6$ and $1 \leq C_c \leq 3$[D]	SW	Well-graded sand[I]
			$C_u < 6$ and/or ($C_c < 1$ or $C_c > 3$)[D]	SP	Poorly graded sand[I]
		Sands with Fines (More than 12% fines[H])	Fines classify as ML or MH	SM	Silty sand[F G I]
			Fines classify as CL or CH	SC	Clayey sand[F G I]
Fine-grained Soils (50% or more passes the No. 200 sieve)	Silts and Clays (Liquid limit less than 50)	Inorganic	PI > 7 and plots on or above "A" line[J]	CL	Lean clay[K L M]
			PI < 4 or plots below "A" line[J]	ML	Silt[K L M]
		Organic	Liquid Limit – oven dried / Liquid Limit – not dried <0.75	OL	Organic clay[K L M N] / Organic silt[K L M O]
	Silts and Clays (Liquid limit 50 or more)	Inorganic	PI plots on or above "A" line	CH	Fat clay[K L M]
			PI plots below "A" line	MH	Elastic silt[K L M]
		Organic	Liquid Limit – oven dried / Liquid Limit – not dried <0.75	OH	Organic clay[K L M P] / Organic silt[K L M Q]
Highly Organic Soils		Primarily organic matter, dark in color, and organic odor		PT	Peat

A. Based on the material passing the 3-inch (75-mm) sieve.
B. If field sample contained cobbles or boulders, or both, add "with cobbles or boulders, or both" to group name.
C. Gravels with 5 to 12% fines require dual symbols:
   GW-GM well-graded gravel with silt
   GW-GC well-graded gravel with clay
   GP-GM poorly graded gravel with silt
   GP-GC poorly graded gravel with clay
D. $C_u = D_{60} / D_{10}$ $C_c = (D_{30})^2 / (D_{10} \times D_{60})$
E. If soil contains ≥ 15% sand, add "with sand" to group name.
F. If fines classify as CL-ML, use dual symbol GC-GM or SC-SM.
G. If fines are organic, add "with organic fines" to group name.
H. Sands with 5 to 12% fines require dual symbols:
   SW-SM well-graded sand with silt
   SW-SC well-graded sand with clay
   SP-SM poorly graded sand with silt
   SP-SC poorly graded sand with clay
I. If soil contains ≥ 15% gravel, add "with gravel" to group name.
J. If Atterberg limits plot in hatched area, soil is CL-ML, silty clay.
K. If soil contains 15 to < 30% plus No. 200, add "with sand" or "with gravel", whichever is predominant.
L. If soil contains ≥ 30% plus No. 200, predominantly sand, add "sandy" to group name.
M. If soil contains ≥ 30% plus No. 200 predominantly gravel, add "gravelly" to group name.
N. PI ≥ 4 and plots on or above "A" line.
O. PI < 4 or plots below "A" line.
P. PI plots on or above "A" line.
Q. PI plots below "A" line.



Particle Size Identification

Boulders..... over 12"
Cobbles..... 3" to 12"
Gravel
  Coarse..... 3/4" to 3" (19.00 mm to 75.00 mm)
  Fine..... No. 4 to 3/4" (4.75 mm to 19.00 mm)
Sand
  Coarse..... No. 10 to No. 4 (2.00 mm to 4.75 mm)
  Medium..... No. 40 to No. 10 (0.425 mm to 2.00 mm)
  Fine..... No. 200 to No. 40 (0.075 mm to 0.425 mm)
Silt..... No. 200 (0.075 mm) to .005 mm
Clay..... < .005 mm

Relative Proportions[L, M]

trace..... 0 to 5%
little..... 6 to 14%
with..... ≥ 15%

Inclusion Thicknesses

lens..... 0 to 1/8"
seam..... 1/8" to 1"
layer..... over 1"

Apparent Relative Density of Cohesionless Soils

Very loose ..... 0 to 4 BPF
Loose ..... 5 to 10 BPF
Medium dense..... 11 to 30 BPF
Dense..... 31 to 50 BPF
Very dense..... over 50 BPF

Consistency of Cohesive Soils	Blows Per Foot	Approximate Unconfined Compressive Strength
Very soft	0 to 1 BPF	< 0.25 tsf
Soft	2 to 4 BPF	0.25 to 0.5 tsf
Medium	5 to 8 BPF	0.5 to 1 tsf
Stiff	9 to 15 BPF	1 to 2 tsf
Very Stiff	16 to 30 BPF	2 to 4 tsf
Hard	over 30 BPF	> 4 tsf

Moisture Content:

Dry: Absence of moisture, dusty, dry to the touch.
Moist: Damp but no visible water.
Wet: Visible free water, usually soil is below water table.

Drilling Notes:

Blows/N-value: Blows indicate the driving resistance recorded for each 6-inch interval. The reported N-value is the blows per foot recorded by summing the second and third interval in accordance with the Standard Penetration Test, ASTM D1586.

Partial Penetration: If the sampler could not be driven through a full 6-inch interval, the number of blows for that partial penetration is shown as #/x" (i.e. 50/2"). The N-value is reported as "REF" indicating refusal.

Recovery: Indicates the inches of sample recovered from the sampled interval. For a standard penetration test, full recovery is 18", and is 24" for a thinwall/shelby tube sample.

WOH: Indicates the sampler penetrated soil under weight of hammer and rods alone; driving not required.

WOR: Indicates the sampler penetrated soil under weight of rods alone; hammer weight and driving not required.

Water Level: Indicates the water level measured by the drillers either while drilling (▽), at the end of drilling (▼), or at some time after drilling (▽▼).

Laboratory Tests

DD	Dry density, pcf	**OC**	Organic content, %	**LL**	Liquid limit
WD	Wet density, pcf	**q_p**	Pocket penetrometer strength, tsf	**PL**	Plastic limit
P200	% Passing #200 sieve	**MC**	Moisture content, %	**PI**	Plasticity index
		q_U	Unconfined compression test, tsf

Dear Mr. Welch:

Please find enclosed the Phase I Environmental Site Assessment (ESA) for the property associated with the Taxiway A Reconstruction – Phase 7 project located at the Duluth International Airport in Duluth, St. Louis County, Minnesota. Thank you for choosing SEH to complete this assessment. Please feel free to contact me at 651.318.0354 if you have any questions.

Sincerely,

Keri B. Aufdencamp

Executive Summary

Phase I Environmental Site Assessment

Short Elliott Hendrickson Inc. (SEH®) was retained by the Duluth Airport Authority (DAA) to conduct a Phase I Environmental Site Assessment (ESA) of the project areas associated with the proposed Taxiway A Reconstruction – Phase 7 project located at the Duluth International Airport (DLH) in Duluth, St. Louis County, Minnesota (herein referred to as "Subject Property").

This Phase I ESA was completed in general accordance with ASTM International (ASTM) Practice E1527-21 and in general accordance with All Appropriate Inquiries. The purpose of this Phase I ESA was to identify, to the extent feasible pursuant to the processes described in ASTM Practice E1527-21 and in a manner consistent with good commercial or customary practice, Recognized Environmental Conditions (RECs), Controlled RECs (CRECs) and Historical RECs (HRECs) in connection with the Subject Property.

The Subject Property includes three project areas that are identified as:

- Taxiway A Reconstruction Area
- Terminal Stormwater Pond Expansion Area
- and the Northern Stormwater Pond Dredge Area.

These three separate project areas are generally located in the western, southeastern, and northern parts of the DLH, respectively.

The Subject Property encompasses portions of St. Louis County parcel identification numbers (PINs) 010-2747-00160, 010-2747-00210, 010-2747-00220, 280-0031-00455, 280-0031-00456, 395-0010-00330, 395-0010-00348, 395-0010-00349, 395-0010-00350, and 395-0010-00550.

Taxiway A is the parallel taxiway for the Runway 9/27 serving DLH. The existing Taxiway A is approximately 10,700 feet in length and the reconstruction is proposed to be completed in nine phases. Phase 7 of the Taxiway A Reconstruction project, consists of an approximately 2,400-foot-long portion of the taxiway at its western end.

The Taxiway A Reconstruction Area was undeveloped and occupied by low-lying wetland on historic maps. By the 1930s, the Taxiway A Reconstruction Area was developed as farmland, and by the early 1950s, the eastern portion of the Taxiway A Reconstruction Area was developed as part of the DLH. Additional improvements to the DLH occurred through the 1960s with minimal changes observed through the present day.

The Terminal Stormwater Pond Expansion Area is located southeast of the terminal building serving DLH. The existing pond is located directly east of the southeastern corner of the large surface parking lot south of the terminal building. The Terminal Stormwater Pond Expansion Area is approximately 25,000 square feet in size and will expand the footprint of the existing stormwater pond to the west.

The Terminal Stormwater Pond Expansion portion of the Subject Property was undeveloped and occupied by low-lying wetland on historic maps. Although adjacent development of various portions of the DLH occurred as early as the late 1940s, the pond area remained undeveloped through the early 2020s. By the mid-2020s, the existing stormwater pond was constructed.

The Northern Stormwater Pond Dredge Area is located north of the airfield at the end of Warhawk Drive. The existing stormwater pond is located directly north of the end of Warhawk Drive and is accessed by a gravel access road. The Northern Stormwater Pond Dredge will consist of the removal of approximately 1,000 cubic yards of material from the existing pond to restore the storage capacity of the pond. The pond footprint will not be expanded.

The Northern Stormwater Pond Dredge Area was undeveloped and occupied by a drainage ditch since at least the late 1930s, and by the late 1980s, the existing pond was constructed. An air force complex was constructed approximately 1,000 feet southwest of the pond area in the 1950s.

The Subject Property was identified in numerous regulatory databases related to historic and current uses including Leak sites, spills, Resource Conservation Recovery Act (RCRA) hazardous waste generators, construction stormwater permits, and air emissions permits. Although the database report identified these listings for the Subject Property, a majority were located greater than 1,000 feet from the Subject Property areas with a select few located as close as 500 feet to the Subject Property areas.

Twelve regulated spills associated with the DLH were also identified as either unlocatable or as within the DLH property in the database reports. Although the exact location of these spills are unknown, it is not likely that all of these releases have affected the Subject Property. Given the use of the Taxiway A Reconstruction Area and surrounding area, it is likely that some spills related to fueling activities have occurred on or adjacent to the Taxiway A Reconstruction Area. Therefore, the previous releases with limited location information are considered a **CREC** for the Subject Property.

The remaining facilities included in the database report are unlikely to have current or former releases of hazardous substances or petroleum products with the potential to migrate to the Subject Property based on a variety of factors including, but not limited to: the overall setting in which the Subject Property is located, potential depth to groundwater and assumed groundwater flow direction, existing or past uses of the surrounding properties, the potential migration distance of hazardous substances and/or petroleum products in the area, and distance from the Subject Property.

The DLH includes the base of the Minnesota Air National Guards (ANG's) 148th Fighter Wing (FW). The 148th FW facilities are located on leased properties at several locations in the vicinity of the main east-west runway at the DLH and the main base is located on the eastern side of the DLH. The 148th FW base houses aircraft, vehicles, and equipment. Current and past operations at the base have involved the use of products such as fuels, oils, lubricants, paints, paint thinners, solvents, and aqueous film forming foam (AFFF). Based on a review of the 2019 and 2025 Five-Year Review Reports, the operable units (OUs) associated with the 148th FW base are not considered a REC for the Subject Property.

A base-wide per- and polyfluoroalkyl substances (PFAS) Remedial Investigation (RI) is currently on-going at the DLH as the Minnesota ANG is evaluating PFAS impacts through a similar process used under the Installation Restoration Program (IRP) and consistent with the provisions of Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), as amended. Based on a review of the interim results provided by the Minnesota ANG, several detections of perfluorooctanoic acid (PFOA) and perfluorodecanoic acid (PFDA) exceeding their respective Minnesota Pollution Control Agency (MPCA) Commercial/Industrial Soil Reference Values (ISRVs) and/or Residential/Recreational SRVs (RSRVs) were located either within or adjacent to the Taxiway

A Reconstruction Area and Northern Stormwater Pond Dredge Area and are considered a **REC** for the Subject Property.

Conclusions

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-21 of the property associated with the Taxiway A Reconstruction – Phase 7 project at the Duluth International Airport in Duluth, St. Louis County, Minnesota, the Subject Property. Any exceptions to, or deletions from, this practice are described in **Sections 1.4** and **8.0** of this report. This assessment has revealed the following RECs and CRECs in connection with the Subject Property.

- Detections of PFAS compounds exceeding their respective MPCA ISRVs and/or RSRVs at or adjacent to the Taxiway A Reconstruction Area and Northern Stormwater Pond Dredge Area; **REC**
- Previous spills with limited location information; **CREC**.

Phase I Environmental Site Assessment

Taxiway A Reconstruction - Phase 7

Prepared for the Duluth Airport Authority

1 Introduction

Short Elliott Hendrickson Inc. (SEH) was retained by the Duluth Airport Authority (DAA) to conduct a Phase I Environmental Site Assessment (ESA) of the project areas associated with the proposed Taxiway A Reconstruction – Phase 7 project located at the Duluth International Airport (DLH) in Duluth, St. Louis County, Minnesota (herein referred to as "Subject Property"). The proposed project includes three project areas that are identified as the Taxiway A Reconstruction Area, the Terminal Stormwater Pond Expansion Area, and the Northern Stormwater Pond Dredge area. These project areas are all separated and are generally located in the western, southeastern, and northern parts of the DLH, respectively.

The Subject Property encompasses portions of St. Louis County parcel identification numbers (PINs) 010-2747-00160, 010-2747-00210, 010-2747-00220, 280-0031-00455, 280-0031-00456, 395-0010-00330, 395-0010-00348, 395-0010-00349, 395-0010-00350, and 395-0010-00550. The location of the Subject Property is depicted on **Figure 1.**

Taxiway A is the parallel taxiway for the main runway (Runway 9/27) serving DLH. The existing Taxiway A is approximately 10,700 feet in length and the reconstruction is proposed to be completed in nine phases. Phase 7 of the Taxiway A Reconstruction project, consists of an approximately 2,400-foot-long portion of the taxiway at its western end.

The Terminal Stormwater Pond Expansion Area is located southeast of the terminal building serving DLH. The existing pond is located directly east of the southeastern corner of the large surface parking lot south of the terminal building. The Terminal Stormwater Pond Expansion Area is approximately 25,000 square feet in size and will expand the footprint of the existing stormwater pond to the west.

The Northern Stormwater Pond Dredge Area is located north of the airfield at the end of Warhawk Drive. The existing stormwater pond is located directly north of the end of Warhawk Drive and is accessed by a gravel access road. The Northern Stormwater Pond Dredge will consist of the removal of approximately 1,000 cubic yards of material from the existing pond to restore the storage capacity of the pond. The pond footprint will not be expanded.

The proposed projects are described further in **Section 1.1** and the project areas are shown on **Figure 2**.

1.1 Background and Proposed Projects Scope of Work

1.1.1 Taxiway A Reconstruction – Phase 7

The overall reconstruction project includes realignment of the taxiway in the same general area as the existing Taxiway A. The Phase 7 project will also include the reconstruction and realignment of Taxiway A1 and Taxiway A2, which join Runway 9/27 with Taxiway A to meet current Federal Aviation Administration (FAA) design standards, which include having a right-angle intersection with the runway.

The proposed project scope of work includes removal of existing airfield pavements, completion of a soil correction below the proposed taxiway and connection pavement for placement of non-frost susceptible soil, concrete taxiway pavement installation, asphalt shoulder pavement construction, and storm sewer infrastructure and drainage improvements. Taxiway edge lighting, airfield signage, related airfield electrical circuits and turf establishment will also be completed with this project.

1.1.2 Terminal Stormwater Pond Expansion Area

The Terminal Stormwater Pond Expansion scope of work includes expanding the current pond footprint to the west approximately 80 feet. The project will also include regrading of the pond base sidewalls, placement of perforated drain tile and synthetic pond liner, and resetting of the existing riprap.

1.1.3 Northern Stormwater Pond Dredge Area

Additional stormwater capacity is needed at the stormwater pond located to the north of the active airfield. The existing pond is located north of Warhawk Drive and is accessed by a gravel road that runs north from Warhawk Drive. The southern portion of the pond will be dredged to restore required stormwater capacity. The dredge will consist of the removal of up to 3 feet of sediment from the southern portion of the existing pond.

1.2 Purpose

A SEH environmental professional completed the Phase I ESA in general accordance with ASTM International (ASTM) Practice E1527-21. This report was also completed in general accordance with the standards and practices established by the United States Environmental Protection Agency (EPA) for conducting all appropriate inquiries (AAI) and is intended to permit the user to satisfy certain landowner liability protections (LLPs) under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). The purpose of the Phase I ESA is to identify, to the extent feasible pursuant to the processes described in ASTM Practice E1527-21 and in a manner consistent with good commercial or customary practice, Recognized Environmental Conditions (RECs), Controlled RECs (CRECs) and Historical RECs (HRECs) in connection with the Subject Property.

By ASTM definition, **REC** means " (1) the presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the Subject Property under conditions that pose a material threat of a future release to the environment." ***De minimis*** conditions are not recognized environmental conditions.

The term **HREC** is defined by ASTM to mean "a previous release of hazardous substances or petroleum products affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by a regulatory authority or authorities without subjecting the property to any controls (for example, activity and use limitations or other property use limitations)."

The term **CREC** is defined by ASTM to mean "a recognized environmental condition affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, activity and use limitations or other property use limitations)."

The ASTM Practice E1527-21 defines migration as the "movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface." Therefore, migration of soil vapor has been evaluated in determining RECs, HRECs, and CRECs for the Subject Property.

This Phase I ESA is being completed for the purpose of enrolling the proposed project into the Minnesota Pollution Control Agency (MPCA) Voluntary Brownfields Program.

1.3 Scope of Services

The Phase I ESA consists of the following four general tasks:

- **Records Review** – The purpose of the records review is to obtain and review reasonably ascertainable records from standard sources (including government records, physical setting sources, and historical use records) to assist in identifying RECs, HRECs and/or CRECs (all referred to as RECs in this section) in connection with the Subject Property. Publicly-available federal, tribal, state, county and/or city records are reviewed as appropriate to determine if the property has had a history of spills, leaks, hazardous waste storage, regulatory compliance and improper waste disposal practices. Reasonably ascertainable standard historical sources are reviewed as necessary to identify prior uses of the property from the time the property was first developed or 1940, whichever is earlier. Significant data gaps of greater than 5 years in property historical information are identified and discussed.
- **Site Reconnaissance** – The objective of the site reconnaissance is to observe the Subject Property to obtain information indicating the likelihood of RECs in connection with the Subject Property. As part of the site reconnaissance, SEH observes the property and structures, if any, located on the property for indications of RECs to the extent not obstructed by thick vegetation, bodies of water, stored materials or product, equipment, or other obstacles. Potential environmental concerns on the Subject Property and observable environmental concerns on adjoining properties that relate to improper waste storage and disposal, and hazardous materials are noted.
- **Interviews** – The purpose of conducting interviews is to obtain information indicating RECs in connection with the Subject Property. As appropriate, past and present owners, operators, employees and occupants of the facility, and government officials are interviewed regarding the property. If the Subject Property is abandoned, one or more owners or occupants of neighboring properties are interviewed.
- **Technical Report** – SEH prepares the technical report summarizing the compiled information, and offers findings, opinions and conclusions based on the available data. If significant data gaps are identified, they are discussed in the report. RECs, if any, identified

during performance of the Phase I ESA are described in the report. The report also includes SEH's opinion of the potential impact of each REC, if RECs are identified.

For the tasks listed above, records reviewed will be limited to information that is publicly available, obtainable from its source within reasonable time and cost constraints, is practically reviewable, and determined by the environmental professional to be useful in evaluating the condition of the property.

The Phase I ESA was conducted in accordance with an Agreement between SEH and DAA dated June 26, 2025.

The Phase I ESA does not include testing or sampling of materials (for example, soil, water, air or building materials).

This Phase I ESA does not include evaluation of the following non-scope considerations specified in Section 13.1.5 of ASTM Practice E1527-21:

1. Asbestos-containing building materials unrelated to releases to the environment;
2. Biological agents;
3. Cultural and historic resources;
4. Ecological resources;
5. Endangered species;
6. Health and safety;
7. Indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment;
8. Industrial hygiene;
9. Lead-based paint unrelated to releases into the environment;
10. Lead in drinking water;
11. Mold or microbial growth conditions;
12. Polychlorinated biphenyl- (PCB-) containing building materials
13. Naturally occurring radon;
14. Regulatory compliance;
15. Substances not defined as hazardous substances, including some substances generally referred to as emerging contaminants; and
16. Wetlands.

1.4 Significant Assumptions

The following significant assumption has been incorporated into this report:

- Groundwater flow in the northern half of the DLH is expected to flow to the north, while groundwater flow in the southern half of the DLH is expected to flow to the south (EMR, Inc. [EMR], 2004).

1.5 Limitations and Exceptions

SEH was limited in conducting this Phase I ESA by the following:

- MPCA files for SA0020205, SA0020197, and LS0010249 were not available for review by the publication of this report.

- Interviews with all past and current owners of parcels within the Subject Property were not within the scope of this Phase I ESA.
- Information for the Subject Property was not identified between 1939 and 1948, between 1953 and 1961, between 1961 and 1969, and between 1981 and 1986.

SEH has considered the significance of the data gaps in affecting our ability to identify RECs for the Subject Property, and if identified, significant data gaps are discussed herein.

1.6 Special Terms and Conditions

SEH performed the Phase I ESA in general accordance with ASTM Practice E1527-21 and the Agreement between SEH and DAA. Performance of the Phase I ESA in general accordance with ASTM Practice E1527-21 is intended to reduce, but not eliminate, uncertainty regarding the existence of RECs, CRECs or HRECs in connection with the Subject Property.

Reasonably ascertainable, data was obtained and reviewed; however, the accuracy of the collected data is not the responsibility of SEH. Information provided to SEH by client representatives and site contacts has been accepted in good faith and is assumed to be accurate unless written documentation, available within the scope of this Phase I ESA, or visual observations contradicted it.

The Phase I ESA is not a comprehensive site characterization and should not be construed as such. The findings and conclusions of the Phase I ESA are based on information collected and observed at the time of the Phase I ESA and are not scientific certainties, but probabilities based on professional judgment regarding the significance and accuracy of the collected data. Because professional judgments incorporated into the report are based on limited evidence, there is inherent uncertainty in the conclusions drawn and reported. The client has determined that the level of effort and corresponding degree of uncertainty are acceptable for the client's purpose. The Phase I ESA may not include all environmental conditions that can materially impact the property and a finding of no RECs, CRECs, or HRECs is not a warranty or guarantee that a property remains free from contamination.

Laws and regulations, if referenced in this report, are provided for information purposes and should not be construed as legal opinion or recommendation.

1.7 User Reliance

The Phase I ESA and all reports, verbal and written, are solely for the use of DAA. Any third party may have different interests, purposes, and motives than DAA with regard to this assessment and report. Any reliance on the Phase I ESA by any other party shall be at such party's sole risk, unless that party has written authorization from SEH and DAA and is a party to the Agreement between SEH and DAA.

2 Subject Property Description

Subject Property Location	Taxiway A Reconstruction Area, the Terminal Stormwater Pond Expansion Area, and the Northern Stormwater Pond Dredge Area are generally located in the western, southeastern, and northern parts of the DLH respectively. (The extent of the project areas are depicted on **Figures 2** and **3**).
City, County, State	Duluth, St. Louis County, Minnesota
Parcel ID	Portions of PINS 010-2747-00160, 010-2747-00210, 010-2747-00220, 280-0031-00455, 280-0031-00456, 395-0010-00330, 395-0010-00348, 395-0010-00349, 395-0010-00350, and 395-0010-00550
Owner	City of Duluth
Subject Property Size	The Taxiway A Reconstruction - Phase 7 project area extends approximately 2,400 lineal feet. The Terminal Stormwater Pond Expansion project is approximately 25,000 square feet in size. The Northern Stormwater Pond Dredge project is to remove approximately 1,000 cubic yards of material.
Subject Property Township, Range, and Section	Township 50 North, Range 15 West, Sections 1, 2, and 3
Latitude/Longitude	46.840032; -92.198846 (approximate center of Subject Property)
Improvements	The Subject Property is developed with aircraft pavements, stormwater ponds , and maintained greenspace.
Subject Property Use	Commercial air traffic.

The location of the Subject Property is depicted on **Figure 1** and the approximate Subject Property boundary and features are shown on **Figure 2**.

3 User Provided Information

As specified under the ASTM standard, certain responsibilities generally lie with the user of this Phase I ESA. The user is the party seeking to use ASTM Practice E1527-21 to perform a Phase I ESA of a property. The user may include a purchaser of property, a potential tenant of property, an owner of property, a lender, or a property manager. For purposes of this Phase I ESA, the user is Duluth Airport Authority.

Information provided by the user is accepted in good faith and is assumed to be accurate and complete.

3.1 Title Records, Environmental Liens or Activity and Use Limitations

One of the user's responsibilities is to review land title records and judicial records for Environmental Liens and Activity Use Limitations (AULs). Environmental Liens and AULs can indicate a past or present release on the Subject Property. An Environmental Lien is a charge,

security, or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products upon a property, including (but not limited to) liens imposed pursuant to CERCLA 42 U.S.C. §§9607(1) & 9607(r) and similar state or local laws. AULs are legal or physical restrictions or limitations on the use of, or access to a site or facility intended to limit potential exposure to hazardous substances or petroleum products or prevent certain activities that could interfere with the effectiveness of a response action.

The user did not provide land title records for the Subject Property. We assume the user is evaluating this information outside of this Phase I ESA.

SEH reviewed the MPCA's online registry of institutional controls to determine if AULs are associated with the Subject Property. In addition, SEH reviewed the regulatory database report provided by Environmental Risk Information Services (ERIS), which included a search for facilities with federal and state institutional controls and federal engineering controls. The Subject Property was not identified in the institutional or engineering controls databases.

3.2 User Questionnaire

As part of the Phase I ESA, SEH requested the user provide a completed user questionnaire providing information regarding environmental liens, specialized knowledge, relationship of purchase price to fair market value, commonly known or reasonably ascertainable information, and obvious indicators of contamination.

The questionnaire completed by the DAA is included as **Appendix A**.

3.2.1 Environmental Cleanup Liens and AULs

The user indicated they are not aware of environmental cleanup liens or AULs associated with the Subject Property.

3.2.2 Specialized Knowledge

The user did not have specialized knowledge or experience related to the property or nearby properties.

3.2.3 Relationship of Purchase Price to Fair Market Value

Because the Subject Property is not being sold, the fair market value has not been established.

3.2.4 Commonly Known or Reasonably Ascertainable Information

The user indicated that previous investigations have been completed at the project site. See **Section 4.2.3** for a summary of the previously completed investigations.

3.2.5 Obvious Indicators of Contamination

The user indicated that the site was previously investigated for the presence of per- and polyfluoroalkyl substances (PFAS) in soils and that previously completed investigations have identified the presence of soil contamination. See **Section 4.2.3** for a summary of the previously completed investigations.

3.3 Reason for Performing the Phase I ESA

The Phase I ESA is being performed to identify, to the extent feasible pursuant to the processes described in ASTM Practice E1527-21 and in a manner consistent with good commercial and customary practice, RECs, CRECs and HRECs in connection with the Subject Property. We further understand the DAA intends to enroll the Taxiway A Reconstruction – Phase 7 project into the MPCA Voluntary Brownfields Program. We assume the purpose of the Phase I ESA is to qualify for a landowner liability protection to CERCLA liability.

4 Records Review

The records review was performed to obtain and review reasonably ascertainable records from standard sources (including government records, physical setting sources, and historical use records) to assist in identifying RECs in connection with the Subject Property. SEH reviewed historical records of aerial photographs, topographic maps, city directories and fire insurance maps where available and deemed necessary to minimize data gaps.

4.1 Physical Setting

SEH reviewed the physical setting of the Subject Property from various sources.

4.1.1 Topography

For the Taxiway A Reconstruction Area the paved portions of the Taxiway A are at a higher elevation than the remainder of the Subject Property, at an approximate elevation of 1420 feet above mean sea level (amsl). The taxiway gently slopes to the southeast and low areas are located north and south of the taxiway and between the taxiway and the runway, at an approximate elevation of 1412 feet amsl (MnTOPO, 2026).

For the Terminal Stormwater Pond Expansion Area the existing stormwater pond is located in a generally flat portion of the Subject Property, at an approximate elevation of 1375 feet amsl. The existing pond overflows to the east and drains to the southeast towards a low spot at an approximate elevation of 1370 feet amsl (MnTOPO, 2026).

For the Northern Stormwater Pond Dredge Area the existing stormwater pond is located in a low lying portion of the Subject Property, at an approximate elevation of 1395 feet amsl. The existing pond drains to the west and follows the drainage channel that flows northwest (MnTOPO, 2026).

4.1.2 Surficial Soils

Published geology indicates native deposits in this area are glacial lake deposits of the Cromwell Formation of the Wrenshall Member of the Michigan Sub-episode and consist of brown silt and clay with minor sand (Minnesota Geological Survey [MGS], 2009).

4.1.3 Bedrock Geology

The uppermost bedrock unit is the Gabbroic Zone of the Duluth Complex at approximately 1320 to 1370 feet amsl or around 50 to 100 feet below ground surface (bgs). The Gabbroic zone of the Duluth Complex is described as medium-grained, intergranular, foliated and locally layered olivine oxide gabbro. The Gabbroic Zone of the Duluth Complex ranges from 2,300 to 5,000 feet thick (MGS, 2008).

4.1.4 Hydrogeology

According to the 2004 Site Research Report (EMR, 2004), the DLH is situated on a groundwater mound. Groundwater flow in the northern half of the DLH is to the north, while groundwater flow in the southern half of the DLH is to the south.

Depth to groundwater is variable across the DLH. Well records obtained through the Minnesota Department of Health's (MDH's) Minnesota Well Index (MWI) online mapping tool indicate groundwater in the southwestern portion of the DLH (near the Taxiway A Reconstruction Area) is at approximately 8 feet bgs (approximate elevation of 1403 feet amsl), and groundwater in the southeastern portion of the DLH (near the Terminal Pond Expansion portion of the Subject Property) is at approximately 10 feet bgs (approximate elevation of 1377 feet amsl). Standing water was observed in both the Terminal Stormwater Pond (approximate elevation of 1370 feet amsl) and North Stormwater Pond Dredge Area (approximate elevation of 1395 feet amsl) portions of the Subject Property during the site reconnaissance.

4.1.5 Water Wells and Wellhead Protection Areas

SEH reviewed the MDH's MWI online mapping tool to evaluate if wells were located on the Subject Property.

No wells were mapped on the Subject Property; however, one monitoring well was observed within the Terminal Stormwater Pond Expansion Area during the site reconnaissance. See **Section 5.2.8.3**.

According to the MPCA Petroleum Remediation Program (PRP) and MDH MWI online mapping programs, the Subject Property does not fall within a wellhead protection area.

4.2 Regulatory Records Review

SEH completed a standard environmental record search of available state and federal environmental databases. The search included review of a database report provided by a third party, as well as a search of additional state, county and/or federal database websites.

4.2.1 Environmental Database Report

ERIS performed an electronic database search of files from Federal and State environmental records databases within minimum search distances as specified in ASTM Practice E1527-21. A summary of all records retrieved by the search, the minimum search distances, and the date that source information was last updated is included in the environmental database report in **Appendix B**. A list of data sources is also provided in the report.

The environmental database report review did not include a comprehensive, exhaustive review of all records.

SEH reviewed the environmental database report to identify listings with documented or potential releases of hazardous substances or petroleum products that have the potential to impact the Subject Property. The following listings were identified in the environmental database report for further review.

The FINDS/FRS listing stands for Facility Index System/Facility Registry Service, which are EPA databases that consolidate facility information from various environmental regulatory programs.

These listings identify facilities that are regulated or tracked by environmental agencies, but do not necessarily indicate that any hazardous substance release or environmental concern has occurred. A FINDS/FRS listing is not considered a Recognized Environmental Condition (REC) because it simply reflects the facility's presence in regulatory databases, rather than documenting evidence of contamination or potential risk to human health or the environment.

4.2.1.1 Subject Property Listings (Taxiway A Reconstruction Area)

The Subject Property (Taxiway A Reconstruction Area) was included in the following databases.

Site Name	Database	Listing Description
Duluth International Airport/DLH - Duluth Intl (Multiple Name Variations)	- Formerly Used Defense Sites (FUDS) - Air Facility System (AFS) -Integrated Compliance Information System (ICIS) - Facility Registry Service/Facility Index (FINDS/FRS) - MPCA Agency Interests (MPCA AI) - MPCA Remediation Leak Sites (LST REM SITE) - Historical Leak Sites (HIST LEAKSITES) - Spills reported to the Pollution Control Agency (SPILLS) - Historic spills reported to the Pollution Control Agency (HIST SPL) - Emergency Response Notification System (ERNS) - RCRA Very Small Quantity Generators List (RCRA VSQG) - Delisted Storage Tanks (DELISTED TANK) -Underground Storage Tanks (UST) - MPCA Site Assessment and	The DLH property is listed under FUDS ID# E05MN0033, which encompasses a number of sites located throughout the DLH. FUDS are properties that the Department of Defense (DoD) once owned or used but no longer control. See **Section 4.2.3** for a review of the Subject Property in relation to the FUDS listing. The AFS/ICIS listings are related to permitted air emissions at the DLH. An air emissions listing only indicates that the DLH has or had a source of air pollution that requires a permit or registration from the state or federal agency. The listings do not imply that a release has occurred. Therefore, the listings are not considered a REC for the Subject Property. A total of 11 FINDS/FRS and 16 MPCA AI listings were identified in the database report for the DLH property. These listings identify facilities that are regulated or tracked by environmental agencies, but do not necessarily indicate that a release of hazardous substances or petroleum products has occurred; therefore, these listings are not considered a REC for the Subject Property. The LST REM SITE/HIST LEAKSITE listings are related to MPCA Leak Site LS0004479, which is located at the main terminal facility, approximately 7,500 feet east of the Taxiway A Reconstruction Area. Given the distance of this listing from the Subject Property, these listings are not considered a REC for the Subject Property. The following SPILLS/HIST SPILL/ERNS listings were identified in the Database report for the DLH property: - 100 gallons of aviation gas in June 1999 - 40 gallons of jet fuel in November 1998 - 40 gallons of jet fuel in January 1999 - 35 gallons of aviation gas in January 1999 - 90 gallons of jet fuel in November 2003 - 15 gallons of transformer oil in April 2020 The exact location of these releases was not specified; however, each release was contained,

	Emergency Response Sites (SITE ASSESSMENT)	cleaned, and has received regulatory closure. While it is not likely that all of these releases occurred within the Taxiway A Reconstruction Area, given the use of the Taxiway A Reconstruction Area and surrounding area, it is likely that some releases related to fueling activities have occurred on or adjacent to the Taxiway A Reconstruction Area. Therefore, the previous releases with limited location information are considered a **CREC** for the Subject Property. The database report identified two RCRA VSQG listings for the DLH property, the exact locations of these facilities within the overall DLH property was not specified; however, the only listed compliance monitoring and enforcement (violation) records consist of a letter of warning in May 2002. These listings do not indicate that a release of hazardous substances or petroleum products has occurred; therefore, these listings are not considered a REC for the Subject Property. The DELISTED TANK/UST listings identified 12 removed USTs ranging in size between 500 and 50,000 gallons. Contents included diesel, gasoline, fuel oil, and aviation gasoline. The exact location of the USTs were not specified; however, it is assumed that the USTs were located near operational areas of DLH and not within the Taxiway A Reconstruction Area. This listing is not considered a REC for the Subject Property. The SITE ASSESSMENT listing is associated with MPCA ID SA0000367. The exact location of this listing was not specified; however, details obtained through the MPCA WIMN dashboard indicate that no investigation/remedial actions were completed. The listing was opened and referred to the MPCA Petroleum Remediation program in June 2017. This listing is not considered a REC for the Subject Property.
Delta Airlines Inc. Duluth Ramp	- Aboveground Storage Tanks (AST)	The AST listing identified 2 active ASTs ranging in size between 1,000 and 6,650 gallons. Contents include gasoline blends and unspecified chemicals. The exact location of the ASTs are not specified; however, it is assumed that the ASTs are located near operational areas of DLH and not within the Taxiway A Reconstruction Area. This listing is not considered a REC for the Subject Property.
Duluth Internation Airport Block 3	- Petroleum Brownfields Program Sites (BROWNFIELDS) - Voluntary Investigation and Cleanup Program List (VIC)	This listing is related to MPCA ID VP15240 and is within the overall DLH property; however, it is located over 1,700 feet southeast of the Taxiway A Reconstruction Area. Given the distance of this listing from the Subject Property, these listings are not considered a REC for the Subject Property.

Former Fueling Station/ Duluth International Airport Maintenance Garage	- Delisted Leaking Storage Tanks (DELISTED LST) - LST REM SITE	This listing is related to MPCA IDs LS0003496, LS0020250, and LS0020226. These listings are within the overall DLH property; however, are located over 1,700 feet southeast of the Taxiway A Reconstruction Area. Given the distance of these listings from the Subject Property, these listings are not considered a REC for the Subject Property.
DAA Air National Gurad (ANG) Fire Station Phase 3	- MPCA AI - Permitted Solid Waste Facilities (SWF/LF)	These listings are associated with an MPCA Construction Stormwater Permit. These listings do not indicate that a release of hazardous substances or petroleum products has occurred; therefore, these listings are not considered a REC for the Subject Property.

4.2.1.2 Surrounding Listings (Taxiway A Reconstruction Area)

The remaining facilities included in the database for the Taxiway A Reconstruction Area are unlikely to have current or former releases of hazardous substances or petroleum products with the potential to migrate to the Subject Property based on a variety of factors including, but not limited to: the anticipated scope of work for the reconstruction project, the overall setting in which the Taxiway A Reconstruction Area is located, potential depth to groundwater and assumed groundwater flow direction, existing or past uses of the surrounding properties, the potential migration distance of hazardous substances and/or petroleum products in the area, and distance from the Subject Property.

4.2.1.3 Subject Property (Terminal Stormwater Pond Expansion Area) Listings

The Subject Property (Terminal Stormwater Pond Expansion Area) was included in the following databases.

Site Name	Database	Listing Description
Duluth International Airport	- FUDS	The DLH property is listed under FUDS ID# E05MN0033, which encompasses a number of sites located throughout the DLH. FUDS are properties that the Department of Defense (DoD) once owned or used but no longer control. See **Section 4.2.3** for a review of the Subject Property in relation to the FUDS listing.

4.2.1.4 Surrounding Listings (Terminal Stormwater Pond Expansion Area)

The following listings were identified in the environmental database report and required further review.

Site Name	Address	Database	Listing Description
Delta Global Services	4701 Airport Drive – Located approximately 1,000 feet northwest of the Subject Property	- RCRA Non-Generators (RCRA NON GEN)	This facility is located within the overall DLH property; however, the exact location was not specified. There are no compliance monitoring and enforcement (violation) records associated with this listing; therefore, this listing is not considered a REC for the Subject Property.

Duluth International Airport/DLH - Duluth Intl (Multiple Name Variations)	4701 Grinden Drive – Located adjacent to the northwest of the Terminal Stormwater Pond Expansion Area	- AFS - ICIS - FINDS/FRS - MPCA AI - LST REM SITE - HIST LEAKSITES - SPILLS - HIST SPL - ERNS - RCRA VSQG - DELISTED TANK - UST - SITE ASSESSMENT	The AFS/ICIS listing is related to permitted air emissions at the DLH. An air emissions listing only indicates that the DLH has or had a source of air pollution that requires a permit or registration from the state or federal agency. The listing does not imply that a release has occurred. Therefore, this listing is not considered a REC for the Subject Property. A total of 13 FINDS/FRS and 16 MPCA AI listings were identified in the database report for the DLH property. These listings identify facilities that are regulated or tracked by environmental agencies, but do not necessarily indicate that a release of hazardous substances or petroleum products has occurred; therefore, these listings are not considered a REC for the Subject Property. The DELISTED TANK/UST listings identified 12 removed USTs ranging in size between 500 and 50,000 gallons. Contents included diesel, gasoline, fuel oil, and aviation gasoline. The exact location of the USTs were not specified; however, it is assumed that the USTs were located near operational areas of DLH and not near the Terminal Stormwater Pond Expansion Area. This listing is not considered a REC for the Subject Property. The LST REM SITE/HIST LEAKSITE listings are related to MPCA Leak Site LS0004479, which is located at the main terminal gates, over 700 feet northwest of the Terminal Stormwater Pond Expansion Area. Given the distance of this listing from the Subject Property, this listing is not considered a REC for the Subject Property. The following SPILLS/HIST SPILL/ERNS listings were identified in the Database report for the Terminal Stormwater Pond Expansion Area: - 100 gallons of aviation gas in June 1999 - 40 gallons of jet fuel in November 1998 - 40 gallons of jet fuel in January 1999 - 35 gallons of aviation gas in January 1999 - 90 gallons of jet fuel in November 2003 - 15 gallons of transformer oil in April 2020 The exact location of these releases was not specified; however, each release was contained, cleaned, and has received regulatory closure. It is not likely that these releases occurred within the Terminal

Site Name	Address	Database	Listing Description
			Stormwater Pond Expansion Area given the use of the area and surrounding area. Therefore, these listings are not considered a REC for the Subject Property. The database report identified two RCRA VSQG listings for the DLH property, the exact locations of these facilities within the overall DLH property was not specified; however, the only listed compliance monitoring and enforcement (violation) records consist of a letter of warning in May 2002. These listings do not indicate that a release of hazardous substances or petroleum products has occurred; therefore, these listings are not considered a REC for the Subject Property. The SITE ASSESSMENT listing is associated with MPCA ID SA0000367. The exact location of this listing was not specified; however, details obtained through the MPCA WIMN dashboard indicate that no investigation/remedial actions were completed. The listing was opened and referred to the MPCA Petroleum Remediation program in June 2017. This listing is not considered a REC for the Subject Property.
Delta Airlines Inc. Duluth Ramp	4701 Grinden Drive – Located adjacent to the northwest of the Terminal Stormwater Pond Expansion Area	- AST	The AST listing identified 2 active ASTs ranging in size between 1,000 and 6,650 gallons. Contents include gasoline blends and unspecified chemicals. The exact location of the ASTs are not specified; however, it is assumed that the ASTs are located near operational areas of DLH and not near the Terminal Stormwater Pond Expansion Area. This listing is not considered a REC for the Subject Property.
Duluth International Airport Block 3	4701 Grinden Drive – Located adjacent to the northwest of the Terminal Stormwater Pond Expansion Area	- BROWNFIELDS - VIC	This listing is related to MPCA ID VP15240 and is within the overall DLH property; however, it is located approximately 6,000 feet west of the Terminal Stormwater Pond Expansion Area. Given the distance of this listing from the Subject Property, this listing is not considered a REC for the Subject Property.
Former Fueling Station/ Duluth International Airport Maintenance Garage	4701 Grinden Drive – Located adjacent to the northwest of the Terminal Stormwater Pond Expansion Area	- DELISTED LST - LST REM SITE - HIST LEAKSITE - FINDS/FRS	These listings are related to MPCA IDs LS0003496, LS0020250, and LS0020226. These listings are within the overall DLH property; however, are located over 3,000 feet west of the Terminal Stormwater Pond Expansion Area. Given the distance of these listings from the Subject Property, these listings are not considered a REC for the Subject Property.

Site Name	Address	Database	Listing Description
Case Power and Equipment	6501 Haines Road – Located adjacent to the southeast of the Terminal Stormwater Pond Expansion Area	- FINDS/FRS	FINDS/FRS listings identify facilities that are regulated or tracked by environmental agencies, but do not necessarily indicate that a release of hazardous substances or petroleum products has occurred; therefore, these listings are not considered a REC for the Subject Property.
Northwest Airlines Inc	4701 Grinden Drive – Located adjacent to the northwest of the Terminal Stormwater Pond Expansion Area	- FINDS/FRS - SPILLS - Toxics Release Inventory (TRI) Program (TRIS)	These listings are associated with a release of 300 gallons of aviation gas in October 1995. The exact location of this release was not specified; however, the release has received regulatory closure. It is not likely that these releases occurred within the Terminal Stormwater Pond Expansion Area given the use of the area and surrounding area. Therefore, these listings are not considered a REC for the Subject Property.
HK Enterprises Inc Hertz Syst	4701 Airport Drive – Located adjacent to the northwest of the Terminal Stormwater Pond Expansion Area	- FINDS/FRS	FINDS/FRS listings identify facilities that are regulated or tracked by environmental agencies, but do not necessarily indicate that a release of hazardous substances or petroleum products has occurred; therefore, these listings are not considered a REC for the Subject Property.
Delta Global Services	4701 Airport Drive – Located adjacent to the northwest of the Terminal Stormwater Pond Expansion Area	- FINDS/FRS	FINDS/FRS listings identify facilities that are regulated or tracked by environmental agencies, but do not necessarily indicate that a release of hazardous substances or petroleum products has occurred; therefore, these listings are not considered a REC for the Subject Property.
Avis Rent a Car	4701 Airport Road – Located adjacent to the northwest of the Terminal Stormwater Pond Expansion Area	- FINDS/FRS - HIST LEAKSITES - LST REM SITE - UST	These listings are related to MPCA ID LS0005937. This listing is within the overall DLH property; however, it is located over 5,700 feet west of the Terminal Stormwater Pond Expansion Area. Given the distance of these listings from the Subject Property, these listings are not considered a REC for the Subject Property.
Hallmark Business Connections/ Hallmark Parking Lot Reconstruction	4444 Haines Road – Located adjacent to the southeast of the Subject Property	- MPCA AI - RCRA NON-GEN	These listings are associated with the facilities handling of RCRA hazardous waste. There are no compliance monitoring and enforcement (violation) records associated with this listing; therefore, this listing is not considered a REC for the Subject Property.

The remaining facilities included in the database for the Terminal Stormwater Pond Expansion Area are unlikely to have current or former releases of hazardous substances or petroleum products with the potential to migrate to the Subject Property based on a variety of factors

including, but not limited to: the anticipated scope of work for the reconstruction project, the overall setting in which the Terminal Stormwater Pond Expansion Area is located, potential depth to groundwater and assumed groundwater flow direction, existing or past uses of the surrounding properties, the potential migration distance of hazardous substances and/or petroleum products in the area, and distance from the Subject Property.

4.2.1.5 Subject Property (Northern Stormwater Pond Dredge Area) Listings

The Subject Property (Northern Stormwater Pond Dredge Area) was included in the following databases.

Site Name	Database	Listing Description
Duluth International Airport/DLH - Duluth Intl (Multiple Name Variations)	- FUDS	The DLH property is listed under FUDS ID# E05MN0033, which encompasses a number of sites located throughout the DLH. FUDS are properties that the Department of Defense (DoD) once owned or used but no longer control. See **Section 4.2.3** for a review of the Subject Property in relation to the FUDS listing.

4.2.1.6 Surrounding Listings (Northern Stormwater Pond Dredge Area)

The following listings were identified in the environmental database report and required further review.

Site Name	Address	Database	Listing Description
MN Air National Guard Building 520	4619 Warhawk Drive – Located approximately 1,000 feet southwest of the Subject Property	- MPCA AI - HIST LEAKSITES - FINDS/FRS - LST REM SITE	These listings are related to MPCA ID#s LS0007944 and LS0007907. These listings are within the overall DLH property; however, are located over 1,500 feet southwest of the Northern Stormwater Pond Dredge Area. Given the distance of these listings from the Subject Property, these listings are not considered a REC for the Subject Property.

The remaining facilities included in the database for the Northern Stormwater Pond Dredge Area are unlikely to have current or former releases of hazardous substances or petroleum products with the potential to migrate to the Subject Property based on a variety of factors including, but not limited to: the anticipated scope of work for the reconstruction project, the overall setting in which the Northern Stormwater Pond Dredge Area is located, potential depth to groundwater and assumed groundwater flow direction, existing or past uses of the surrounding properties, the potential migration distance of hazardous substances and/or petroleum products in the area, and distance from the Subject Property.

4.2.1.7 Unplottable Sites – Taxiway A Reconstruction Area

The regulatory database report includes, if present, “unplottable” or unlocatable listings, which could not be specifically located because of poor address information or other limitations. A total of 30 unplottable listings are identified in the environmental database report.

SEH attempted to identify unplottable listings that were potentially located within or adjoining the Subject Property or could impact the Subject Property based on site name, address, and available resources. The focus of this search is placed on sites that may pose the greatest potential for environmental impacts to the Subject Property. It is not within the scope of this Phase I ESA to conduct an exhaustive investigation to verify the locations of all unplottable site listings.

The following unplottable listings appear to be associated with the Subject Property or have the potential to impact the Subject Property were identified.

Site Name	Address	Database	Listing Description
Duluth International Airport	Airport Road, Site 102	HIST SPL	On March 21, 1990, a release of 20 gallons of an unspecified petroleum product due to overfilling was reported. Cleanup activities were not described, and the spill was closed on January 1, 1996.
148th Fighter Group	Airport Duluth	HIST SPL	On March 21, 1990, a release of 20 gallons of an unspecified petroleum product due to overfilling was reported. Cleanup activities were not described, and the spill was closed on January 1, 1996.
Commercial	Duluth International Airport	HIST SPL	On December 19, 1998, a release of 30 gallons of a high-octane aviation gas during a fuel transfer was reported. The cleanup activities were not described, and the spill was closed on December 19, 1998.
National Guard Minnesota Air	Airport Duluth	HIST SPL	On November 22, 1989, a release of 1 pound of an unspecified substance was reported. The cause of the spill and the cleanup activities were not described, and the spill was closed on January 1, 1996.
Duluth International Airport	Gate 3	HIST SPL	On April 2, 2004, a release of 20 gallons of kerosene based jet fuel due to a broken line on a fuel truck was reported. The spill was contained and placed into containers for disposal. The spill was closed on April 2, 2004.
Duluth International Airport	Gate 1	HIST SPL	On June 18, 1997, a release of 100 gallons of jet fuel to a concrete apron due to a malfunctioning transfer valve was reported. The cleanup activities were not described, and the spill was closed on June 18, 1997.

Although the exact location of these spills are unknown, and it is not likely that all of these unplottable releases have affected the Subject Property, given the use of the Subject Property

and surrounding area, it is likely that some spills related to fueling activities have occurred on or adjacent to the Taxiway A Reconstruction Area. Therefore, the previous releases with limited location information are considered a **CREC** for the Subject Property.

4.2.1.8 Unplottable Sites – Terminal Stormwater Pond Expansion Area

The regulatory database report includes, if present, “unplottable” or unlocatable listings, which could not be specifically located because of poor address information or other limitations. A total of 38 unplottable listings are identified in the environmental database report.

SEH attempted to identify unplottable listings that were potentially located within or adjoining the Subject Property or could impact the Subject Property based on site name, address, and available resources. The focus of this search is placed on sites that may pose the greatest potential for environmental impacts to the Subject Property. It is not within the scope of this Phase I ESA to conduct an exhaustive investigation to verify the locations of all unplottable site listings.

Unplottable listings associated with the Terminal Stormwater Pond Expansion Area or with the potential to impact the Terminal Stormwater Pond Expansion Arae were not identified.

4.2.1.9 Unplottable Sites – Northern Stormwater Pond Dredge A

The regulatory database report includes, if present, “unplottable” or unlocatable listings, which could not be specifically located because of poor address information or other limitations. A total of one unplottable listings are identified in the environmental database report.

SEH attempted to identify unplottable listings that were potentially located within or adjoining the Subject Property or could impact the Subject Property based on site name, address, and available resources. The focus of this search is placed on sites that may pose the greatest potential for environmental impacts to the Subject Property. It is not within the scope of this Phase I ESA to conduct an exhaustive investigation to verify the locations of all unplottable site listings.

Unplottable listings associated with the Northern Stormwater Pond Dredge Area or with the potential to impact the Northern Stormwater Pond Dredge Area were not identified.

4.2.2 Additional Record Sources

SEH reviewed additional environmental record sources, including the MPCA *What’s in My Neighborhood* interactive mapping program, Minnesota Department of Agriculture (MDA) County Spill Records, the MDA *What’s in My Neighborhood* interactive mapping program, the MPCA *Petroleum Remediation Program Maps Online, MPCA Landfill Cleanup Act Participants,* MPCA *Minnesota Groundwater Contamination Atlas,* the MPCA *VIC Site Online Search for Sites with Institutional Controls*, the MPCA Spills database, the *National Pipeline Mapping System, and the US Air Force Civil Engineer Center (AFCEC) Administrative Record Search*.

The following listings were identified for further review.

Name	Address	Database	Listing Description
Duluth International Airport - Site 102	Duluth International Airport	MPCA WIMN	This facility includes MPCA ID#s SA0001662, VP14730, VP14731, and VP21050. The MPCA digital files for these listings indicate the site is located approximately 3,000 feet southeast of the Taxiway A Reconstruction Area. These listings do not represent a REC for the Subject Property.
Defense Revitalization And Marketing	4997 Airport Rd	MPCA WIMN	This facility includes MPCA ID# LS0010249. The MPCA digital files for this list was not received as of the issuance of this report; however, the WIMN dashboard indicates the site is located approximately 500 feet southeast of the Taxiway A Reconstruction Area. A release of fuel oil occurred in June 1997. No groundwater contamination occurred as a result of the release. This listing does not represent a REC for the Subject Property.
Duluth International Airport USAF	Duluth International Airport	MPCA WIMN	This facility includes MPCA ID#s LS0004092 and LS0006647. The MPCA digital files for these listings indicate the site is located over 3,000 feet west of the Terminal Pond Expansion portion of the Subject Property. These listings do not represent a REC for the Subject Property.
-	-	MDA WIMN	This facility includes MDA ID# FY82I097. The MDA digital file indicates this listing is related to the disposal of various waste materials during the closure of a structure located within the air force portion of the DLH property, located over 2,500 feet north of the Terminal Pond Expansion portion of the Subject Property. Documentation for this listing consisted of an inventory of various wastes. No investigative or remedial activities were completed. This listing does not represent a REC for the Subject Property.

4.2.3 Regulatory File Requests

Some database listings warranted an additional file review to evaluate if RECs, CRECs, or HRECs are present at the Subject Property in connection with the listing.

The following regulatory files were requested for review. Relevant information is presented in below and copies of reviewed reports are attached as **Appendix C**.

Duluth International Airport - 4701 Grinden Drive (FUDS ID# E05MN0033)

The DLH was formerly jointly operated by the United State Air Force (USAF), the Minnesota ANG, and the City of Duluth. Following World War II, the USAF began constructing facilities south of Runway 9/27 on land leases from the City of Duluth. The USAF ceased operations at the DLH in 1982; however, the USAF continues to have ongoing responsibilities for managing the restoration of sites they operated at the airfield through the FUDS program. Several areas of concern (AOCs), as designated by the FUDS program, are located throughout the DLH. A Site Research Report (EMR, 2004) completed for the USACE identified various ANG operational areas throughout the DLH, including a potential former salvage yard located approximately 500 feet southeast of the Taxiway A Reconstruction Area. Although the area was identified in the Site Research Report, no further details were provided and the area was not designated as a proposed additional FUDS site. The remaining existing/former site features identified in association with the FUDs listing are unlikely to have impacted the Subject Property. A copy of the 2004 Site Research Report is included as **Appendix C**.

Duluth Air Force Base – DLH (Various Listings)

Although the site was listed under numerous listings across several regulatory programs including Superfund, CERCLIS, and RCRA Remediation, the MPCA's *Minnesota Groundwater Contamination Atlas* identifies the site as the Duluth Airforce Base (MPCA ID# SR0000095). The Duluth Airforce Base listing encompasses multiple Installation Restoration Program (IRP) Sites throughout the DLH and surrounding area. Each IRP Site was identified through former military uses and are categorized as storage sites, disposal sites, radiation sites, and miscellaneous sites. Information associated with the Duluth Air Force Base site was available for review through the *AFCEC Administrative Record Search,* with the most recent site wide publication being the *Installation Restoration Program, Final, Five-Year Review Report* (MN ANG, 2025).

The DLH includes the base of the Minnesota ANG's 148th Fighter Wing (FW). The 148th FW facilities are located on leased properties at several locations in the vicinity of the main east-west runway at the DLH and the main base is located on the eastern side of the DLH. The 148th FW base houses aircraft, vehicles, and equipment. Current and past operations at the base have involved the use of products such as fuels, oils, lubricants, paints, paint thinners, solvents, and aqueous film forming foam (AFFF). Based on a review of the 2019 and 2025 Five-Year Review Reports, all Operable Units (OU's) associated with the listings are greater than 700 feet from the Subject Property, with exception of IRP 22 which is located approximately 500 feet southeast of the Taxiway A Reconstruction Area. IRP Site 22 consists of two septic tank systems. Both systems have been abandoned and previously received sanitary wastewater from the former building's toilets, sinks, and wash basins. Several contaminants including toluene, total petroleum hydrocarbons (TPHs), and metals were detected in soil samples collected at the site at depths ranging from 3 to 6 feet bgs, however, a risk assessment completed for the site concluded that the contaminants detected do not pose a current or future threat to human health or the environment. This determination was based on the fact that it is unlikely that base personnel, local residents, or wildlife will ever be exposed to residual soil contamination at IRP Site 22 due to the subsurface nature of the contamination, the industrial nature of the site, the restricted access to the site, and the lack of plans for current or future excavation activities at the site. IRP Site 22 was deemed as protective of human health and the environment in the 2019 Five Year Report. IRP Site 22 is not considered a REC for the Subject Property. The 2025 Final Five-Year Review Report is included as **Appendix C.**

Minnesota ANG PFAS Investigation

A base-wide Per- and Polyfluoroalkyl Substances (PFAS) Remedial Investigation (RI) is currently on-going at the DLH. The Minnesota ANG currently considers PFAS to be an emerging contaminant and are evaluating it through a similar process used under the IRP and consistent with the provisions of CERCLA, as amended.

A formal report for the ongoing PFAS investigations has not been issued; however, the Minnesota ANG has provided interim results and figures associated with the investigation.

- *Taxiway A Reconstruction Area:* Four soil sample locations (BGSL-09 through BGSL-12) are located within the Taxiway A Reconstruction Area. Detections of various PFAS compounds were reported above their respective reporting limits with detections of perfluorooctanoic acid (PFOA - up to 0.00046 milligrams per kilogram [mg/kg]) exceeding the MPCA Residential/Recreational Soil Reference Value (RSRV – 0.00036 mg/kg), and perfluorodecanoic acid (PFDA – up to 0.000085 mg/kg) exceeding the RSRV (0.000027 mg/kg) in sample BGSL-11 at 0 to 0.5 feet bgs. All soil sample analytical results were below their respective Commercial/Industrial SRVs (ISRV).

- Northern Stormwater Pond Dredge Area: Two surficial sediment sample locations (SWSD-01 and SWSD-02) are located adjacent to the Northern Stormwater Pond Dredge Area portion of the Subject Property. Detections of various PFAS compounds were reported above their respective reporting limits with detections of PFOA (up to 0.096 mg/kg) exceeding the MPCA ISRV (0.002 mg/kg), and PFDA (up to 0.00059 mg/kg) exceeding the ISRV (0.00036 mg/kg) in both samples.

- Terminal Stormwater Pond Expansion Area: One groundwater monitoring well (BBW-MW08) is located within the Terminal Stormwater Pond Expansion Area; however, analytical results for this well were not available for review as of the issuance of this report.

Based on a review of the interim results, the detections of PFAS compounds exceeding their respective MPCA ISRVs at or adjacent to the Taxiway A Reconstruction Area and Northern Stormwater Pond Dredge Area are considered a **REC** for the Subject Property. Applicable MN ANG sample locations are depicted on **Figure 3**. Please note, that information provided by the Minnesota ANG regarding the on-going site-wide PFAS investigation is interim and has not been finalized. Figures showing select sample locations, as provided by the Minnesota ANG is included in **Appendix C**. The analytical summaries provided were in excel format and therefore, are not included as an appendix to this report, but are available upon request.

4.2.4 Prior Assessments

As part of this Phase I ESA, SEH requested the client provide copies of previous environmental reports for the Subject Property.

The Client did not provide previous investigation reports for the Subject Property.

4.3 Historical Use of the Subject Property and Surrounding Properties

A historical review of the Subject Property and surrounding area was conducted to identify obvious previous uses of the Subject Property and surrounding area in order to help assess whether past uses may have led to RECs, CRECs or HRECs in connection with the Subject Property. According to ASTM Practice E1527-21 standard, the uses of the property shall be identified “at five-year intervals back to property’s first developed use or back to 1940 (whichever is earlier)”. The historical review was completed by examining historic aerial photographs, topographic maps, city directories and fire insurance maps where available.

4.3.1 Sources

The following sources were used to compile the history of the Subject Property and adjacent properties.

4.3.1.1 Aerial Photographs

Reasonably ascertainable historical aerial photographs showing the project corridor and surrounding areas were obtained for review from the years 1939, 1948, 1951, 1953, 1961, 1972, 1978, 1981, 1989, 1991, 1997, 2003, 2008, 2013, 2017, 2021, and 2015. Due to the scale and quality of some of the photographs, it is difficult to determine minor activities that may have occurred on the project corridor. Copies of the photographs reviewed are included as **Appendix D**.

4.3.1.2 Topographic Maps

The following historical maps were obtained and reviewed:

- USGS, 1895 and 1953, *Duluth, MN*, 15 Minute Topographic Map.
- USGS, 1953, 1969, 1975, 1981, 1993, 2013, 2016, and 2019, *Duluth Heights, MN*, 7.5 Minute Topographic Map.

Copies of topographic maps reviewed are included as **Appendix E**.

4.3.1.3 Fire Insurance Maps

Sanborn, Rascher, Fire Underwriter Bureau and other fire Insurance maps consist of a uniform series of large-scale detailed maps, dating from 1867 through 1969 and depict the commercial,

industrial, and residential sections of urban areas. The maps were designed to assist fire insurance agents in determining the degree of hazard associated with a particular property. These maps illustrate, in outline form, structural details such as the size, shape, and construction and building material of dwellings, commercial buildings, and factories.

According to Historical Information Gatherers (HIG), fire insurance map coverage is not available for the Subject Property (see **Appendix F**).

4.3.1.4 City Directories

City directories provide a means to investigate the past use of a site by reviewing information for a specific address in incorporated areas. City directories were obtained and reviewed for the Subject Property for the following streets and years:

- Lavaque Road: 1981, 1986, 1991, 1996, 2001, 2006, 2009, 2013, 2018, and 2023
- Haines Road: 1981, 1986, 1991, 1996, 2001, 2006, 2009, 2013, 2018, and 2023
- Grinden Drive: 2001, 2006, 2009, 2013, 2018, and 2023

Significant information is incorporated into **Section 4.3.2**. Copies of city directories are included as **Appendix G.**

4.3.2 History of the Subject Property and Surrounding Properties

The following history of the Subject Property and surrounding properties was compiled from information contained in the resources listed in **Section 4.3.1**.

Taxiway A Reconstruction Area

From	To	Past Use and History	Source
1895	1948	The Subject Property was undeveloped and marked as a swamp on topographic maps from 1895. The Subject Property was bisected by Lavaque Road, running north/south, through the center of the site. By 1935 the Subject Property and adjacent properties were developed as farm land. A larger highway is constructed to the south of the adjacent properties.	Historical Aerials, Topographic Maps
1951	1953	The eastern portion of the Subject Property and the adjoining properties to the east and northeast were developed as part of the Duluth Municipal Airport in the early 1950s. The main runway sat just directly to the northeast of the Subject Property, with the end of the taxiway crossing the eastern portion of the Subject Property. The remaining western portion of the Subject Property and adjacent properties remained vacant and vegetated, with the north/south road still bisecting the area.	Historical Aerials, Topographic Maps

From	To	Past Use and History	Source
1951	1961	The eastern portion of the Subject Property and the adjoining properties to the east and northeast were developed as part of the Duluth Municipal Airport in the early 1950s. The main runway sat just directly to the northeast of the Subject Property, with the end of the taxiway crossing the eastern portion of the Subject Property. A drainage ditch ran from the end of the runway across the eastern portion of the Subject Property. The remaining western portion of the Subject Property and adjacent properties remained vacant, with the north/south road still bisecting the area.	Historical Aerials, Topographic Maps
1969	1981	With the expansion of the airport, now renamed to the Duluth International Airport, the runway to the north of the Subject Property was extended to the west. The Subject Property was cleared and graded to allow for the new runway alignment. The north/south road that bisected the site previously was removed. The adjacent properties to the north and west were also cleared and graded as part of the active airfield. The adjacent properties to the south remained vegetated, with the north/south road still bisecting that area.	Historical Aerials, Topographic Maps
1989	Present	By the late 1980s Taxiway A was extended through Subject Property. Taking the end of Taxiway A from the eastern portion of the Subject Property to the end of the runway just north of the western portion of the Subject Property. The adjacent properties remained the same. With the runway located north of the Subject Property, cleared airspace area to the east and west of the Subject property, and vegetated areas to the south of the Subject property.	Historical Aerials, Topographic Maps, City Directories

Terminal Stormwater Pond Expansion Area

From	To	Past Use and History	Source
1895	1939	The Subject Property was undeveloped and marked as a swamp on topographic maps from 1895. The Subject Property was adjoined to the west by a road running north/south. By 1939 the Subject Property and adjacent properties to the north, west, and east were cleared. The adjacent properties to the south remained vacant and vegetated.	Historical Aerials, Topographic Maps
1948	1972	An additional road was constructed directly to the south of the Subject Property by the late 1940s. The Subject Property remained cleared and vacant. The area to the northwest was developed as the Duluth Municipal Airport with runways and taxiways present by 1948. Adjacent properties to the east and south remained vacant.	Historical Aerials, Topographic Maps

From	To	Past Use and History	Source
1975	2008	In the mid-1970s the Duluth International Airport terminal was built in the area to the northwest of the Subject Property. As part of the terminal construction the terminal access road, Grinden Drive, was built along the western and southern edge of the Subject Property. The Subject Property remained cleared and vacant. Maintenance vehicles and outdoor storage can be seen on aerial photographs of the adjacent property to the west. Adjacent properties to the east and south remained vacant. Commercial buildings were constructed in the area to the southeast of the Subject Property.	Historical Aerials, Topographic Maps, City Directories
2013	Present	With the reconstruction of the terminal building in the early 2010s, and new surface parking lot was built on the adjacent property to the west of the Subject Property. The maintenance area was relocated with the construction of the new parking lot. The Subject Property remained cleared and vacant. Adjacent properties to the east and south remained vacant. Additional commercial buildings were constructed in the area to the southeast of the Subject Property.	Historical Aerials, Topographic Maps, City Directories

Northern Stormwater Pond Dredge Area

From	To	Past Use and History	Source
1895	1953	The Subject Property was undeveloped and bisected by a stream running east to west through the 1950s. The stream came from an area further south that would be developed as the airport by the 1950s. Adjacent properties to the north, west, and east were vacant and consisted of low lying swamp and forest. A road ran through the area to the southwest of the Subject Property, with multiple residences.	Historical Aerials, Topographic Maps
1957	1981	By the late 1950s the road and residences were removed from the area to the southwest. An air force complex was constructed in the area, with multiple structures used to store munitions. The Subject Property and immediately adjacent properties remained unchanged and vacant.	Historical Aerials, Topographic Maps
1989	Present	By the late 1980s a stormwater pond was constructed in the central portion of the Subject Property. The was constructed in the flow line of the stream, with the inflow coming from the southeast and the pond outlet continuing to the northwest. An access road was constructed along the western side of the Subject Property back towards the airport. The remainder of the Subject Property and adjacent properties remained vacant and wooded.	Historical Aerials, Topographic Maps

5 Subject Property Reconnaissance

SEH personnel, Jack Hagley and Robert Hawkins conducted a site reconnaissance of the Subject Property and surrounding properties on April 20 and 21, 2026. At the time of the site reconnaissance, badged SEH personnel permitted to access the DLH airfield, were unaccompanied. Select photographs of the Subject Property are included in **Appendix H**.

5.1 Methodology and Limiting Conditions

The reconnaissance included a site visit to visually observe the Subject Property.

SEH conducted observations of the Subject Property by walking across the Subject Property. Adjacent property observations were made from public road right-of-ways, other publicly-accessible areas, and Subject Property boundaries.

5.2 Subject Property

SEH made the following general site reconnaissance observations.

5.2.1 Current Uses of the Subject Property

The Taxiway A Reconstruction Area is currently occupied by paved surfaces and maintained green space. This area is used for the movement of aircrafts at the DLH.

Both the Terminal Stormwater Pond Expansion Area and Northern Stormwater Drainage Pond area are occupied by pond structures and are used to drain surface water from the DLH property. The Northern Stormwater Drainage Pond is connected to a drainage ditch channel that drains a majority of the northwestern portion of the DLH property. The Terminal Stormwater Pond Expansion Area drains stormwater from the southeastern portion of the DLH property.

5.2.2 Observable Past Uses of the Subject Property

Indications of past uses of the Subject Property were not observed.

5.2.3 Geologic, Hydrogeologic, Hydrologic, and Topographic Conditions

The topography of the Taxiway A Reconstruction Area gently slopes to the southeast.

The Terminal Stormwater Pond Expansion Area gently slopes to the east. The existing pond is approximately 7 feet deep with a drainage outlet located in the southeastern portion of the pond. Inlet structures and rip-rap were located at the western, northern, and eastern sides of the pond.

The Northern Stormwater Drainage Pond portion of the Subject Property is relatively flat. The existing pond is approximately 9 feet deep with the existing outlet structure located at the western end of the pond. The existing drainage ditch enters on the southeastern portion of the pond.

5.2.4 General Description of Structures

No structures are currently located on the Subject Property.

5.2.5 Roads

No roadways were observed intersecting the Subject Property.

The main DLH east-west runway (Runway 9/27) is located adjacent to the north of the Taxiway A Reconstruction Area.

The Northern Stormwater Drainage Pond portion of the Subject Property is accessed by an unnamed unpaved roadway to the south of the pond.

The Terminal Stormwater Pond Expansion Area is bound by Grinden Drive to the south and Haines Road the east.

5.2.6 Potable Water Supply

Indications of a potable water supply were not observed at the time of the site reconnaissance as no strcutres were located within the Subject Property. Structures located within the DLH property are serviced by the municipal water system.

5.2.7 Sewage Disposal System

Indications of a sewage disposal system were not observed at the time of the site reconnaissance as no strcutres were located within the Subject Property. Structures located within the DLH property are serviced by the municipal sewage system

5.2.8 Subject Property Reconnaissance Observations

During the Subject Property reconnaissance, the following were observed, and if observed, are described in the following sections.

Feature or Condition	Observed
Storage Tanks	No
Strong, Pungent or Noxious Odors	No
Pools of Liquids	No
Drums, Totes, or Other Containers	No
Polychlorinated biphenyl- (PCB-) Containing Items	No
Heating/Cooling Systems	No
Stains or Corrosions on Floors, Walls, or Ceilings apart from Water Staining	No
Drains or Sumps	No
Pits, Ponds or Lagoons	Yes
Stained Soil or Pavement	No
Stressed Vegetation (from something other than insufficient water)	No
Solid Waste	No
Water/Wastewater Discharges	Yes
Wells	Yes
Septic Systems of Cesspools	No
Other	No

5.2.8.1 Pits, Ponds, or Lagoons

A stormwater/surface water drainage pond occupies both the northern and eastern portions of the Subject Property. See **Section 5.2.3** for a description of the existing conditions of the ponds as observed during the site reconnaissance.

5.2.8.2 Water or Wastewater Discharges

The Terminal Stormwater Pond Expansion Area includes a drainage outlet located in the southeastern portion of the pond.

The Northern Stormwater Drainage Pond portion of the Subject Property includes an outlet structure along the western end of the pond.

No water or wastewater discharges were observed within the Taxiway A Reconstruction Area.

5.2.8.3 Wells

An at grade monitoring well was observed along the northern bank of the existing stormwater pond. The MDH unique well identification number was not observed. The location of the well is depicted on **Figure 3** and photograph of the well is included in **Appendix H**.

5.3 Adjoining Properties

5.3.1 Current Uses of Adjoining Properties - Taxiway A Reconstruction Area

The Subject Property is located in a commercial area in Duluth, Minnesota.

Based on information obtained from the site reconnaissance, interviews and historical records, current uses of adjoining properties were identified. Currently, properties surrounding the site include the following:

North	Maintained greenspace, followed by Runway 9/27.
East	Taxiway A and associated maintained greenspace continues east of the Subject Property.
South	Maintained greenspace, followed by the airport perimeter road.
West	Maintained greenspace continues west of the Subject Property.

5.3.2 Observable Past Uses of Adjoining Properties - Taxiway A Reconstruction Area

Past uses of the adjoining properties were not observed.

5.3.3 Current Uses of Adjoining Properties – Terminal Stormwater Pond Expansion Area

The Subject Property is located in a commercial area in Duluth, Minnesota.

Based on information obtained from the site reconnaissance, interviews and historical records, current uses of adjoining properties were identified. Currently, properties surrounding the site include the following:

North	Maintained greenspace, followed by Grinden Drive.
East	Haines Road, followed by vegetated vacant property.
South	Grinden Drive, followed by vegetated vacant property.
West	Surface parking lot for the nearby Duluth International Airport Terminal.

5.3.4 Observable Past Uses of Adjoining Properties - Terminal Stormwater Pond Expansion Area

Past uses of the adjoining properties were not observed.

5.3.5 Current Uses of Adjoining Properties – Northern Stormwater Pond Dredge Area

The Subject Property is located in a commercial area in Duluth, Minnesota.

Based on information obtained from the site reconnaissance, interviews and historical records, current uses of adjoining properties were identified. Currently, properties surrounding the site include the following:

North	Vegetated vacant property.
East	Vegetated vacant property and wetlands.
South	Vegetated vacant property, followed by a controlled air force facility.
West	Vegetated vacant property with the pond outflow stream.

5.3.6 Observable Past Uses of Adjoining Properties - Taxiway A Reconstruction Area

Past uses of the adjoining properties were not observed.

6 Interviews

Interviews were conducted with persons familiar with the Subject Property to obtain information regarding the presence or possible presence of RECs, CRECs or HRECs in connection with the Subject Property.

6.1 Interview with Subject Property Representative

Subject Property Representative	Years Familiar with the Subject Property	Response
Ryan Welch	13	SEH interviewed Mr. Welch on April 8, 2026. Mr. Welch provided information on scope of work for the proposed project, provided contact information for obtaining documentation related to environmental activities completed at the DLH. Information provided is incorporated throughout this report.

6.2 Inquiry with Local Government Officials

Government Official	Response
St. Louis County	On May 8, 2026, SEH requested an interview with various St. Louis County departments including Environmental Services, the Public Works Department and the St. Louis County Public Records. A response was received from Steve Pellinen with Environmental Services and Marie Bourget with Public Records; however, neither response provided information related to the identification of RECs, CRECs, or HRECs in connection with the Subject Property.
City of Duluth	On May 8, 2026, SEH requested an interview with various City of Duluth departments including the Property and Faciliteis Management Department, Fire Department, Police Department, and Engineering Department. A response was received from Melissa Garrick with the City of Duluth Fire Department; however, Melissa was unable to provide information related to the identification of RECs, CRECs, or HRECs in connection with the Subject Property.

6.3 Interview with Others

6.3.1 MPCA

SEH interviewed Mark Elliot, Hydrologist with the MPCA on April 1, 2026. Mark provided documentation related to previous investigative activities completed at the DLH through the Minnesota Air National Guard (ANG) and contact information for the local ANG Environmental Manager.

6.3.2 Minnesota ANG

SEH interviewed Mikah Inkawhich, Environmental Manager with the ANG 148th Fighter Wing on April 14, 2026. Mikah provided interim results for an ongoing PFAS investigation being completed at the DLH through the 148th Fighter Wing and MPCA. Mikah also provided access to an Air Force Administrative Record Viewer in order to obtain and review applicable reporting.

7 Additional Services

Per the agreed upon Scope of Services, non-scope considerations specified in Section 13.1.5 of ASTM Practice E1527-21 were not evaluated.

8 Findings and Opinions

SEH has completed this Phase I ESA, and based on the information presented above, the following findings and opinions are summarized below. Select features are mapped on **Figure 2**.

8.1 General Overview

The Subject Property includes three project areas that are identified as the Taxiway A Reconstruction Area, the Terminal Stormwater Pond Expansion Area, and the Northern Stormwater Pond Dredge Area. These project areas are all separated and are generally located in the western, southeastern, and northern parts of the DLH, respectively.

The Subject Property encompasses portions of St. Louis County PINs 010-2747-00160, 010-2747-00210, 010-2747-00220, 280-0031-00455, 280-0031-00456, 395-0010-00330, 395-0010-00348, 395-0010-00349, 395-0010-00350, and 395-0010-00550.

Taxiway A is the parallel taxiway for the Runway 9/27 serving DLH. The existing Taxiway A is approximately 10,700 feet in length and the reconstruction is proposed to be completed in nine phases. Phase 7 of the Taxiway A Reconstruction project, consists of an approximately 2,400-foot-long portion of the taxiway at its western end.

The Taxiway A Area was undeveloped and occupied by low-lying wetland on historic maps. By the 1930s, the Taxiway A Reconstruction Area was developed as farmland, and by the early 1950s, the eastern portion of the Taxiway A Reconstruction Area was developed as part of the DLH. Additional improvements to the DLH occurred through the 1960s with minimal changes observed through the present day.

The Terminal Stormwater Pond Expansion Area is located southeast of the terminal building serving DLH. The existing pond is located directly east of the southeastern corner of the large surface parking lot south of the terminal building. The Terminal Stormwater Pond Expansion Area is approximately 25,000 square feet in size and will expand the footprint of the existing stormwater pond to the west.

The Terminal Stormwater Pond Expansion Area was undeveloped and occupied by low-lying wetland on historic maps. Although adjacent development of various portions of the DLH occurred as early as the late 1940s, the pond area remained undeveloped through the early 2020s. By the mid-2020s, the existing stormwater pond was constructed.

The Northern Stormwater Pond Dredge Area is located north of the airfield at the end of Warhawk Drive. The existing stormwater pond is located directly north of the end of Warhawk Drive and is accessed by a gravel access road. The Northern Stormwater Pond Dredge will consist of the removal of approximately 1,000 cubic yards of material from the existing pond to restore the storage capacity of the pond. The pond footprint will not be expanded.

The Northern Stormwater Pond Dredge Area was undeveloped and occupied by a drainage ditch since at least the late 1930s, and by the late 1980s, the existing pond was constructed. An air

force complex was constructed approximately 1,000 feet southwest of the pond area in the 1950s.

The Subject Property was identified in numerous regulatory databases related to historic and current uses including Leak sites, spills, RCRA hazardous waste generators, construction stormwater permits, and air emissions permits. Although the database report identified these listings for the Subject Property, a majority were located greater than 1,000 feet from the Subject Property areas with a select few located as close as 500 feet to the Subject Property areas.

Twelve regulated spills associated with the DLH were also identified as either unlocatable or as within the DLH property in the database reports. Although the exact location of these spills are unknown, it is not likely that all of these releases have affected the Subject Property. Given the use of the Taxiway A Reconstruction Area and surrounding area, it is likely that some spills related to fueling activities have occurred on or adjacent to the Taxiway A Reconstruction Area. Therefore, the previous releases with limited location information are considered a **CREC** for the Subject Property.

The remaining facilities included in the database report are unlikely to have current or former releases of hazardous substances or petroleum products with the potential to migrate to the Subject Property based on a variety of factors including, but not limited to: the overall setting in which the Subject Property is located, potential depth to groundwater and assumed groundwater flow direction, existing or past uses of the surrounding properties, the potential migration distance of hazardous substances and/or petroleum products in the area, and distance from the Subject Property.

The DLH includes the base of the Minnesota ANG's 148th FW. The 148th FW facilities are located on leased properties at several locations in the vicinity of the main east-west runway at the DLH and the main base is located on the eastern side of the DLH. The 148th FW base houses aircraft, vehicles, and equipment. Current and past operations at the base have involved the use of products such as fuels, oils, lubricants, paints, paint thinners, solvents, and AFFF. Based on a review of the 2019 and 2025 Five-Year Review Reports, the OUs associated with the 148th FW base are not considered a REC for the Subject Property.

A base-wide PFAS RI is currently on-going at the DLH as the Minnesota ANG is evaluating PFAS impacts through a similar process used under the IRP and consistent with the provisions of CERCLA, as amended. Based on a review of the interim results provided by the Minnesota ANG, several detections of PFOA and PFDA exceeding their respective MPCA ISRVs and/or RSRVs were located either within or adjacent to the Taxiway A Reconstruction Area and Northern Stormwater Pond Dredge Area and are considered a **REC** for the Subject Property.

8.2 Data Gaps and Data Failures

The following data gaps or data failures were identified in completion of the ESA. The significance of the data gaps has been evaluated by the environmental professional as follows:

- MPCA files for SA0020205, SA0020197, and LS0010249 were not available for review by the publication of this report. Based on factors including the proposed scope of work for the project, the potential depth to groundwater and assumed groundwater flow direction, the potential migration distance of hazardous substances and/or petroleum products in the area, and distance from the Subject Property this data gap does not appear to be significant to the Phase I ESA.

- Interviews with all past and current owners of parcels within the Subject Property were not within the scope of this Phase I ESA. The history of the Subject Property and prior assessments provided adequate information to complete the Phase I ESA. This is not a significant data gap.
- Information for the Subject Property was not identified between 1939 and 1948, between 1953 and 1961, between 1961 and 1969, and between 1981 and 1986. However, based on the lack of land use change, these data failures are not considered significant data gap.

9 Conclusions

SEH has performed a Phase I Environmental Site Assessment in general conformance with the scope and limitations of ASTM Practice E1527-21 of the property associated with the Taxiway A Reconstruction – Phase 7 project at the Duluth International Airport in Duluth, St. Louis County, Minnesota, the Subject Property. Any exceptions to, or deletions or deviations from, this practice are described in **Sections 1.4** and **10.0** of this report. This assessment has revealed the following RECs, CRECs or significant data gaps in connection with the Subject Property.

- Detections of PFAS compounds exceeding their respective MPCA ISRVs and/or RSRVs at or adjacent to the Taxiway A Reconstruction Area and Northern Stormwater Pond Dredge Area; **REC**
- Previous spills with limited location information; **CREC**.

10 Deviations

Other than the limitations and exceptions listed in **Section 1.4** and **Section 8.0**, there were no substantial deletions, deviations, or additions from this practice.

11 Limitations and Standard of Care

This ESA was completed in general accordance with ASTM Practice E1527-21, *Standard Practice for Environmental Assessments* and SEH's agreement with Duluth Airport Authority . The findings and conclusions of this report are not scientific certainties, but probabilities based on professional judgment regarding the significance and accuracy of the collected data. When reasonably ascertainable, environmental data was obtained and reviewed. However, the accuracy of the sources and collected data is not the responsibility of SEH.

When a Phase I ESA is completed without subsurface exploration or chemical analyses of the soil and/or groundwater at the site, no statement of scientific certainty can be made regarding the environmental or subsurface conditions resulting from either onsite or offsite pollutant sources. The possibility always exists for contaminants to migrate from one property to another via surface water, groundwater or soil. The ability to accurately assess the environmental risk associated with the transport of pollutants through these media to the site is beyond the scope of this Phase I ESA.

This Phase I ESA report was prepared for the exclusive use of the Duluth Airport Authority. The negotiated scope of work imposed limitations on the collection and interpretation of evidence, consistent with the ASTM Standard, resulting in a commensurate uncertainty as to the conclusions drawn. The degree of uncertainty was deemed acceptable by the Duluth Airport Authority. Any third party interested in using or relying upon this report must first secure written

authorization from the Duluth Airport Authority and SEH, and agree to accept SEH's terms and conditions respecting indemnification and agreed upon limitations of liability.

SEH's services were conducted in a manner consistent with the level of care and skill standard to the industry. The conclusions and recommendations contained in this report were arrived at in accordance with generally accepted professional practice at this time and location. Other than this, no warranty is implied or intended.

13 Signature of Environmental Professional

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental professional as defined in §312.10 of 40 CFR 312 (**Appendix I**).

I have the specific qualification based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in §312.10 of 40 CFR 312.

Keri Aufdencamp
Project Manager

User Provided Documents

PHASE I ENVIRONMENTAL SITE ASSESSMENT
USER QUESTIONNAIRE

Taxiway A Reconstruction Phase 7
SEH No. 186683

The Phase I ESA standard ASTM 1527-21 identified certain User responsibilities. This intent of this User Questionnaire is to assist the user and the environmental professional in gathering information from the User that may be material to identifying recognized environmental conditions. The "All Appropriate Inquiries" Final Rule (40 CFR Part 312) requires that these tasks be performed by or on behalf of a party seeking to qualify for an LLP to CERCLA liability.

Question	Comment
Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25). Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state, or local law? ☐ **Yes** ☒ **No**	
Activity and land use limitations (AULs) that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26). Are you aware of any AULs such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law? ☐ **Yes** ☒ **No**	
Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28). As the user of this ESA do you have any specialized knowledge of experience related to the property or nearby properties? For example, are involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? ☐ **Yes** ☒ **No**	
Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29). Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property? ☐ **Yes** ☐ **No**	Not applicable

Commonly known or reasonably ascertainable information about the property (40CFR 312.30).

Question	Answer
Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? ☒ **Yes** ☐ **No**	Soils testing results have been collected in recent years from the project site.
Do you know of any past uses of the property? ☐ **Yes** ☒ **No**	
Do you know of specific chemicals that were present or once were present at the property? ☒ **Yes** ☐ **No**	PFAS chemicals have been observed at the project site through Duluth Air National Guard Base airfield site investigation
Do you know of any spills or chemical releases that have taken place at the property? ☐ **Yes** ☒ **No**	
Do you know of any environmental cleanups that have taken place at the property? ☐ **Yes** ☒ **No**	

The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

Question	Answer
As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indications that point to the presence or likely presence of contamination at this property? ☒ **Yes** ☐ **No**	PFAS chemicals have been observed at the project site through Duluth Air National Guard Base airfield site investigation

Please answer these additional questions if applicable.

Question	Answer
Reason for the Phase I ESA?	An airfield taxiway pavement reconstruction and stormwater pond dredging project will be performed at this site, including excavation of potentially contaminated soils.
Type of property and type of property transaction?	City of Duluth property on airfield at international airport. Taxiway pavement reconstruction and pond dredging is proposed for this site.
Complete and correct address and/or parcel identification numbers for the property?	Parcel ID Numbers: 010-2747-00210, 010-2747-00220, 395-0010-00330, 395-0010-00348, 395-0010-00349, 395-0010-00350, 280-0031-00455, 280-0031-00456
Identify all parties, or “users,” who will rely on the Phase I ESA Report?	Duluth Airport Authority
Name and contact information for the site contact to coordinate the site reconnaissance?	Ryan Welch, Director of Operations Duluth Airport Authority 218-625-7767 rwelch@duluthairport.com
Name and contact information for the current owner/occupant/manager of the property?	Ryan Welch, Director of Operations Duluth Airport Authority 218-625-7767 rwelch@duluthairport.com
Name and contact information for past owners/occupants/managers of the property?	Duluth Airport Authority

Please also provide any existing documentation that would assist in identifying environmental conditions and historical use of the property (ex. title records, previous environmental assessments or investigations).

Do you have any of the following documents relevant to the Phase I ESA?	
■ **Yes** ☐ **No**	Environmental site assessment reports
☐ **Yes** ■ **No**	Environmental compliance audit reports
■ **Yes** ☐ **No**	Environmental permits (for example, solid waste disposal permits, hazardous waste disposal permits, wastewater permits, NPDES permits, underground injection permits)
☐ **Yes** ■ **No**	Registrations for underground and above-ground storage tanks
☐ **Yes** ■ **No**	Registrations for underground injection systems
☐ **Yes** ■ **No**	Material safety data sheets
☐ **Yes** ■ **No**	Community right-to-know plan
■ **Yes** ☐ **No**	Safety plans; preparedness and prevention plans; spill prevention, countermeasure, and control plans; facility response plans, etc.
■ **Yes** ☐ **No**	Reports regarding hydrogeologic conditions on the property or surrounding area,
☐ **Yes** ■ **No**	Notices or other correspondence from any government agency relating to past or current violations of environmental laws with respect to the property or relating to environmental liens encumbering the property
☐ **Yes** ■ **No**	Hazardous waste generator notices or reports
■ **Yes** ☐ **No**	Geotechnical studies
☐ **Yes** ■ **No**	Risk assessments
☐ **Yes** ■ **No**	Recorded AULs

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Property History:

The former Duluth Air Force Base was established in the early 1950's during the Korean War era. The site closed in 1982. Some of the major functions of the base included the operation and maintenance of Bomarc anti-aircraft missiles, Goose Decoy missiles, fighter aircraft, interceptors, and SAFE radar/communications. The base served to support the Duluth Missile Site near the French River, Minnesota, and the Finland Air Force Radar Station in Finland, Minnesota. The property was conveyed to the City, the Airport Authority, and to the National Guard. It is being used as an airport, for commercial and industrial purposes, and for National Guard training. Tanks, petroleum and building demolition are the subjects of the FUDS Program involvement.

Feature Description:

The former Duluth Air Force Base was established in the early 1950's during the Korean War era. The site closed in 1982. Some of the major functions of the base included the operation and maintenance of Bomarc anti-aircraft missiles, Goose Decoy missiles, fighter aircraft, interceptors, and SAFE radar/communications. The base served to support the Duluth Missile Site near the French River, Minnesota, and the Finland Air Force Radar Station in Finland, Minnesota. The property was conveyed to the City, the Airport Authority, and to the National Guard. It is being used as an airport, for commercial and industrial purposes, and for National Guard training. Tanks, petroleum and building demolition are the subjects of the FUDS Program involvement.

Comments: **No File**\n\nSpill occurred during an internal transfer of fuel from one wing to the other in a Northwest DC-9. Duluth Air National Guard responded and contained with pads. Clean-up is almost complete, Air National Guard has 3 - 55 gallon drums of clean-up material. Caller stated that in the past the Air National Guard has handled disposal, caller will be checking with them shortly if that will be the case again. SUPPLEMENTAL Report indicated that airport will handle disposal.

Hazardous Waste Handler Details

Seq No:	1
Receive Date:	19940506
Handler Name:	CIRRUS DESIGN CORP

Fed Waste Generator: 1
Generator Code Description: Large Quantity Generator
Tsd Activity: N
Source Type: Notification

Waste Code Details

Waste Code: D001
Waste Code Desc: IGNITABLE WASTE

Waste Code: D002
Waste Code Desc: CORROSIVE WASTE

Waste Code: D009
Waste Code Desc: MERCURY

Waste Code: F001
Waste Code Desc: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Code Desc: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Code Desc: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Description of Events: PRODUCT IS BOTTOM LOADED AND DRIVER WAS UNAWARE THAT THE EXTERNAL VALVE WAS NOT SEATED PROPERLY UNTIL THE UNLOADING LINE CAP WAS REMOVED AT THE TIME O F DELIVERY. WET LINE LEAKED OUT, APPROX 25 GALLONS, UNLOADING HOSE WAS HOOK ED UP AND THEN PROCEEDED TO COMPLETE UNLOADING. AIRBASE PERSONNEL ASSISTED DRIVER IN CLEAN-UP WITH ABSORBENT MATERIAL. THE SPILL WAS CONTAINED ON A CO NCRETE SLAB UNTIL CLEANUP WAS COMPLETED. TEMPERATURE AT THE TIME OF THIS SH IPMENT WAS APPROX. -20 DEGREES F. MOISTURE GOT INTO VALVE THROUGH CONDENSA TION AND FROZE NOT PERMITTING A TIGHT SEAT ON PREVIOUS LOAD TRANSPORTED.

Recommend Actions Taken:

Site: ***WASH PLANT***
From the intersection of Hwy 53 and Hwy 194 travel west from Hermantown about 4 miles, pit on left side Hermantown MN

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

National Priority List: NPL

The U.S. Environmental Protection Agency (EPA)'s National Priorities List (NPL) includes the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program, based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. This data includes NPL sites represented as polygons, where available, that can be sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS), and is limited to those sites where the NPL Status reflects the site is 'Currently on the Final NPL (F)' and/or the 'Site is Part of NPL Site (A)'. These site boundaries represent the footprint of a whole site, the sum of all the Operable Units (OUs) and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. As site investigation and remediation progress, OUs may be added, modified or refined. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Jan 18, 2026

National Priority List - Proposed: PROPOSED NPL

Sites proposed by the U.S. Environmental Protection Agency (EPA), the state agency, or concerned citizens for addition to the National Priorities List (NPL) due to contamination by hazardous waste and identified by the EPA as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites represented as polygons, where available, can be sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS). These site boundaries represent the footprint of a whole site, the sum of all the Operable Units (OUs) and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Jan 18, 2026

Deleted NPL: DELETED NPL

Sites deleted from the U.S. Environmental Protection Agency (EPA)'s National Priorities List (NPL). The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites represented as polygons, where available, can be sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS). These site boundaries represent the footprint of a whole site, the sum of all the Operable Units (OUs) and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Jan 18, 2026

SEMS List 8R Active Site Inventory: SEMS

The U.S. Environmental Protection Agency's (EPA) Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. This data includes SEMS sites from the List 8R Active file as well as applicable sites from the EPA's Facility Registry Service map tool. This data may also include applicable sites represented as polygons sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS), and is limited to those sites where the NPL Status reflects the site is 'Not on the NPL (N)' , 'Removed from Proposed (R)', and/or 'Pre-Proposal Site (S)'. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Dec 26, 2025

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

SEMS List 8R Archive Sites: SEMS ARCHIVE

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. This data includes sites from the List 8R Archived site file. This data may also include applicable sites represented as polygons sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS), and is limited to those sites where the NPL Status reflects the site is 'Not on the NPL (N)' , 'Removed from Proposed (R)', and/or 'Pre-Proposal Site (S)'. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Dec 26, 2025

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA). This database was provided by the United States Environmental Protection Agency (EPA). Refer to SEMS LIEN as the current data source for Superfund Liens.

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action: RCRA CORRACTS

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Nov 30, 2025

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites that have indicated engagement in the treatment, storage, or disposal of hazardous waste which requires a RCRA hazardous waste permit.

Government Publication Date: Nov 30, 2025

RCRA Generator List: RCRA LQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste. This list also includes RCRAInfo sites that have notified as LQGs that do not have a registered Site Manager or Certifier in RCRAInfo.

Government Publication Date: Nov 30, 2025

RCRA Small Quantity Generators List: RCRA SQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month. This list also includes RCRAInfo sites that have notified as SQGs that do not have a registered Site Manager or Certifier in RCRAInfo.

Government Publication Date: Nov 30, 2025

RCRA Very Small Quantity Generators List: RCRA VSQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Nov 30, 2025

RCRA Non-Generators: RCRA NON GEN

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Nov 30, 2025

RCRA Sites with Controls: RCRA CONTROLS

List of Resource Conservation and Recovery Act (RCRA) facilities with institutional controls in place. RCRA gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

Government Publication Date: Nov 30, 2025

Federal Engineering Controls-ECs: FED ENG

List of Engineering controls (ECs) made available by the United States Environmental Protection Agency (EPA). ECs encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. The EC listing includes remedy component data from Superfund decision documents for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Jan 30, 2026

Federal Institutional Controls- ICs: FED INST

List of Institutional controls (ICs) made available by the United States Environmental Protection Agency (EPA). ICs are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site. The IC listing includes remedy component data from Superfund decision documents for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Jan 30, 2026

Land Use Controls Information System: LUCIS

The Land Use Controls Information System (LUCIS) database is sourced from the U.S. Department of the Navy (DON). This data contains information for former Base Realignment and Closure (BRAC) properties across the United States. DON's BRAC office was tasked with tracking certain base closures while requiring the prevention of risks to human health and the environment of those properties with LUCs in place. Regarding currently available LUC Sites data, the sites listing is limited to centroid point locations for the overall installation property boundaries. Formerly obtained LUC Sites data may reflect site details that applied previously for a BRAC property.

Government Publication Date: Jun 13, 2024

Institutional Control Boundaries at NPL sites: NPL IC

These boundaries of Institutional Control areas at sites on the U.S. Environmental Protection Agency's (EPA) National Priorities List (NPL), or as Proposed or Deleted, are sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS). The EPA's NPL includes the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. Institutional controls are non-engineered instruments such as administrative and legal controls that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes.

Government Publication Date: Jan 18, 2026

Emergency Response Notification System: ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

Government Publication Date: Feb 8, 2026

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This data is provided by the United States Environmental Protection Agency (EPA) and includes Brownfield sites from the Cleanups in My Community (CIMC) web application.

Government Publication Date: Sep 8, 2025

FEMA Underground Storage Tank Listing: FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Facility Response Plan: FRP

This listing contains facilities that have submitted Facility Response Plans (FRPs) to the U.S. Environmental Protection Agency (EPA). Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit FRPs. Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments. The list includes FRP facilities sourced from the EPA FOIA office and from previously available Homeland Infrastructure Foundation-Level Data (HIFLD) file/s. Disclaimer: Per the EPA FOIA Office, the verification process for current requested FRP data is undergoing review and revision, and any similar reporting will be made public in Fiscal Year 2026. For this reason, the latest available FOIA file may be incomplete.

Government Publication Date: Jun 1, 2025

Delisted Facility Response Plans: DELISTED FRP

Facilities that once appeared in - and have since been removed from - the list of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Jun 1, 2025

Historical Gas Stations: HIST GAS STATIONS

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

Government Publication Date: Jul 1, 1930

Petroleum Refineries: REFN

This list of petroleum refineries is sourced from the U.S. Energy Information Administration (EIA), Refinery Capacity Report. The listing includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year. The geographic area the report covers is the 50 States, the District of Columbia, Puerto Rico, the U.S. Virgin Islands, Guam, and other U.S. possessions. Per the EIA, the facility location data represents the approximate location based on research of publicly available information from sources such as Federal agencies, company websites, and satellite images on public websites.

Government Publication Date: Oct 31, 2024

Petroleum Product and Crude Oil Rail Terminals: BULK TERMINAL

A list of petroleum product and crude oil rail terminals from the U.S. Energy Information Administration (EIA), as well as petroleum terminals sourced from Oak Ridge National Laboratory hosted by the Homeland Infrastructure Foundation-Level Database. Data includes operable bulk petroleum product terminals with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil with activity between 2017 and 2018. EIA petroleum product terminal data comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings.

Government Publication Date: Jun 5, 2025

LIEN on Property: SEMS LIEN

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) provides Lien details on applicable properties, such as the Superfund lien on property activity, the lien property information, and the parties associated with the lien.

Government Publication Date: Dec 26, 2025

Superfund Decision Documents: SUPERFUND ROD

This database contains a list of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include completed Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD) for active and archived sites stored in the Superfund Enterprise Management System (SEMS), along with other associated memos and files. This information is maintained and made available by the U.S. Environmental Protection Agency.

Government Publication Date: Jan 30, 2026

State

Minnesota Permanent List of Priorities: PLP

The state Superfund sites in Minnesota are listed on the Minnesota Permanent List of Priorities (PLP). The hazardous waste sites on the PLP are in various stages of remediation. At these sites investigation and cleanup are needed, cleanup is underway, or cleanup has been completed and long-term monitoring or maintenance continues. This data is made available by the Minnesota Pollution Control Agency (MPCA). This database serves a purpose similar to that of the federal NPL, functioning as a state-level counterpart for prioritizing cleanup efforts at hazardous substance release sites.

Government Publication Date: Feb 26, 2026

Delisted Permanent List of Priorities (PLP): DEL PLP

This list contains sites that were previously included - and have since been removed from - the Permanent List of Priorities (PLP) maintained by Minnesota's Pollution Control Agency (MPCA) but have now been delisted.

Government Publication Date: Feb 26, 2026

Minnesota Site Remediation Section Database: SHWS

The Site Remediation Section identifies, investigates, and determines appropriate cleanup plans for abandoned or uncontrolled hazardous waste sites where a release or potential release of a hazardous substance poses a risk to human health or the environment. This data is made available by the Minnesota Pollution Control Agency (MPCA)'s Site Remediation Section. This database serves a purpose similar to that of the federal Superfund Enterprise Management System (SEMS), functioning as a state-level counterpart for tracking potential hazardous substance release sites.

Government Publication Date: Feb 26, 2026

MPCA Site Assessment and Emergency Response Sites: SITE ASSESSMENT

List of active and closed sites that are currently under site assessment by Minnesota Pollution Control Agency (MPCA) and are a part of MPCA Remediation Sites list, and Emergency Management Sites where a chemical spill or some other environmental incident occurred that required immediate action to protect human health and the environment (includes only Emergency Management Sites that require significant staff involvement).

Government Publication Date: Feb 26, 2026

Permitted Solid Waste Facilities: SWF/LF

A list of permitted solid waste and landfill facilities made available by the Minnesota Pollution Control Agency (MPCA).

Government Publication Date: Mar 3, 2026

Closed Landfills Priority List: LCP

The Minnesota Legislature enacted the Landfill Cleanup Act (LCA) in 1994 to ensure the proper closure and post-closure care at up to 112 closed, permitted municipal sanitary landfills located throughout the state. Based on this legislation, the Minnesota Pollution Control Agency (MPCA) created the Closed Landfill Program (CLP) to administer the LCA mandates. This data made available by The Minnesota Pollution Control Agency (MPCA).

Government Publication Date: Jan 16, 2025

Unpermitted Dump Sites: UNPERMITTED LF

The Minnesota Pollution Control Agency (MPCA) defines "dumps" as those landfills that never held a valid permit from the MPCA. Generally, dumps existed prior to the permitting program established with the creation of the MPCA in 1967. This database is made available by MPCA.

Government Publication Date: Feb 26, 2026

Recycling Markets Directory: RECYCLING

The Recycling Markets Directory is provided by the Minnesota Pollution Control Agency (MPCA). The markets in this database accept large (commercial) quantities of materials.

Government Publication Date: Mar 4, 2026

Historical Leaking Underground Storage Tanks: HIST LUST

A list of leaking underground storage tanks (LUSTs) in the tanks database maintained by the Minnesota Pollution Control Agency (MPCA) up until Nov 01, 2016.

Government Publication Date: Nov 1, 2016

Deleted Leaking Underground Storage Tanks: DEL LUST

A list of leaking underground storage tanks that are often deleted for various reasons. Deletion occurs primarily due to a duplication, or that the source was determined to not be from a tank. This list was provided by Minnesota Pollution Control Agency.

Government Publication Date: Jan 5, 2016

Historical Leaking Aboveground Storage Tanks: HIST LAST

A list of leaking aboveground storage tanks (LASTs) in the tanks database maintained by the Minnesota Pollution Control Agency (MPCA) up until Nov 01, 2016.

Government Publication Date: Nov 1, 2016

Historical Leak Sites: HIST LEAKSITES

A list of leak sites that were neither determined as aboveground nor underground in the tanks database maintained by the Minnesota Pollution Control Agency (MPCA) up until Nov 01, 2016.

Government Publication Date: Nov 1, 2016

MPCA Remediation Leak Sites: LST REM SITE

This is list of leak sites in which the Minnesota Pollution Control Agency (MPCA) is involved in remediation activities. The MPCA publishes this listing.

Government Publication Date: Feb 26, 2026

MPCA Tank Incidents: LST INCIDENT

A list of leaking and registered tank sites in Minnesota that includes locations, details of tank installation and construction, and installed safety measures. This list is provided by Minnesota Pollution Control Agency (MPCA).

Government Publication Date: Feb 23, 2026

Delisted Leaking Storage Tanks: DELISTED LST

This database contains a list of closed leaking storage tank sites that were removed from the Minnesota Pollution Control Agency (MPCA).

Government Publication Date: Feb 26, 2026

Underground Storage Tanks: UST

In Minnesota, there are about 18,000 regulated underground storage tanks (USTs) currently in use. The Underground Storage Tank Program in the Minnesota Pollution Control Agency (MPCA) was created to help prevent contamination caused by leaking tanks. This is a list that contains all regulated USTs. Some types of USTs are exempt from state regulations, such as: tanks with capacity of 110 gallons or less; farm and residential tanks with a 1,100-gallon capacity or less, storing motor fuel for non-commercial purposes, or heating oil for on-site consumption; tanks that contain a minimum concentration of regulated substances; flow-through process tanks; oil-water separators. This data is made available by MPCA.

Government Publication Date: Feb 25, 2026

Minnesota Above Ground Storage Tanks: AST

There are more than 20,000 regulated above-ground storage tanks (ASTs) currently in use across Minnesota. Most tanks located above ground containing liquid substances (i.e., not gaseous or solid at ambient temperature and pressure) are subject to the Minnesota Pollution Control Agency's (MPCA) rules for design and operation of ASTs. This list contains ASTs regulated by MPCA. Some types of ASTs are exempt from the regulations, such as but not limited to the following: ASTs with a capacity of 500 gallons or less; Farm ASTs; Residential ASTs storing 1,100 gallons or less of motor fuel used for noncommercial purposes; ASTs containing hazardous wastes subject to a treatment or storage permit or containing agricultural chemicals regulated under MN Statutes 18B, 18C, 18D; Stormwater collection systems and septic systems. This data is made available by the MPCA.

Government Publication Date: Feb 23, 2026

Tank Sites: HIST TANK

A list of tank sites not included in AST or UST, this list maintained by the Minnesota Pollution Control Agency (MPCA) up until Dec 30, 2016.

Government Publication Date: Dec 30, 2016

Delisted Storage Tanks: DELISTED TANK

This database contains a list of storage tank sites that were removed from the Minnesota Pollution Control Agency (MPCA).

Government Publication Date: Feb 26, 2026

Sites with Institutional Control Events: INST

A list made available by the Minnesota Pollution Control Agency (MPCA) consisting of remediation sites that have various institutional controls in place.

Government Publication Date: Feb 27, 2026

Agricultural Contingency Sites Boundaries: AG CONTINGENCY

The Minnesota Department of Agriculture (MDA) Incident Response Unit (IRU) is the state lead agency for the investigation and remediation of incidents involving agricultural chemicals (pesticides and fertilizer). This MDA IRU database includes sites with a soil or ground water contingency, deed restriction, local ordinance, restrictive covenant or deed affidavit in place. The accuracy of the boundaries of these sites can be variable - in most cases, the site boundaries should be considered as only representing the vicinity of the soil or ground water contingency area or plume.

Government Publication Date: Nov 27, 2025

Petroleum Brownfields Program Sites: BROWNFIELDS

The Minnesota Pollution Control Agency (MPCA)'s Petroleum Brownfields Program handles petroleum contamination under the Petroleum Tank Release Cleanup Act (Minnesota Statutes § 115C). This data is made available by MPCA.

Government Publication Date: Feb 26, 2026

Voluntary Investigation and Cleanup Program List: VIC

The Minnesota Pollution Control Agency's (MPCA) Brownfield Program consists of an integrated program called the Voluntary Investigation and Cleanup (VIC) Program. This program handles hazardous substance contamination under Minnesota's Environmental Response and Liability Act (Minnesota Statutes § 115B). This database is made available by MPCA.

Government Publication Date: Feb 26, 2026

Potential Voluntary Investigation and Cleanup Program Sites: POTENTIAL VIC

This listing of Potential Voluntary Investigation and Cleanup Program sites is provided by the Minnesota Pollution Control Agency (MPCA). These potential sites have not yet entered into the VIC Program until an application has been received at the MPCA.

Government Publication Date: Apr 22, 2016

MPCA Agency Interests: MPCA AI

Facility, site and project locations from the Minnesota Pollution Control Agency's enterprise database, representing locations associated with waste water, storm water, hazardous waste, feedlot, solid waste, tanks, remediation, and other agency programs. Includes records from "What's In My Neighborhood Sites".

Government Publication Date: Jan 27, 2026

Tribal

Leaking Underground Storage Tanks on Tribal/Indian Lands: INDIAN LUST

This list of leaking underground storage tanks (LUSTs) on Tribal/Indian Lands in Region 5, which includes Minnesota, is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Nov 21, 2025

Underground Storage Tanks on Tribal/Indian Lands: INDIAN UST

This list of underground storage tanks (USTs) on Tribal/Indian Lands in Region 5, which includes Minnesota, is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Nov 21, 2025

Delisted Tribal Leaking Storage Tanks: DELISTED INDIAN LST

Leaking Underground Storage Tank (LUST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian LUST lists made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Nov 21, 2025

Delisted Tribal Underground Storage Tanks: DELISTED INDIAN UST

Underground Storage Tank (UST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian UST lists made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Nov 21, 2025

County

No County standard environmental record sources available for this State.

Additional Environmental Record Sources

Federal

PFAS Greenhouse Gas Emissions Data: PFAS GHG

The U.S. Environmental Protection Agency's (EPA) Greenhouse Gas Reporting Program (GHGRP) collects Greenhouse Gas (GHG) data from large emitting facilities (25,000 metric tons of carbon dioxide equivalent (CO2e) per year), and suppliers of fossil fuels and industrial gases that results in GHG emissions when used. This dataset is sourced from the EPA's PFAS Analytic Tools, and it includes GHG emissions data for facilities that emit or have emitted since 2010 chemicals identified as PFAS based on EPA's CompTox Chemicals Dashboard lists of PFAS with defined and undefined structures. PFAS emissions data has been identified for facilities engaged in the following industrial processes: Aluminum Production (GHGRP Subpart F), HCFC-22 Production and HFC-23 Destruction (Subpart O), Electronics Manufacturing (Subpart I), Fluorinated Gas Production (Subpart L), Magnesium Production (Subpart T), Electrical Transmission and Distribution Equipment Use (Subpart DD), and Manufacture of Electric Transmission and Distribution Equipment (Subpart SS). Over time, other industrial processes with required GHGRP reporting may include PFAS emissions data and the list of reportable gases may change over time. Note that some regulatory programs have specified chemical structure requirements that define PFAS differently than the lists in EPA's CompTox Chemicals Dashboard.

Government Publication Date: Mar 2, 2026

On-Scene Coordinator Response Sites: OSC RESPONSE

This list of On-Scene Coordinator (OSC) Response Sites is provided by the U.S. Environmental Protection Agency (EPA). OSCs are the federal officials responsible for monitoring or directing responses to all oil spills and hazardous substance releases reported to the federal government. OSCs coordinate all federal efforts with, and provide support and information to local, state, and regional response communities. An OSC is an agent of either EPA or the U.S. Coast Guard (USCG), depending on where the incident occurs. EPA's OSCs have primary responsibility for spills and releases to inland areas and waters. USCG OSCs have responsibility for coastal waters and the Great Lakes. In general, an OSC has the following key responsibilities during and after a response: Assessment, Monitoring, Response Assistance, and Evaluation.

Government Publication Date: Oct 8, 2025

Facility Registry Service/Facility Index: FINDS/FRS

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the U.S. Environmental Protection Agency (EPA).

Government Publication Date: Jan 1, 2026

Toxics Release Inventory (TRI) Program: TRIS

The U.S. Environmental Protection Agency's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of toxic chemicals from U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. There are currently 770 individually listed chemicals and 33 chemical categories covered by the TRI Program. Facilities that manufacture, process or otherwise use these chemicals in amounts above established levels must submit annual reporting forms for each chemical. Note that the TRI chemical list does not include all toxic chemicals used in the U.S. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment. This database includes TRI Reporting Data for calendar years 1987 through 2021 and Preliminary Data for 2022.

Government Publication Date: Sep 20, 2023

PFOA/PFOS Contaminated Sites: PFAS NPL

This list of Superfund Sites with Per- and Polyfluoroalkyl Substances (PFAS) detections is made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data, previously the list was obtained by EPA FOIA requests. EPA's Office of Land and Emergency Management and EPA Regional Offices maintain what is known about site investigations, contamination, and remedial actions under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) where PFAS is present in the environment. Limitations: Detections of PFAS at National Priorities List (NPL) sites do not mean that people are at risk from PFAS, are exposed to PFAS, or that the site is the source of the PFAS. The information in the Superfund NPL and Superfund Alternative Agreement (SAA) PFAS detection site list is years old and may not be accurate today. Site information such as site name, site ID, and location has been confirmed for accuracy; however, PFAS-related information such as media sampled, drinking water being above the health advisory, or mitigation efforts has not been verified. For Federal Facilities data, the other Federal agencies (OFA) are the lead agency for their data and provided them to EPA.

Government Publication Date: Dec 29, 2025

Federal Agency Locations with Known or Suspected PFAS Detections: PFAS FED SITES

This list of federal agency locations with known or suspected detections of Per- and Polyfluoroalkyl Substances (PFAS) is made available by the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools data. The EPA outlines that these data are gathered from several federal entities, such as the federal Superfund program, Department of Defense (DOD), National Aeronautics and Space Administration (NASA), Department of Transportation (DOT), and Department of Energy (DOE). The dates this data was extracted for the PFAS Analytic Tools range from 2022 to 2025 per agency entity dataset. Sites on this list do not necessarily reflect the source/s of PFAS contamination and detections do not indicate level of risk or human exposure at the site. Agricultural notifications in this data are limited to DOD sites only. At this time, the EPA is aware that this list is not comprehensive of all Federal agencies.

Government Publication Date: May 30, 2025

SSEHRI PFAS Contamination Sites: PFAS SSEHRI

This PFAS Contamination Site Tracker database is compiled by the PFAS Project Lab, part of the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents. Locations for the Known PFAS Contamination Sites are sourced from the PFAS Sites and Community Resources Map by the PFAS-REACH team, credited to PFAS Project Lab, Silent Spring Institute, and PFAS Exchange. Disclaimer: The source conveys the data undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Access the following source link for the most current information: https://pfasproject.com/pfas-sites-and-community-resources/

Government Publication Date: Aug 1, 2025

National Response Center PFAS Spills: PFAS ERNS

This Per- and Poly-Fluoroalkyl Substances (PFAS) Spills dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The National Response Center (NRC), operated by the U.S. Coast Guard, is the designated federal point of contact for reporting all oil, chemical, and other discharges into the environment, for the United States and its territories. This dataset contains NRC spill information from 1990 to the present that is restricted to records associated with PFAS and PFAS-containing materials. Incidents are filtered to include only records with a "Material Involved" or "Incident Description" related to Aqueous Film Forming Foam (AFFF). The keywords used to filter the data included "AFFF," "Fire Fighting Foam," "Aqueous Film Forming Foam," "Fire Suppressant Foam, "PFAS," "PERFL," "PFOA," "PFOS," and "Genx." Limitations: The data from the NRC website contains initial incident data that has not been validated or investigated by a federal/state response agency. Keyword searches may misidentify some incident reports that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS spills/release incidents.

Government Publication Date: Feb 16, 2026

PFAS NPDES Discharge Monitoring: PFAS NPDES

This list of National Pollutant Discharge Elimination System (NPDES) permitted facilities with required monitoring for Per- and Polyfluoroalkyl (PFAS) Substances is made available via the U.S. Environmental Protection Agency (EPA)'s PFAS Analytic Tools. Any point-source wastewater discharger to waters of the United States must have a NPDES permit, which defines a set of parameters for pollutants and monitoring to ensure that the discharge does not degrade water quality or impair human health. This list includes NPDES permitted facilities associated with permits that monitor for Per- and Polyfluoroalkyl Substances (PFAS), limited to the years 2007 - present. EPA further advises the following regarding these data: currently, fewer than half of states have required PFAS monitoring for at least one of their permittees, and fewer states have established PFAS effluent limits for permittees. For states that may have required monitoring, some reporting and data transfer issues may exist on a state-by-state basis.

Government Publication Date: Dec 16, 2024

Perfluorinated Alkyl Substances (PFAS) from Toxic Release Inventory: PFAS TRI

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a per- or polyfluoroalkyl (PFAS) substance included in the U.S. Environmental Protection Agency's (EPA) consolidated PFAS Master List of PFAS Substances. Encompasses Toxics Release Inventory records included in the EPA PFAS Analytic Tools. The EPA's TRI database currently tracks information on disposal or releases of 770 individually listed toxic chemicals and 33 chemical categories from thousands of U.S. facilities and details about how facilities manage those chemicals through recycling, energy recovery, and treatment. This listing includes TRI Reporting Data for calendar years 1987 through 2021 and Preliminary Data for 2022.

Government Publication Date: Sep 20, 2023

PFAS Water Quality Portal Sampling Data: PFAS WATER

This Per- and Poly-Fluoroalkyl Substances (PFAS) Environmental Media Sampling Data is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The Water Quality Portal (WQP), as a cooperative service sponsored by the United States Geological Survey, the EPA, and the National Water Quality Monitoring Council, is part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations, and individuals submit project details and sampling results to this public repository. Limitations: EPA did not carry out the sampling or testing of a majority of the data in the WQP PFAS dataset. EPA can only speak to the accuracy and completeness of the data from projects like the National Aquatic Resource Surveys for which EPA is the data owner/organization. Data may exist within the file on Quality Assurance Project Plans (QAPPs) and the approving agency of the QAPP, if a QAPP is entered.

Government Publication Date: Feb 2, 2026

PFAS TSCA Manufacture and Import Facilities: PFAS TSCA

The U.S. Environmental Protection Agency (EPA) issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. This list is specific only to TSCA Manufacture and Import Facilities with reported per- and poly-fluoroalkyl (PFAS) substances. Data file is sourced from EPA's PFAS Analytic Tools TSCA dataset which includes CDR/Inventory Update Reporting data from 1998 up to 2020. Disclaimer: This data file includes production and importation data for chemicals identified in EPA's CompTox Chemicals Dashboard list of PFAS without explicit structures and list of PFAS structures in DSSTox. Note that some regulations have specific chemical structure requirements that define PFAS differently than the lists in EPA's CompTox Chemicals Dashboard. Reporting information on manufactured or imported chemical substance amounts should not be compared between facilities, as some companies claim Chemical Data Reporting Rule data fields for PFAS information as Confidential Business Information.

Government Publication Date: Jan 5, 2023

PFAS Waste Transfers from RCRA e-Manifest: PFAS E-MANIFEST

This Per- and Poly-Fluoroalkyl Substances (PFAS) Waste Transfers dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. Every shipment of hazardous waste in the U.S. must be accompanied by a shipment manifest, which is a critical component of the cradle-to-grave tracking of wastes mandated by the Resource Conservation and Recovery Act (RCRA). According to the EPA, currently no Federal Waste Code exists for any PFAS compounds. To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: • PFAS • PFOA • PFOS • PERFL • AFFF • GENX • GEN-X (plus the Vermont state-specific waste codes). Limitations: Amount or concentration of PFAS being transferred cannot be determined from the manifest information. Keyword searches may misidentify some manifest records that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS waste transfers.

Government Publication Date: Feb 14, 2026

PFAS Industry Sectors: PFAS IND

This Per- and Poly-Fluoroalkyl Substances (PFAS) Industry Sectors dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The dataset was developed from various sources that show which industries may be handling PFAS including: EPA's Enforcement and Compliance History Online (ECHO) records restricted to potential PFAS-handling industry sectors, based on the North American Industry Classification System (NAICS) Codes and Standard Industrial Classification (SIC) Codes associated federal regulatory programs (e.g., Clean Water Act, Clean Air Act, and Resource Conservation and Recovery Act) at the facility level; ECHO records for Fire Training Sites identified where fire-fighting foam may have been used in training exercises; and 14 CFR Part 139 Airports compiled from historic and current records from the FAA Airport Data and Information Portal. Since July 2006, all certificated Part 139 Airports are required to have fire-fighting foam onsite that meet certain military specifications, which to date have been fluorinated (Aqueous Film Forming Foam). Limitations: Inclusion in this dataset does not indicate that PFAS are being manufactured, processed, used, or released by the facility. Listed facilities potentially handle PFAS based on their industrial profile but are unconfirmed by the EPA. Keyword searches in ECHO for Fire Training sites may misidentify some facilities and should not be considered to be an exhaustive list of fire training facilities in the U.S.

Government Publication Date: Feb 16, 2026

Hazardous Materials Information Reporting System: HMIRS

The Hazardous Materials Incident Reporting System (HMIRS) database contains unintentional hazardous materials release information reported to the U.S. Department of Transportation, Pipeline and Hazardous Materials Safety Administration.

Government Publication Date: Jan 29, 2026

National Clandestine Drug Labs: NCDL

The U.S. Department of Justice ("the Department"), Drug Enforcement Administration (DEA), provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Nov 30, 2023

Toxic Substances Control Act: TSCA

The U.S. Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule. The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI). EPA CDR collections occur approximately every four years and reporting requirements change per collection.

Government Publication Date: May 12, 2022

Hist TSCA: HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.
Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing: FTTS ADMIN
An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.
Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing: FTTS INSP
An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.
Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List: PRP
Early in the site cleanup process, the U.S. Environmental Protection Agency (EPA) conducts a search to find the Potentially Responsible Parties (PRPs). The EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site. This listing contains PRPs, Noticed Parties, at sites in the EPA's Superfund Enterprise Management System (SEMS).
Government Publication Date: Dec 26, 2025

State Coalition for Remediation of Drycleaners Listing: SCRD DRYCLEANER
The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin. Since 2017, the SCRD no longer maintains this data, refer to applicable state source data where available.
Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS): ICIS
The Integrated Compliance Information System (ICIS) database contains integrated enforcement and compliance information across most of U.S. Environmental Protection Agency's (EPA) programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained by the EPA Headquarters and at the Regional offices. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
Government Publication Date: Oct 18, 2025

Drycleaner Facilities: FED DRYCLEANERS
A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) data as made available by the U.S. Environmental Protection Agency (EPA), sourced from the ECHO Exporter file. This EPA source file tracks facilities that possess NAICS and SIC codes that classify businesses as drycleaner establishments.
Government Publication Date: Jan 24, 2026

Delisted Drycleaner Facilities: DELISTED FED DRY
List of sites which once appeared on - and have since been removed from - the list of drycleaner facilities included in Enforcement and Compliance History Online (ECHO) data as made available by the U.S. Environmental Protection Agency (EPA), sourced from the ECHO Exporter file. This EPA source file tracks facilities that possess NAICS and SIC codes that classify businesses as drycleaner establishments.
Government Publication Date: Jan 24, 2026

Formerly Used Defense Sites: FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DOD) is responsible for an environmental restoration. The FUDS Annual Report to Congress (ARC) is published by the U.S. Army Corps of Engineers (USACE). This data is compiled from the USACE's Geospatial FUDS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) FUDS dataset which applies to the Fiscal Year 2021 FUDS Inventory.
Government Publication Date: May 15, 2023

FUDS Munitions Response Sites: FUDS MRS

Boundaries of Munitions Response Sites (MRS), published with the Formerly Used Defense Sites (FUDS) Annual Report to Congress (ARC) by the U.S. Army Corps of Engineers (USACE). An MRS is a discrete location within a Munitions response area (MRA) that is known to require a munitions response. An MRA means any area on a defense site that is known or suspected to contain unexploded ordnance (UXO), discarded military munitions (DMM), or munitions constituents (MC). This data is compiled from the USACE's Geospatial MRS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) MRS dataset.
Government Publication Date: May 15, 2023

Former Military Nike Missile Sites: FORMER NIKE

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.
Government Publication Date: Dec 2, 1984

PHMSA Pipeline Safety Flagged Incidents: PIPELINE INCIDENT

This list of flagged pipeline incidents is made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types. Accidents reported on hazardous liquid gravity lines (§195.13) and reporting-regulated-only hazardous liquid gathering lines (§195.15) and incidents reported on Type R gas gathering (§192.8(c)) are not included in the flagged incident file data.
Government Publication Date: Jul 10, 2025

Material Licensing Tracking System (MLTS): MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.
Government Publication Date: May 11, 2021

Historic Material Licensing Tracking System (MLTS) sites: HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.
Government Publication Date: Jan 31, 2010

Mines Master Index File: MINES

The Master Index File (MIF) is provided by the United States Department of Labor, Mine Safety and Health Administration (MSHA). This file, which was originally created in the 1970's, contained many Mine-IDs that were invalid. MSHA removes invalid IDs from the MIF upon discovery. MSHA applicable data includes the following: all Coal and Metal/Non-Metal mines under MSHA's jurisdiction since 1/1/1970; mine addresses for all mines in the database except for Abandoned mines prior to 1998 from MSHA's legacy system (addresses may or may not correspond with the physical location of the mine itself); violations that have been assessed penalties as a result of MSHA inspections beginning on 1/1/2000; and violations issued as a result of MSHA inspections conducted beginning on 1/1/2000.
Government Publication Date: Aug 8, 2025

Surface Mining Control and Reclamation Act Sites: SMCRA

This inventory of land and water impacted by past mining (primarily legacy coal mining operations) is maintained by the U.S. Department of the Interior's Office of Surface Mining Reclamation and Enforcement (OSMRE), as it provides information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). This inventory contains information on the type and extent of Abandoned Mine Land (AML) Problems, as well as information on the cost associated with the reclamation of those problems. The data is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed. Disclaimer: Per the OSMRE, States and tribes who enter their data into e-AMLIS (AML Inventory System) may truncate their latitude and longitude so the precise location of usually dangerous AMLs is not revealed in an effort to protect the public from searching for these AMLs, most of which are on private property. If more precise location information is needed, please contact the applicable state/tribe of interest.

Government Publication Date: Oct 30, 2025

Mineral Resource Data System: MRDS

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

Government Publication Date: Mar 15, 2016

DOE Legacy Management Sites: LM SITES

The U.S. Department of Energy (DOE) Office of Legacy Management (LM) currently manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The LM manages sites with diverse regulatory drivers (statutes or programs that direct cleanup and management requirements at DOE sites) or as part of internal DOE or congressionally-recognized programs, such as but not limited to: Formerly Utilized Sites Remedial Action Program (FUSRAP), Uranium Mill Tailings Radiation Control Act (UMTRCA Title I, Tile II), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Resource Conservation and Recovery Act (RCRA), Decontamination and Decommissioning (D&D), Nuclear Waste Policy Act (NWPA). The intent of the site location is to provide a general reference point to the site on a national scale. The coordinates of each site point can be the location of a site monument, the centroid of the site boundary, or a general location of the site. This site listing includes data exported from the DOE Office of LM's Geospatial Environmental Mapping System (GEMS). GEMS Data disclaimer: The DOE Office of LM makes no representation or warranty, expressed or implied, regarding the use, accuracy, availability, or completeness of the data presented herein.

Government Publication Date: Nov 6, 2025

Alternative Fueling Stations: ALT FUELS

This list of alternative fueling stations is sourced from the U.S. Department of Energy's (DOE) Alternative Fuels Data Center (AFDC) and National Renewable Energy Laboratory (NREL). The DOE's Office of Energy Efficiency & Renewable Energy launched the AFDC in 1991 as a repository for alternative fuel vehicle performance data, which provides a wealth of information and data on alternative and renewable fuels, advanced vehicles, fuel-saving strategies, and emerging transportation technologies. The data includes Biodiesel (B20 and above), Compressed Natural Gas (CNG), Electric, Ethanol (E85), Hydrogen, Liquefied Natural Gas (LNG), Propane (LPG), and Renewable Diesel (R20 and above) fuel type locations.

Government Publication Date: Mar 11, 2026

Superfunds Consent Decrees: CONSENT DECREES

This list of Superfund consent decrees is provided by the Department of Justice, Environment & Natural Resources Division (ENRD) through a Freedom of Information Act (FOIA) applicable file. This listing includes Cases filed since 2010 limited to the following: Consent Decrees for CERCLA or Superfund Sites filed and/or as proposed within the ENRD's Case Management System (CMS); and applicable ENRD's Environmental Defense Section (EDS) CERCLA Cases with "Consent" in History Note. CMS may not reflect the latest developments in a case, nor can the agency guarantee the accuracy of the data. ENRD Disclaimer: Congress excluded three discrete categories of law enforcement and national security records from the requirements of the FOIA; response is limited to those records that are subject to the requirements of the FOIA; however, this should not be taken as an indication that excluded records do, or do not, exist.

Government Publication Date: Dec 30, 2025

Air Facility System: AFS

This EPA retired Air Facility System (AFS) dataset contains emissions, compliance, and enforcement data on stationary sources of air pollution. Regulated sources cover a wide spectrum; from large industrial facilities to relatively small operations such as dry cleaners. AFS does not contain data on facilities that are solely asbestos demolition and/or renovation contractors, or landfills. ECHO Clean Air Act data from AFS are frozen and reflect data as of October 17, 2014; the EPA retired this system for Clean Air Act stationary sources and transitioned to ICIS-Air.

Government Publication Date: Oct 17, 2014

Registered Pesticide Establishments: SSTS

This national list of active EPA-registered foreign and domestic pesticide and/or device-producing establishments is based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that each producing establishment must place its EPA establishment number on the label or immediate container of each pesticide, active ingredient or device produced. An EPA establishment number on a pesticide product label identifies the EPA registered location where the product was produced. The list of establishments is made available by the U.S. Environmental Protection Agency (EPA).

Government Publication Date: Sep 26, 2025

Polychlorinated Biphenyl (PCB) Transformers: PCBT

Locations of Transformers Containing Polychlorinated Biphenyls (PCBs) registered with the United States Environmental Protection Agency. PCB transformer owners must register their transformer(s) with EPA. Although not required, PCB transformer owners who have removed and properly disposed of a registered PCB transformer may notify EPA to have their PCB transformer de-registered. Data made available by EPA.

Government Publication Date: Oct 15, 2019

Polychlorinated Biphenyl (PCB) Notifiers: PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Aug 12, 2025

Power Plants: POWER PLANTS

This list of power plants is provided by the U.S. Energy Information Administration (EIA). The listing includes operable electric generating plants in the United States by energy source, originating from the EIA-860, Annual Electric Generator Report; EIA-860M, Monthly Update to the Annual Electric Generator Report; and EIA-923, Power Plant Operations Report. It includes all operable plants by energy source with a combined nameplate capacity of 1 megawatt or more that are operating, are on standby, or out of service for short- or long-term.

Government Publication Date: Jun 5, 2025

Historical Business Activity Risk: HIST RISK

Proprietary list of sites identified as potentially having engaged in business activity that poses a higher-than-normal risk of contamination. Records originate from historical city directories, and are included in this list based on broad business categories Potentially Hazardous Chemical Users and Fuel and Automotive, including but not limited to Dry Cleaners and Fuel Stations, Garages, etc. Inclusion in this listing does not indicate that there is or ever has been contamination; rather, sites are included in this list due to their potential for having engaged in a business activity presenting an elevated risk of contamination. The list was compiled from various city directories including Polks, Millers, Mullin Kille, Interstate Directory, and State Directory Co; spanning roughly 1920s through 1960 depending on information available by city.

Government Publication Date: Jan 1, 1960

NPDES Biosolids Program Permit Holders: NPDES BIOSOLIDS

This Water National Pollutant Discharge Elimination System (NPDES) Biosolids Permits list is sourced from the U.S. Environmental Protection Agency's (EPA) Enforcement and Compliance History Online data. EPA's Integrated Compliance Information System (ICIS) for NPDES includes facility and compliance information for NPDES permits in the ECHO Biosolids facility universe. Per the EPA, when sewage from households and businesses (and sometimes wastewater from industrial dischargers) is sent to a wastewater treatment plant, the liquids are separated from the solids, producing a semi-solid, nutrient-rich product known as "sewage sludge" or "biosolids". The EPA typically uses the term "biosolids" to mean sewage sludge that has been treated to meet the agency's regulatory requirements and is intended to be land applied as a soil conditioner or fertilizer.

Government Publication Date: Feb 7, 2026

State

Spills reported to the Pollution Control Agency: SPILLS

This listing of reported spills is maintained by the Minnesota Pollution Control Agency (MPCA). The Minn. Stat. §115.061, which has been in effect since 1969, describes the duty of people to notify the MPCA when spills occur.

Government Publication Date: Feb 23, 2026

Department of Agriculture Spills: AG SPILLS

The Minnesota Department of Agriculture Incident Response Unit is the regulatory authority of Agricultural Chemical (Ag-Chem) Incidents in Minnesota. This list contains pesticide and fertilizer incidents reported to the Response Unit. This data made available by The Minnesota Department of Agriculture, Incident Response Unit.

Government Publication Date: Nov 27, 2025

Historic spills reported to the Pollution Control Agency: HIST SPL

The Minn. Stat. §115.061, which has been in effect since 1969, describes the duty of people to notify the Minnesota Pollution Control Agency (MPCA) when spills occur. This is the list of spills reported to MPCA, and maintained by The Minnesota Pollution Control Agency (MPCA). This list was maintained till 1 Nov 2016.

Government Publication Date: Nov 1, 2016

Registered Dry Cleaning Facilities: DRYCLEANERS

The Minnesota Pollution Control Agency (MPCA) maintains this listing of registered dry cleaning facilities.

Government Publication Date: Sep 11, 2024

Delisted Drycleaners: DELISTED DRYCLEANERS

List of sites that once appeared on - and have since been removed from - the list of registered dry cleaning facilities made available by the Minnesota Pollution Control Agency (MPCA).

Government Publication Date: Sep 11, 2024

PFAS in Groundwater Samples: PFAS GW

A list of sites from the Minnesota Groundwater Contamination Atlas where Per- and Polyfluoroalkyl Substances (PFAS) were found in groundwater samples. This list is made available by the Minnesota Pollution Control Agency.

Government Publication Date: Nov 12, 2021

PFAS in Landfills: PFAS LANDFILL

A list of sites in the Closed Landfill Program where Per- or polyfluorinated alkyl substances (PFAS) have been detected. This list is made available by the Minnesota Pollution Control Agency (MPCA).

Government Publication Date: Jan 3, 2024

Clandestine Drug Labs: CDL

The Methamphetamine Laboratory Program at the Minnesota Department of Health (MDH) works to protect human health by providing technical advice on the remediation of clandestine methamphetamine production laboratories (meth labs) and decontamination of property exposed to meth lab activities.

Government Publication Date: Aug 23, 2021

Animal Feedlots: FEEDLOTS

The Minnesota Pollution Control Agency (MPCA) tracks locations of animal feedlot facilities. The locations of animal feedlots provide information and context to support decisions on animal health, land use, and maintaining environmental quality.

Government Publication Date: Aug 27, 2025

Tier 2 Report: TIER 2

A list of Tier 2 Facilities in Minnesota. This list is provided by Minnesota Department of Public Safety overseen by the Division of Homeland Security and Emergency Management.

Government Publication Date: Sep 14, 2022

Bulk Storage Permits: BULK STORAGE

The Minnesota Department of Agriculture's Licensing Information System (LIS) lists individuals or companies who hold licenses, certificates and/or permits required by state law and regulated by the Department. This database only contains those LIS licenses related to anhydrous ammonia storage facilities and bulk pesticide/ fertilizer storage facilities.

Government Publication Date: Nov 6, 2025

Tribal

No Tribal additional environmental record sources available for this State.

County

No County additional environmental record sources available for this State.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Feature Description:

The former Duluth Air Force Base was established in the early 1950's during the Korean War era. The site closed in 1982. Some of the major functions of the base included the operation and maintenance of Bomarc anti-aircraft missiles, Goose Decoy missiles, fighter aircraft, interceptors, and SAFE radar/communications. The base served to support the Duluth Missile Site near the French River, Minnesota, and the Finland Air Force Radar Station in Finland, Minnesota. The property was conveyed to the City, the Airport Authority, and to the National Guard. It is being used as an airport, for commercial and industrial purposes, and for National Guard training. Tanks, petroleum and building demolition are the subjects of the FUDS Program involvement.

Property History:

The former Duluth Air Force Base was established in the early 1950's during the Korean War era. The site closed in 1982. Some of the major functions of the base included the operation and maintenance of Bomarc anti-aircraft missiles, Goose Decoy missiles, fighter aircraft, interceptors, and SAFE radar/communications. The base served to support the Duluth Missile Site near the French River, Minnesota, and the Finland Air Force Radar Station in Finland, Minnesota. The property was conveyed to the City, the Airport Authority, and to the National Guard. It is being used as an airport, for commercial and industrial purposes, and for National Guard training. Tanks, petroleum and building demolition are the subjects of the FUDS Program involvement.

County: St. Louis
Comments: **No File**\n\nSpill occurred during an internal transfer of fuel from one wing to the other in a Northwest DC-9. Duluth Air National Guard responded and contained with pads. Clean-up is almost complete, Air National Guard has 3 - 55 gallon drums of clean-up material. Caller stated that in the past the Air National Guard has handled disposal, caller will be checking with them shortly if that will be the case again. SUPPLEMENTAL Report indicated that airport will handle disposal.
